At Los Angeles, an injunction was sought to stop the city from polluting the bay and bathing beaches with sewage discharged from the Hy-perion outlet. The State Board of Health excluded the public from the beaches on account of the danger to public health. Protection of the har-bor and bathing beaches at New York and its environs is in the hands of a joint commission representing the states of New York, New Jersey, and Connecticut. In the case of Ashland, Ohio,

the courts held that a municipality has no right to discharge sewage into a stream, while Michigan courts upheld the State sanitary commission in requiring Niles to provide sewage treatment, even though other cities discharge into the same stream. A sanitary survey of the Ohio River was completed in 1948 by the U.S. Public Health Service.

Good health conditions in war industry areas and in army camps and field operations have resulted from cooperation with the army sanitary corps and the sanitation section of the Public Health Service as well as with State boards of health. Even in jungle warfare the cases of malaria and dysentery have been kept at a minimum. At home, the emergency duties of the above section have included the operation of mobile laboratories to test water and milk supplies. To protect areas having no community facilities, and where such facilities would be overtaxed by rapid expansion of population, plans were made for protection of private water supply and the construction of septic tanks and sanitary privies.

Postwar projects for sanitary works are becomrios war projects for sanitary works are becom-ing numerous, with much attention to the smaller communities. Of such projects ready for putting into construction, 55 per cent were for sewer systems, 28 per cent for sewage treatment plants, 15 per cent for both sewers and plants, and 2 per cent for garbage and waste disposal. Promo-tion of many such projects will be sided by pretion of many such projects will be aided by pressure for reduction of stream pollution. A joint committee of technical associations has been or-ganized to assist State departments and local authorities. Its premise is that every city should have a safe water supply and should dispose of its wastes without causing offense to its neighbors. It considers that municipalities should now prepare plans, purchase sites, and arrange for financing their own projects, Federal aid being unnecessary and undesirable.

Activity is increasing in connection with housing developments, as property to be accepted by the Federal Housing Administration (q.v.) for mortgage insurance must have both water and sewerage facilities. If public utilities are available, the properties must be connected to them. Otherwise, new facilities must be designed in accordance with recommendations of the health department of the State concerned. These regularizations are concerned. department of the State concerned. These regulations apply to both individual and community properties. The FHA has no detailed requirements for garbage disposal at individual properties, but for rental housing projects it requires sanitary removal and disposal, with freedom from nuisance.

In Mexico, several communities along the Inter-American Highway are to be provided with water and sanitary services by the United States, in accordance with plans adopted by a South American convention at Rio de Janeiro in 1942. Many such projects are under way throughout South America, some assisted through the Institute of Inter-American Affairs. But in all countries many other public works precede sewerage, and relatively few cities of South America have yet reached the stage of providing such sanitary facilities. In Canada, 476 towns have at least a mile of sewers. At Toronto, a new sewage treatment plant is needed, as sewage deposited in the lake year after year is now beginning to rise and foul the beaches, making bathing dangerous to health. Design of sewage treatment plants on a regional scale has been advocated in England, in view of the cost for small communities. According to local con-

ditions, some of these regions might have small sewer systems serving plants at a number of communities, while others might have larger sewer systems serving a few large central plants.

FAIRS; PAN AMERICANISM; PUBLIC HEALTH SERV-ICE; BOLIVIA, BRAZIL, CUBA, ECUADOR, EL SALVADOR, GUATEMALA, HONDURAS, NICARAGUA, under History.

E. E. RUSSELL TRATMAN.

SAN MARINO. An independent republic in Italy, near the town of Rimini. Area, 38 square miles; population (1939), 14,545. Capital, San Marino. Chief exports: cattle, wine, building stone. Financial estimates (1939–40) were balanced at 6,009,919 lire (lira averaged \$0.0520 in 1939). The legislative power is in the hands of the grand council of 60 members elected by popular vote. Two are appointed from this council every six months to act as regents.

SANTA CRUZ DE TENERIFE. See CANARY ISLANDS. SANTO DOMINGO. See DOMINICAN REPUBLIC.

SÃO THOMÉ AND PRINCIPE. Two Portuguese islands in the Gulf of Guinea, West Africa. Area, 384 square miles. Population (1940), 60,490. Capital, square innes. Fopulation (1940), 60,490. Capital, São Thomé. Coffee, cacao, coconuts, palm oil, and cinchona are the main commercial products. Trade (1940): imports 21,327,000 escudos; exports 43,030,000 escudos (special commerce) (escudo was worth \$0.0371 during 1940). Budget (1942): 11,580,181 escudos. Shipping (1940): 89 vessels aggregating 339,638 net tons cleared the ports. Covernor, Cart. Bicardo Vog Monteire. ports. Governor, Capt. Ricardo Vaz Monteiro.

SARAWAK. See British Malaya.

SASKATCHEWAN. A prairie province in western Canada. Area, 251,700 square miles, including 13,725 square miles of fresh water. Population (1941 census), 895,992 (477,563 male; 418,429 female), comprising, by racial origin, British Isles races 397,905, German 130,258, Ukrainian 79,777, Scandinavian 68,806, French 50,530, Nethcensus): Roman Catholic 243,734, United Church 230,495, Anglican 117,674, Lutheran 104,717, Presbyterian 54,856, etc. Chief cities: Regina (capital) 58,245 inhabitants in 1941, Saskatoon 43,027, Marca Law 20,752 Prince Albert 19,502 Western Moose Jaw 20,753, Prince Albert 12,508, Weyburn 6,179, Swift Current, 5,594, Yorktown 5,577. In 1942 there were 18,159 living births, 6,173 deaths, and 7,207 marriages. Education (1940-41): 225,-463 students in schools and colleges.

Production. The gross value of agricultural output for 1942 was \$480,452,000 (field crops accounted for \$373,714,000, farm animals \$53,255,000, milk \$26,487,000, poultry and eggs \$20,973,000, fruits and vegetables \$4,079,000). Chief field crops (1942): wheat \$35,000,000 bu., oats 255,000,000 bu., barley 92,000,000 bu., rye 15,000,000 bu., flaxseed 10,500,000 bu., potatoes 204,700 tons, turnips, etc. 23,000 tons, hay and clover 537,000 tons, alfalfa 263,000 tons, fodder corn 47,000 tons. tons, attaira 263,000 tons, todder corn 47,000 tons. Livestock (June 1, 1943): 1,602,000 cattle (including 502,400 milk cows), 1,754,600 swine, 824,400 horses, 463,000 sheep, 14,873,000 hens and chickens, 889,000 turkeys. Fur output (1941–42): 3,813,447 pelts valued at \$2,245,275.

Mineral output for 1942 was valued at \$19,613,354 (gold, 173,361 fine oz., accounted for \$6,674,398, other metals \$9,345,932, non-metallics excluding fuels \$1,118,866 fuels \$1,729,521)

excluding fuels \$1,118,866, fuels \$1,729,521).

Manufacturing (1941): 945 plants, 8,546 employees, \$9,979,974 for salaries and wages, \$65,836,-308 for cost of materials, \$28,172,441 was the net value of production.

Government. Finance (year ended Apr. 30, 1942): revenue \$28,440,367; expenditure \$28,180,818; total direct and indirect liabilities (less sinking funds) \$228,471,194. The executive authority is vested in a lieutenant governor who is advised by a ministry of the legislature. In the Legislative Assembly there are 52 members elected for a five-year term by adult male and female voters. Six members (appointed for life) in the Senate and 21 elected members in the House of Commons represent Saskatchewan in the Dominion Parliament at Ottawa. Lieutenant Governor, A. P. McNab (app. Oct. 1, 1936); Premier, W. J. Patterson (Liberal; app. Nov. 1, 1935).

schools. The U.S. Office of Education estimated that 23,276,000 pupils were enrolled in the public-school systems of the United States for the school year 1943–44, a decrease of about 664,000 from 1942–43 and approximating what it was 22 years ago in 1921–22 (23,239,227). Enrollments in colleges and other institutions of higher learning numbered an estimated 1,110,500 in the fall of 1943. Estimates in public-school systems by type of school and sex are given in the following table:

|            | Number     | enrolled   | Decrea  | se  |
|------------|------------|------------|---------|-----|
| School     | 1942-43    | 1943-44    | Number  | %   |
| Total      | 23.940.000 | 23,276,000 | 664,000 | 2.8 |
| Boys       | 12,089,000 | 11,670,000 | 419,000 | 3.5 |
| Girls      | 11.851.000 | 11,606,000 | 245,000 | 2.1 |
| Elementary | 17,798,000 | 17,515,000 | 283,000 | 1.6 |
| Boys       | 9.142,000  | 8,969,000  | 173,000 | 1.9 |
| Girls      | 8,656,000  | 8,546,000  | 110,000 | 1.3 |
| High       | 6,142,000  | 5.761.000  | 381,000 | 6.2 |
| Boys       | 2,947,000  | 2,701,000  | 246,000 | 8.3 |
| Girls      | 3,195,000  | 3,060,000  | 135,000 | 4.2 |

Figures on public education, as supplied by the States for the school year 1941-42, appear in the

table at the top of the next column.

From the close of school in June, 1943, to the first of October in the same year close to 117,500 teachers changed positions. Of this total, 79,900 left the teaching profession and the other 37,600 went to other school systems. Over 10,000 male teachers and 4,800 women teachers entered the armed forces during this period.

armed forces during this period.

Higher Education. For detailed statistics and dis-

cussion, see Universities and Colleges.

Trends. To show the continual increase in the amount of education obtained by each successive class matriculation, the U.S. Office of Education compiled a study on the "survival" of pupils through the school system to high-school and college graduation

lege graduation.

Of every 1,000 pupils in the class that entered the fifth grade in 1906, only 23 were graduated from college in 1918; but of every 1,000 pupils entering that class in 1929, 71 were graduated from college. Thus, in 23 years there has been a 200 per cent increase in the holding power of the

PUBLIC INSTRUCTION IN THE UNITED STATES .

<sup>e</sup> Information supplied by the States except as noted. <sup>b</sup> Data pertains to the year 1940, as supplied by the Statistical Abstract of the United States, 1942. <sup>e</sup> Data applies to 1940−41. <sup>a</sup> This figure applicable only to elementary instructors; average figure for secondary instructors somewhat higher. <sup>e</sup> This figure includes only payments to men (city and village); average salary for women (city and village); \$980. <sup>f</sup> Exclusive of New York City, average salary including New York City, \$2.622. <sup>e</sup> Exclusive of principals, whose average salary was \$1,653. <sup>b</sup> Data applies to 1942−43. <sup>e</sup> Exclusive of principals, whose average salary was \$1,103.

schools from the fifth grade through college.

Taking the figures for results of the fifth grade through high school, of every 1,000 pupils who entered the fifth grade in 1906, only 139 remained to graduate from high school in 1914, but of every 1,000 pupils entering that grade in 1934, 440 remained to graduate from high school in 1942. Thus, during this 28-year period, the survival rate through high school increased 215 per cent. However, the 440 pupils graduated in 1942 was a lower total by 36 than the 476 graduates in 1941, showing the beginning of the effect of the war on high-school graduation.

The proportion of students entering high school

The proportion of students entering high school and remaining to graduate has followed the general trend. Of every 1,000 pupils entering high school in 1927 only 465 were graduated in 1931; but of every 1,000 entering in 1938, 549 graduated in 1942. Lastly, the proportion of pupils entering high school and continuing through graduation from college has increased steadily from 86 in 1936 per 1,000 entering high school to 94 in

1940 and 1941.

An educational breakdown of statistics from the 1940 census shows that of 85,000,000 persons who were 20 years of age or more in 1940, about

3,000,000, or 3.4 per cent, had not attended any educational institution for more than one year. Conversely, about 9,000,000, or 10.5 per cent, had completed one or more years of college. It is interesting to note that young men 20 to 24 years of age at the time of the census had spent an average of almost 11 years in school, while men who were between 40 and 44 in 1940 had averaged only eight and a half years, little more than grade school education. The white population has a consistently higher educational attainment at each age than the non-white population.

SERVICE SYSTEM.

SCIENTIFIC RESEARCH AND DEVELOPMENT, Office of (OSRD). A United States agency, established by executive order, June 28, 1941, to assure adequate provision for research on scientific and medical problems relating to the national defense. Dr. Vannevar Bush, President of the Carnegie Institution of Washington, is Director. The headquarters are located at 1530 P Street, N.W., Washington, D.C. For details of organization see 1943 Year Book.

Reports of progress and of results of OSRD activities, by reason of the nature of their subject matter, are not generally available but are held to a closely restricted distribution, primarily in

the armed services.

SECURITIES AND EXCHANGE COMMISSION (SEC). An independent agency of the U.S. Government which has the following functions: Supervision of registration of security issues and suppression of fraudulent practices in the sale of securities under the Securities Act of 1933; supervision and regulation of transactions and trading in outstanding securities, both on the stock exchanges and in the over-the-

counter markets, as provided in the Securities Exchange Act of 1934; regulation of public utility holding companies under the Public Utility Holding Company Act of 1935; supervision of indentures used in the public offering of new security issues as provided under the Trust Indenture Act of 1939; registration and regulation of investment companies and investment advisers under the Investment Company Act and the Investment Advisers Act of 1940; and the preparation of advisory reports on plans, and participation as a party, in corporate reorganizations under Chapter X of the National Bankruptcy Act. Chairman: Ganson Purcell. For 1943 activities, see Financial Review; Law; also, Electric Licht and Power.

SELECTIVE SERVICE SYSTEM. The Selective Service System was created by a law passed on Sept. 16, 1940. Its history may readily be divided into four periods. The peacetime Selective Service extended from Sept. 16, 1940, to Dec. 7, 1941, the attack on Pearl Harbor. During the first year of wartime the Selective Service System was administered as an independent organization, reporting after Apr. 5, 1942, to the War Manpower Commission in order to correlate the demands for civilian and military personnel. On Dec. 7, 1942, by Executive Order of the President, the Selective Service System was made a part of the War Manpower Commission. It operated during the year 1943 as a part of the War Manpower Commission but, by a law approved on Dec. 5, 1943, the Selective Service System was returned to its original status as an independent war agency.

Legislation. The basic law of Selective Service, approved Sept. 16, 1940, continues to be the essential characteristic of the System. It provided for the system of local boards of which there are (9,443, and of appeal boards, of which there are (1960, 28, 1943) 255, and 111 subordinate groups. All classifications of registrants are considered originally by the local boards; appeals may then be taken to an appeal board with a larger area of jurisdiction than a local board and a final appeal may be made to the President. During peacetime (1941) this law was amended, temporarily relieving men—(1) if they had a certain amount of previous military experience, and (2) if they were 28 years of age and over. The law was also amended extending the period of training in active military service to 18 months, instead of one year.

During the first year of wartime, particularly immediately after Pearl Harbor, a number of amendments were made in the law. These included removing the restrictions on the territorial use of the Army of the United States and extending the period of service or training to a period comprehending the duration of the war and six months immediately following the termination. It extended a requirement for registration to all male persons in the United States 18 to 65 years of age, and extended liability to all persons between the ages of 20 and 45. A later act further extended the liability down to persons 18 years of age, with a provision for temporary deferment of the induction of high school students. A Servicemen's Dependents Allowance Act was passed June 23, 1942, which, taken in conjunction with the Pay Adjustment Act passed a week earlier, had important

consequences on the classifications for dependency. Further increases in Army pay and liberalization of family allowances were authorized in 1943. (Public Law 33, April 10; Public Law 174, October 26.) Other legislation includes selection of institutions at which Army and Navy Training Courses are to be held (see Universities), and the clarification of deferment of high school students. Deferment may be obtained, on request, if the student is in the last half of his academic year, "until the end of such academic year, without regard to the date when such academic year ends, or until he ceases to pursue such course of instruction, whichever is the earlier."

On February 15, the Women's Marine Corps,

On February 15, the Women's Marine Corps, authorized the previous year, began to recruit. These women, with the WACS, WAVES, and SPARS, have a direct relation to Selective Service, since their numbers are counted in the total of the armed forces, and thus affect Selective Service

quota calls.

During the year 1943 a most important piece of legislation which affected Selective Service, though only indirectly, was the law for the rehabilitation of disabled veterans. This is to be administered by the Veterans' Administration (q.v.), and must be taken into account by Selective Service in administering the reemployment sections of the Selective Service law. (P.L. 16, 78th Cong., approved Mar. 24, 1943.) In the course of the year, a number of laws were passed concerning insurance, compensation, and rehabilitation, and many bills were introduced dealing with mustering-

out pay and pensions.

The first important law directly relating to Selective Service, passed in 1943, was the law relating to the occupational deferments of Federal employees. This question has been considered at various steps from the memorandum prepared by certain high Government officers, for the President, in February, 1942. At the beginning of 1943 the Bellamy Committee made its report on deferments in the Federal Government. As a result of this report, Executive Order No. 9309 was issued by the President (Mar. 5, 1943), controlling the whole problem of making requests for deferment of Government employees in the Executive branch of the Government. The Lodge-Maybank Law (approved April 8) practically gave the Executive Order statutory status regarding the Executive branch of the Government, and set up commit-tees in the legislative and judicial branches to consider deferments in those branches. Its more important provision was the directive to local boards that in a classification, reclassification, or deferment of Government employees on occupational grounds, no consideration should be given to the fact that any such persons were in the employ of the Executive, Legislative, or Judicial employ of the Executive, Legislative, or Judicial branches of the Government, unless a request, in conformity with the law, was presented by one of the Committees. The Law (Public Law 23, approved Apr. 8, 1943) so required, beginning 60 days after the Act, for a monthly report to Congress by the Director of Selective Service, giving the names and positions of all persons who had been deferred on occupational grounds (Class II-A or Class II-B) in accordance with the law.

During the entire year there was much debate in Congress on the so-called Fathers' Draft Bill, which, after many changes, became a law (P.L. 197) and was approved Dec. 5, 1943. Originally, Representative Kilday had introduced (Feb. 5, 1943) a bill providing for "categories," according to degrees of dependency. This bill had reached

the stage of hearings before the House Military Affairs Committee when Senator Wheeler introduced a different bill in the Senate (February 25), aimed to accomplish the same end. Hearings on this were held before the Military Affairs Committee of both Houses, at which high Army officials, including General Marshall and Admiral King, gave important testimony. The bill, as finally passed, orders that men "married prior to Dec. 8, 1941, who have maintained a bona fide family relationship with their families since that date, and who have a child or children under 18 years of age" shall not be inducted until all other groups, considered on a "Nationwide basis within the Nation and a Statewide basis within the State," have first been taken. This is to be done "on the basis of the best inventory available at the time of allocating calls, without affecting the usual regular and orderly flow of the Nation's manpower into the armed forces."

On Jan. 30, 1943, Local Board Memorandum No. 181 announced that "national interest will no longer permit the deferment of registrants in Class III-A where such registrants are engaged in activities or occupations which are non-deferrable." Attached was a list of such non-deferrable occupations as designated by the WMC. This so-called "Work-or-Fight" order became effective April 1, when men working in these non-deferrable industries were required to change their occupation to an essential industry within 30 days, or to be inducted. This was prohibited by P.L. No. 197, and the non-deferrable list was abolished Dec. 10,

Attached to the bill are several important amendments. Occupational deferment is now to be submitted for review and decision to the appeal board having jurisdiction over the area of the registrant's employment instead of in that of his local board. This concentration of authority in certain industrial areas has necessitated large additions of special panels of five members each to the regular appeal boards. The President is directed to appoint a commission to study the present requirements for admission to the armed forces, with the object of obtaining from the large group (3,353,052) now classified as IV-F, more men available for induction, especially for limited service. The President, on Dec. 30, 1943, appointed the Commission, naming Rear Adm. Ross T. McIntire, Surgeon General of Navy, Maj. Gen. Norman Kirk, Army Surgeon General, Dr. Alan C. Woods, Ophthalmologist-in-chief, Johns Hopkins Hospital, Baltimore, Dr. Frank H. Lahey, surgeon-in-chief, Lahey Clinic, Boston, and Dr. Edward A. Strecker, Professor of Psychiatry, University of Pennsylvania, and Medical Director of Pennsylvania, Philadelphia.

A registrant, whose induction is expected to occur shortly, must, on request, be given a pre-induction physical examination, in accordance with authorized schedules, and the result of this must be accepted by his local board. The registrant will remain in the classification assigned as the result of this examination (except for ordinary periodic reexamination), and shall report for induction in regular order. Also important is the amendment which says: "The President is authorized to delegate to the Director of Selective Service only, any authority vested in him under this act," thus removing the Selective Service System from the jurisdiction of the War Manpower Commission. Following this, the President on Dec. 23, 1943, issued two Executive Orders (Nos. 9409 and 9410). In the first the Director of Selective Service

was made a member of the board of the War Manpower Commission. In the second the Selective Service was again made a separate agency; the President delegated authority to the Director of Selective Service, but ordered the Director to con-sult with the Chairman of the War Manpower Commission on all matters dealing with the administration of Selective Service to assure coordination with the "administration of the policies and programs of the Chairman of the War Manpower Commission.

Registration. There have been seven Registrations held in accordance with proclamations by the President. The first, ordered on the same day the Selective Service Act became law, was held on Oct. 16, 1940, for all males between the ages of 21 and 36 in the continental United States, and shortly after (Oct. 26, Nov. 20, Jan. 22, 1941) for those of that age group in Hawaii, Puerto Rico, and Alaska respectively. About 16½ million persons were registered. The Second Registration, held July 1, 1941, for all youths who had become 21 since the First Registration, added about 800,-000 to those then liable to military service. Following the changed legislation, after Pearl Har-bor, a Third Registration was held on Feb. 16, 1942, enrolling an additional 8½ million persons, not previously registered, who were between 35 and 45 years of age, and also those who had now become 20 years old. On Apr. 27, 1942, the Fourth Registration registered about 14 million men between 45 and 65 (a group not subject to military service).

Although not yet liable for military service, almost three million youths between 18 and 20 were included in the Fifth Registration, held June 30, 1942. Following the legislation making 18 the age of liability, a Sixth Registration was ordered, calling for the registration between Dec. 11 and 31, 1942, of all who would reach their 18th birthday by the latter date, about half a million persons. It was further provided that, instead of any future mass registration, there should be a continuing registration, each boy to register on his 18th birthday. It is estimated that about 100,000 males reach this age each month, but that many of this group have already enlisted in the service of their choice

before they are 18. On Oct. 26, 1943, the President issued a proclamation calling for the Seventh Registration, to take place between November 16 and December 31, for all male citizens between 18 and 45 who reside outside the continental United States, and who have not already registered at some time when they have been in the United States. Registration for those who become 18 hereafter is to

continue as prescribed above.

The grand total of those registered (between 18 and 45) shows a national military manpool of about 30 million persons, and about 14 million others (between 45 and 65). A decision by the armed forces, following identical letters from the President to the Secretary of War and Secretary of Navy (Dec. 5, 1942), for the present, decrees that men over 37 years of age are not acceptable, thus reducing the military pool by about 7½ millions. This decision may be changed at any time without formal legislation.

Classification. After men are registered, the next step in the Selective Service process is classification, which is done basically on a comprehensive questionnaire filled out by each registrant. Additional information may be submitted, and claims for deferred classifications may be made by the registrant himself or by other interested parties.

Registrants are placed in one of the four main divisions, then are assigned specifically to the socalled classes, Class I, available for training and service; Class II, temporarily deferred because of occupation; Class III, deferred because of dependency; Class IV, deferred for miscellaneous rea-

At the beginning of 1943 the following classes were in effect:

Class I.A: Available for Military Service
Class I.A:O: Available for Noncombatant Military Service
(Conscientious Objector)
Class I.G: Member of Land or Naval Forces of the U.S.
Class II.A: Necessary in his Civilian Capacity
Class II.B: Man Necessary in War Production
Class II.G: Engaged Regularly in and Necessary to Agriculture

Class II-C: Engaged Regularly in and Recessary to Agriculture
Class III-A: Deferred by Reason of Dependency
Class III-B: Deferred both by Reason of Dependency and
because engaged in Essential War Production
Class III-O: Deferred both because of Dependency and because Engaged in Agriculture essential to War Effort
Class IV-A: Aged 45 or over; Man Who has Completed
Military Service
Class IV-B: Official Deferred by Law
Class IV-C: Aliens not Acceptable for Training and Service

cce Class IV-D: Minister of Religion or Divinity Student Class IV-E: Available for civilian Work of National Im-portance (Conscientious Objector) Class IV-F: Physically, Mentally, or Morally Unfit Class IV-H: Deferred as Over Age, Unacceptable to Army

During 1943 instructions about limited service classifications were changed several times. At present no specific designation of this sort is given by the local boards, but at the time of the induction examination men may be accepted and as-

signed to limited service.

For a short period in 1941 men over 28 were given the Classification I-H. After Pearl Harbor no more such classifications were assigned, and the classification itself was abolished Nov. 19, 1942. After men of 38 were deemed unacceptable for service they were at first given a classification IV-H, but since May 1, 1943, this has been discontinued, and all men in IV-H were ordered classified anew. To indicate the fact that a registrant is between the ages of 38 and 45 he is now identified by the addition of the letter "(H)" following his classification for example: Class lowing his classification, for example: Class I-A(H), II-B(H), IV-F(H). IV-A continues to be assigned to registrants who become 45 years

The principal changes made in the classification

system during 1943 were as follows:

Class II-A now means necessary in the war effort, which includes war training programs. II-B, while continuing to mean necessary in war production, now implies a much stricter interpretation of necessary. Federal Government employees must go through a special procedure (as described above) to entitle them to either Class II-A or II-B. Classes II-C and III-C, unlike other deferments which last at most for six months, last as long as the man remains engaged in agriculture.

Class III-B was eliminated Apr. 12, 1943. No III-A classifications have been assigned since Dec. 11, 1943, and those now in III-A are to be reclassified as available for service (I-A, I-A-O, IV-E), or, according to their occupation (II-A, II-B, III-C), or into a new classification, III-D (created Apr. 12, 1943), defined as "Man deferred by reason of extreme hardship and privation to wife, child, or parent."

Classification Now in Force

Class I-A: Available for military service Class I-A-O: Available for noncombatant military service;

conscientious objector
Class I-C: Member of land or Naval forces of U.S.
Class II-A: Man necessary in support of war effort
Class II-B: Man necessary in war production

Class II-C: Man deferred by reason of his agricultural

Class II-C: Man deferred by reason of his agricultural occupation or endeavor
Class III-C: Man deferred both by reason of dependency and agricultural or occupational endeavor
Class III-D: Man deferred by reason of extreme hardship and privation to wife, child, or parent
Class IV-A: Man deferred by reason of age
Class IV-B: Official deferred by law
Class IV-C: Aliens
Class IV-C: Aliens
Class IV-C: Available for work of national importance; conscientious objector

conscientious objector Class IV-F: Physically, mentally, or, morally unfit

Induction. The Selective Service Act provided that men be inducted into the Army under the quota system, on the basis of the actual number of men in the various territorial subdivisions, who are liable for training and service but who are not deferred after classification. In fixing the quotas, credit is to be given for residents of the subdivision who were already members of the land or naval forces, and for those who subsequently volunteered for service. Executive Order No. 9279 of Dec. 5, 1942, prohibits all branches of the armed forces from accepting as volunteers any man between 18 and 38, and prescribes that no men in that age group "shall be inducted into the enlisted personnel of the armed forces except under provisions of the Selective Service Act of 1940." Thus Selective Service becomes the sole procurement agency in this age group.

The original limitation on the total number to be inducted (900,000 in peacetime) had been removed after war was declared, and monthly quota calls were greatly increased. On the basis of requests from the armed forces State quotas are assigned, and these again are allocated locally. When the men are delivered to the local induction center, they may express a preference for a particular branch of the armed services, and, after considering the particular qualification of each man to be inducted, an attempt is made to relate these requests to the current needs of each branch. Recent controversy on the "size of the Army" revolves around how many men can be taken into this general pattern with the least possible disturbance to war production, while maintaining essential ci-

vilian activities. In the summer of 1943 the Army announced a reduction in the estimate of its total needs by about half a million men, but the Navy has steadily increased its calls. On Aug. 21, 1943, General Hershey wrote to the local boards: "There have been inducted or enlisted in the Army or Navy approximately 10 million men." Over a six-months' period (July 1-Dec. 31, 1943) calls through Selective Service, actual and estimated, averaged about 300,000 per month. The reduced estimate of the Army called for 7,700,000 men by the end of 1943, but largely because of the uncertainty about the status of "father" many local boards failed to meet their quotas for the last three months of the

Future needs will be conditioned by variable factors, such as the length of the war, the number of casualties, and the number of rejections at induction centers. Testimony of General Marshall and Admiral King before the Senate Military Affairs Committee (Sept. 20, 1943) aimed to show that global strategy is based on the assurance of an uninterrupted flow of properly qualified replacements. To insure this, the quota calls for January, 1944, come to about 300,000 men. To secure this number, even after all present classifications are reviewed, which should result in making available more men from IV-F and also from the group now deferred for ocupational reasons in both private and Federal employment, it has been officially announced that almost half a million fathers will have to be inducted.

The problems attendant upon the induction of a few thousands each month in the last part of 1940, when civilian life was little affected by war conditions, and the problems of 1943, when the monthly calls sometimes approached half a million, while the demands for manpower in war production continued to increase, have many differences, but few changes have been necessary in the Selective Service System. In general, the same local boards and appeal boards, the same lawyers, doctors, and dentists continue to give freely their time and effort. There is good reason to believe that the statement made a year ago in the Gallup Poll remains true: "Virtually no one interviewed thought the draft boards were not trying to do an

honest and conscientious job."

Conscientious Objectors. The problem of the conscientious objector has been recognized from the start. The Selective Service Act states: "Nothing in this Act shall be construed to require any person to be subject to combatant training and service in the land or naval forces of the United States who, by reason of religious training and belief, is conscientiously opposed to participation in war in any form." The decision for classification of conscientious objectors rests, as in the case of other classifications, with the local boards. There are two types of objectors, those who are willing to render noncombatant service and are assigned to Class I-A-O, and those unwilling to render any kind of military service, and who are placed in IV-E. These, instead of being inducted, are, in accordance with the Act, "assigned to work of national importance." At the induction stations all are given the same type of examination as that given to all other registrants, and those who fail are placed in IV-F. Those in I-A-O are assigned to service in the Medical Department, which does not require the use of arms.

The numbers involved are constantly changing, but there have never been at any one time many more than 10,000 who are classified as IV-E, representing a trifle less than .04 per cent of the total number of registrants. These figures do not give an exact picture of the number of those who have conscientious objections against war. The objector, like all other registrants, may be entitled to defer-ment on the grounds of occupation or dependency, and until or unless such deferment is cancelled, the issue would not be raised. The objector re-ceives the same treatment as all other registrants. For instance, since men over 38 are no longer acceptable to the armed forces, the same age group of conscientious objectors is at present exempt from service.

The Selective Service System has established in its National Headquarters a Camp Operations Division, which assigns Class IV-E men to camps and projects of "national importance," and over which it maintains supervision. The number and variety of these projects show great increase. At the end of 1942 there were 66 in operation; during 1943, 16 of these were discontinued; the present number in operation is 99. Federal funds are used in two of these projects (178 men), and in some units working on Weather in the Geodetic Survey; all others are financed by the different religious groups, who maintain a central administrative office for the purpose. None of the men receives compensation, beyond very small sums for laundry, and other incidental expenses, and whenever possible, each individual pays \$30 per month for his own maintenance. Transportation and incidental

expenses involved in going to the camps is borne by the Federal Government.

In December, 1943, there were 6,789 men at the 99 "Camps." Of these 3,750 were in actual work camps run by the Department of Agriculture; 1,303 were assigned to projects under the Department of Interior, such as work in the National Parks, Reclamation Bureau, Fish and Wildlife Service; 1,358 were working as attendants in mental hospitals—a project steadily expanding; 103 were in agricultural experiment stations; 58 with the Department of Commerce (Geodetic Survey, Weather Bureau, etc.); 68 were on Public Health projects; and 149 engaged in miscellaneous enterprises endorsed by this special division of Selective Service. This miscellaneous group includes 83 working under the auspices of the National Research Council, and allowing themselves to be used as "human guinea pigs." One unit is living under certain conditions while infested with body lice, the purpose being to experiment with anti-typhus measures; another unit is drinking sea water in an effort to determine how much may be taken without harmful effect; a third group is engaged in experiments in nutrition.

Since the camps were initiated, about 1,100 men have been discharged for reasons of health or age. About 500 have admitted a change in their attitude toward war, and after discharge from the camps have been reclassified by their local boards

in Î-A-O, I-A, or I-C.

Contrary to popular impression, conscientious objectors are not confined to a few religious denominations. Those now at the Camps come from 141 different groups. The three well recognized sects, the Mennonites, Society of Friends, and the Church of the Brethren number 2,477, 579, and 911 respectively. There are 202 Jehovah's Witnesses, but there are also 577 Methodists, 162 Baptists, and 104 Catholics.

Delinquents. Selective Service Regulations define a delinquent as "a man liable for training and service under the provisions of the Selective Training and Service Act of 1940, as amended, who fails or neglects to perform any duty required of him under the provisions of the Selective Service Act of 1940, as amended, and regulations made

pursuant thereto."

On Jan. 4, 1943, it was announced that all registrants between 18 and 45, in any age group which had been subject to registration for military service for at least six months, must after February 1, always carry with them both their registration certificates and their classification cards. Beginning November 1, all men (18 to 38), who are subject to Selective Service, but are delinquent, will be classified into Class I-A immediately, and ordered to report for induction. Delinquents who do not respond to such orders will be reported to U.S. attorneys for prosecution under the Selective Service Act, which provides a maximum fine of \$10,000 or five years in prison, or both, for persons who violate provisions of the law or rules and regulations promulgated thereunder.

A general round-up by the FBI has been in process since November 1, and about 90,000 persons held for questioning, approximately three-tenths of 1 per cent of all registrants. Technically, many more than that might be deemed guilty at any one time, since many seemingly trivial omissions are yet in the eyes of the law reasons for considering a man delinquent. For instance, failure to return questionnaires within ten days, failure to keep the local board informed promptly of any

change of address or change of status (marriage, divorce, birth or death of dependents, change of occupation) render a man delinquent, as well as failure to register or to report for physical examination or for induction.

Although there has been considerable newspaper comment on delinquents or "draft dodgers," the problem has never assumed any considerable proportions. Selective Service Regulations have met with general approval, and the decentralization of the administrative machinery has taken the law enforcement into small units where the status of each individual is known, and evasion is unlikely

to be condoned.

Law Enforcement. During the second year of the war, the courts made it increasingly clear that they would not interfere with Selective Service operations. Attempts to secure judicial review of classifications prior to induction were unsuccessful, and the scope of review after induction was further limited. The constitutionality of the Conscientious Objector program was upheld. Vigorous enforce-ment of the Act is apparent from the fact that 4,422 convictions were obtained as against 2,847 for the first year of the war. The total convictions since October, 1940, became 7,895. Jehovah's Witnesses accounted for 1,407 of the convictions during the year and for 1,893 of the convictions since October, 1940. The FBI started with 44,644 Selective Service cases on Nov. 30, 1942, closed out 90,506 cases during the year, and had 39,372 cases pending on Nov. 30, 1943. Since Oct. 16, 1940, the FBI has closed a total of 171,165 cases. Under the special Selective Service parole provisions 444 violators of the Act were recommended for parole by the Director of Selective Service. Of these, 359 were recommended for induction into the land or naval forces, 64 for assignment to Civilian Public Service Camps for conscientious objectors, and 21 for special service to be designated by the Attorney General. During the year, 124 special local boards were established in Federal and State penal and correctional institutions for the purpose of processing inmates of such in-stitutions other than violators of the Act. Out of 5,261 men placed in Class I-A as available for military service, 2,126 were sent to induction stations and 1,075 were inducted into the land or naval forces.

See Federal Bureau of Investigation; Law under War Decisions; Prisons; Psychiatry; United States under Armed Forces.

LEWIS B. HERSHEY.

SENATE, U.S. The membership of the U.S. Senate at its assembly on Jan. 10, 1944, is shown in the accompanying list. Political affiliation may be determined by the following, with the number of members in parentheses: Democrats in roman (58); Republicans in *italic* (37); Progressives in SMALL CAPS (1); no vacancies; total, 96. Senator Frederick Van Nuys, Democrat from Indiana, died on January 25 and Samuel D. Jackson was appointed to fill out the unexpired term. On Feb. 8, 1944, Sinclair Weeks was appointed to succeed Henry Cabot Lodge, Jr. (of Massachusetts) who resigned, Feb. 4, 1944, in order to go on active duty with the U.S. Army. (For activities, see United States.)

SEYCHELLES. A British colony in the Indian Ocean, northeast of Madagascar. It comprises a group of 92 islands (the largest are Mahé, 55 sq. mi. and Praslin, 15 sq. mi.). Total area, 156 square miles. Population, 32,150 on Jan. 1, 1941. Capital, Victoria, on the island of Mahé. Statistics for 1940: Births, 839; deaths, 365; marriages, 153; imports, Rs1,090,076 (rupee averaged \$0.3016 in 1940); exports, Rs1,180,895; shipping, 336,941 tons entered in 1939. Total revenues for 1942 were estimated at Rs761,962; expenditures, Rs715,229. Copra, cinnamon, essential oils, guano, and fish are the principal products. Administration is in the hands of a Governor, assisted by executive and legislative councils. Governor, William M. Logan (app. Jan. 5, 1942).

shipbuilding. A review of merchant shipbuilding records in the United States for 1943 shows that few large shipyards were established and that shipbuilding activities were concentrated in yards operating in 1942. Thus 1943 has been largely a ship-production year, while 1941 and 1942 were devoted to the establishing and equipping of yards and the getting together of organizations to build ships. The controlling Federal agency in the United States for merchant-ship construction is the Maritime Commission (q.v.).

In Canada, the building of ships is under the control of the Wartime Merchant Shipping, Ltd. One of the designs developed is of a small cargo vessel of about 4,700 tons deadweight, many of which have been built and are engaged in coastwise and trans-Atlantic service. Another design is of a larger ship similar to the Liberty type of the Maritime Commission, with Scotch boilers and

triple expansion engines.

Great Britain has turned out several standardized cargo vessels, which in general are like the U.S. Liberty, except that the British types are coal burners. Prime Minister Winston Churchill in an address before the House of Commons, on Sept. 21, 1943, stated, "The output of new building from the United States has fulfilled all that I ever hoped from it and more. We build our regular quota in these islands, and the Canadian output, an entirely new development for Canada, is remarkable. The credit balance of new building over losses for all times, including marine risks since the beginning of the year—the net gain, that is to say—exceeds 6,000,000 tons, and should the present favorable condition hold, we shall soon have replaced all the losses suffered by the United Nations since the beginning of the War."

Ship Construction. All merchant shipbuilding under the control of the Maritime Commission is now related to war activities. The commercial vessels designed and built for, or under the supervision of, the Maritime Commission have been largely standardized, and include cargo vessels, tankers, barges, lighters, and towboats. Of these, the largest orders have been placed for cargo ships; the new Victory

of 1943 is faster than the Liberty.

Victory ships have nearly completely welded hulls and are driven by geared turbines, steam being furnished by water tube boilers. The keel of the first Victory ship was laid on November 28, and is scheduled for launching Jan. 16, 1944. Contracts for about 300 of them have been awarded. Data on Victory and Liberty ships follow:

|                    | Victory       | Libertu   |
|--------------------|---------------|-----------|
| Length             | 455 ft.       | 441.5 ft. |
| Beam               | 62 ft.        | 57 ft.    |
| Deadweight tonnage | 10,800        | 10,800    |
| Cargo tonnage      | 9,146         | 9,146     |
| Decks              | 3             | 2         |
| Engine H. P        | 6,000 or over | 2,500     |
| Propulsion         | Geared        | Triple    |
|                    | steam         | expansion |
|                    | turbines.     | engine.   |
| Speed              | 15 knots.     | 11 knots. |

Several hundred Liberty ships were completed in 1943; the one thousandth Liberty ship, viz, Robert Lowry, was put in commission May 25, 1943. Next in importance to cargo ships are tankers,

Next in importance to cargo ships are tankers, contracts for large numbers of which were placed with Pacific and Atlantic Coast yards, as well as those on the Gulf. Most of them were along general lines of previous designs, with changes made in hull construction and machinery installations that were found to be desirable. Contracts were awarded for small coastal tankers, and for 4,000-ton (deadweight) ocean-going Diesel-driven ships, to yards on the Great Lakes, and on the Atlantic and Pacific coasts.

Because of the demand for tonnage of all kinds early in 1943, particularly for the shipment of oil, orders were placed for more than 100 concrete barges. However, as by early summer the acute demand for such barges had passed, the original orders were reduced. To serve cargo ships and tankers when in port, many towboats, wood barges, and lighters were built for the Maritime Commission. Some of the towboats were for ocean service, others for harbor use; particularly all for both purposes were driven by Diesel engines.

Since most of the craft mentioned above were designed of steel, and were urgently needed, welding procedures for rapid construction were given considerable study by the Maritime Commission, the American Bureau of Shipping, and shipyards. This was particularly true after the tanker Schenectady, built at a Pacific coast yard, suddenly cracked and sank at her dock. The reason for this was laid to a variety of causes, but greater care has since been exercised in welding, with the result there have been no further accidents of this kind to tankers or to cargo ships. Automatic arc and oxy-acetylene welding ap-

Automatic arc and oxy-acetylene welding apparatus are on the market for the fabricating of tank tops, decks, and large surfaces of steel plates. Flush joints on shell plating are now common practice, as with them frame liners are not required, nor is it necessary to joggle plates or frames. With lap joints no edge preparation of plates is necessary, as it is with flush. Arc stud welders are now extensively employed for fastening studs to steel decks, thus replacing through bolts for wood deck fastenings. Other applications of arc welded studs are for cable hangers and straps for supporting ventilation ducts, piping, and fiber glass insulation. Oxy-acetylene cutting flame is now used for preparing plate edges for welding, and for cutting plates in straight lines, circles, and irregular shapes. Another use is the removing of rust and scale from steel before painting.

Further developments were made in 1943 in the mass production of ships by assembly-line methods (see below under *Production*). But the remarkable rate at which ships were turned out

would not have been possible without welded construction and the standardization of designs. In fact, one yard, the Oregon Shipbuilding Co., Portland, Ore., launched 24 Liberty ships in September, 1943. In the east, the Bethlehem-Fairfield Shipyard, Baltimore, Md., claimed an Atlantic coast record with the launching of the Liberty ship Edith Wharton in 21 days.

ship Edith Wharton in 21 days.

Marine Engineering. Boilers, turbines, Diesel engines, and their auxiliaries have been improved in the past year. Designs have been changed where necessary to secure higher efficiency and improved manufacturing methods. Simplification of design and standardization conserved materials and made faster machining and assembling in shops possible. For instance, from a study of the types of geared turbines it was found that the previous number of 27 could be reduced to 9. Similarly, turbine-generator sets for power and light were cut from 77 to 17.

The trend for boilers is the continued development of high pressure water tube, with superheaters, oil fired. For such boilers there is on the market combustion control equipment with which excellent operating efficiency is secured; they are superior to Scotch boilers for modern high-speed merchant vessels. Boiler feedwater systems are now installed, so there are only a few degrees difference in temperature between the feedwater and the water in the boiler. With such systems boilers will generate more steam per pound of fuel burned and thus increase the steaming radius of a vessel.

Turbines for ship drives were improved in design and construction, as also were reduction gears. Large orders were placed for turbines and reduction gears for installation in cargo ships and in tankers. Turbine electric drives consisting of a turbine-generator unit furnishing current to an electric propulsion motor have been ordered for many tankers. The best efficiency of a high speed turbine is obtained from this electric drive, and the propeller run most economically when operated on a low speed propulsion motor. But for steam-operated cargo ships, a turbine driving the propeller through reduction gears is a simpler form of drive and is generally preferable to a turbine electric.

With boilers equipped with superheaters supplying high pressure superheated steam to turbines, it was necessary to modernize piping systems, as previous designs of valves and fittings, and the materials used in them, would not do. To meet high-pressure high-temperature steam requirements resort was had to either alloy steel pipe with special flanged joints, or to alloy steel pipe with welded forged steel elbows, tees, and other fittings. Because of limited room in ships, frequently making welding impossible, flanged joints are installed instead of welded. Welded pipe lines have advantages such as a saving in weight (for no flanges, bolts, nuts, and gaskets are required) and freedom from leaky flanges. When several ships are built off the same drawings, steam, oil, and other piping systems can be fabricated by an outside contractor and shipped to the yard for installation. This procedure was followed on many Maritime Commission ships, speeding up their construction.

speeding up their construction.

Improvements have been made in Diesel engines, which also have been standardized for rapid building. Large single Diesels driving the propeller direct through shafting have been installed on cargo vessels and tankers. Another arrangement suitable for ships engaged in certain trades

is to have two or more comparatively small high-speed Diesels propel the ship through reduction gears and electro-magnetic couplings. Some ships have four high-speed Diesels, others two. Diesel electric drives have been installed in ferryboats and towboats. Such drives are particularly suited where speeds are frequently changed, as from full speed ahead to full speed astern, as may be necessary when a towboat is docking a vessel. The exhaust from a Diesel engine is now utilized in waste heat boilers for heating the ship and for other purposes.

Besides the large number of turbines and Diesel engines ordered by the Maritime Commission, the Commission made studies of steam engines, on which quicker deliveries could be obtained than on turbines and Diesels. From these studies, an engine was designed having greater power than those in the original Liberty ships, and it will be installed in several contracted for in 1943. During the past year, 13 plants were building steam turbine propulsion machinery, 11 were building steam engines for Liberty ships, and over 8, Diesel engines

Production. Increased production of merchant vessels in the United States has been brought about by reducing the number of types, standardizing designs, and streamlining assembling methods. Prior to work in the yard, arrangement drawings of a ship are gone over by the production manager and yard superintendent, who mark the hull into sections and outline the steps to take in their fabrication. The size of a section largely depends on the crane capacities of the yard, and the ease with which sections can be handled. Each consists of plates and shapes welded together in different parts of the yard. After assembling it is taken to the building way where it is joined by welding, or if this is not practical then by riveting, to adjacent sections. Frequently bulkheads are completely assembled and then lowered in their proper position in the hull.

As sections are large, bulky, and heavy, it is evident that, when eight or ten ships are being built at the same time, a large land area is required, with a deep water front. Some yards, on the Great Lakes and in Southern States, for example, are so located that it is desirable to build vessels parallel to the water front and sidelaunch them. However, most yards on the Atlantic and Pacific coasts build vessels that are launched stern first, as by so doing less water

front is needed.

Stem, stempost, rudder post, and other heavy castings and forging are purchased by the yard, as are boilers, turbines, condensers, pumps, Diesel engines, and mechanical and electrical equipment, so a yard building standardized ships has now developed into an assembling plant. The laying out of a ship, plus the writing of specifications, necessitates the employment of a large number of naval architects, marine engineers, hull and engine draftsmen. Besides these, production men are required to plan the placing and delivering of orders so that work in the yard will go on continuously without workers waiting for materials and equipment. The technique and procedures followed in many United States shipyards have resulted in turning out Maritime Commission standardized ships at a rate that a year or so ago would have been thought impossible. It has been demonstrated that a ship can be prefabricated to such a degree that it can be assembled on the ways and launched in four days.

The Maritime Commission announced in March, 1943, that United States yards had increased pro-

duction to five ships a day. This goal was attained two months ahead of schedule, and represents an annual production of 18,000,000 deadweight tons. The volume of production is about 51 per cent for the West Coast yards, 37 for East Coast, and 12 for Gulf. Approximately 40 per cent more tankers were delivered in the first seven months of 1943 than during the entire year 1942.

At the semi-annual meeting of the American Bureau of Shipping, New York, on July 27, 1943, President J. L. Luckenbach reported: "Production of merchant types of sea going vessels over 2,000 gross tons in the United States during the first six months of 1943 has more than equaled the output for the entire year of 1942. The unprecedented volume of merchant vessel completions in the first six months of 1943 includes 65 tankers of over 1,000,000 deadweight tons, and 696 cargo vessels of almost 7,350,000 deadweight tons, plus five large vessels of the combined passenger and cargo type. Of the cargo ships, 608 were of the emergency Liberty ship type, and the balance were of the higher speed C-1, C-2, and C-3 basic design cargo ships. Thus, cargo ships and tankers are now being produced at twice the rate averaged in 1942, when 652 freighters were finished, of which 542 were Liberty ships and 61 tankers."

of which 542 were Liberty ships, and 61 tankers."

It is estimated that in 1944 approximately 2,000 commercial vessels will be built in the United States, having a total tonnage of 21,000,000 does not shall be suited by the states, and the specific shall be the fast Victory ships, and the remainder Liberty ships, tankers, coastwise vessels, and the combination passenger-cargo C type developed by the Maritime Commission for peacetime service.

Maritime Commission for peacetime service.

The second anniversary of Victory Fleet Day was celebrated Sept. 27, 1943, with appropriate ceremonies at shipyards and allied plants. In September, 1941, when the Patrick Henry slid down the ways as the first Liberty ship (see photo in Year Book for 1941) there were 21 shipyards with about 100 ways employed in the ocean-going merchant shipbuilding program. In October, 1943, approximately 70 yards, with more than 300 ways, were delivering more than five ships a day. These yards are expected to step up production still further so as to deliver six ships a day. Two years ago the industry employed about 200,000 men. Late in 1943, over 900,000 men and women were employed in shipyards alone, and more than a million others in plants throughout the United States were producing materials for ship construction. (See also Shipping under Labor.)

SHIPBUILDING STABILIZATION COMMITTEE. See SHIPPING under Labor and Training.

SHIPPING. During 1943 the Maritime Commission and War Shipping Administration continued to operate or control matters relating to commercial overseas shipments, and to cooperate with Army and Navy activities. In Canada, there functioned the Park Steamship Co., Ltd., that supervises and controls the operating of cargo vessels built in Canada. It operates along similar lines to the War Shipping Administration, as does also the British Ministry of War Transport. To coordinate operations of the War Shipping Administration and

British Ministry of War Transport, there was established the Combined Shipping Adjustment Board by President Roosevelt and Prime Minister Churchill in January, 1942, which continued through 1943 in the pooling of tonnage for military and other purposes. See Maritime Commission.

Rear Admiral E. S. Land, U.S.N. (retired) chairman of the War Shipping Administration in an address on May 22nd (Maritime Day) stated that "Judicious allocation of tonnage is one of the prime considerations of the Administration. In February, 1943, the record showed that 42 per cent of our dry cargo tonnage had been allocated to Army operations, 13 per cent to Navy, 30 per cent to Lend-Lease, and 15 per cent devoted mainly to maintaining our essential civilian economy and that of our territories and possessions, and in service of our neighbors in South and Central America. In other words, there was 16 per cent of the tonnage of this nation devoted to civilian use." From data compiled by the American Merchant

Marine Institute of New York, United States merchant ships are carrying almost as much cargo in one month as during an entire year of the First World War. The largest monthly total in the first year of the First World War was 450,000 tons, whereas in the first full month of the present war, 1,500,000 tons were carried. Of the number of vessels loaded with lend-lease materials, the War Shipping Administration announced that 1,375 had sailed to Great Britain, 304 to Russia, and 66 to

China in the year ending Oct. 31, 1942.

The replacement of outstanding vessel charters with new contracts was taken up with operators in May by the War Shipping Administration. From conferences it was decided that new contracts for bare boat and for time charter will carry lower rates. The annual Maritime Day edition of the N.Y. Journal of Commerce published the maximum freight rates on bulk and general cargoes tabulated by routes and commodities. The rates subject to revision by war conditions apply to all vessels operating under the jurisdiction of the War Ship-ping Administration. The sale, transfer, and charter of vessels without the prior approval of the Office of Defense Transportation or the War Shipping Administration was prohibited by joint action of these two agencies in July, 1943.

Materially lower freight rate surcharges on petroleum, petroleum products, and other liquid cargo shipments into and between foreign areas were announced early in September, 1943, by the War Shipping Administration. The surcharges, effective September 22, covered various bulk liquid cargoes being transported over many sea routes. Fourteen of the new rate schedules apply to petroleum, two to liquid caustic soda, and one each to molasses, creosote, benzol, and liquid wax. A sharp slash was made in the rate on cargoes of petroleum from the Netherlands West Indies and U.S. Gulf ports to the Portland Pipe Line and to Halifax, Nova Scotia. The reduction in these surcharges reflects the generally improved conditions

in the various trade areas involved.

Postwar shipping activities were given considerable attention during the past year. The Maritime Commission organized a committee to make further studies of shipping routes and types of ships required for them. The American Merchant Marine Institute prepared a plan, the major points in which were: (1) Ultimate transfer of all government-owned merchant vessels to private owners; (2) seizure of Axis trade routes for the United States; (3) creation of a reserve shipping pool of at least 5,000,000 deadweight tons to be kept idle for future emergencies; (4) increased participation by the United States in foreign, tramp, and indirect shipping, particularly in carrying American goods abroad; (5) continuation of the Maritime Com-

mission's expansion program.

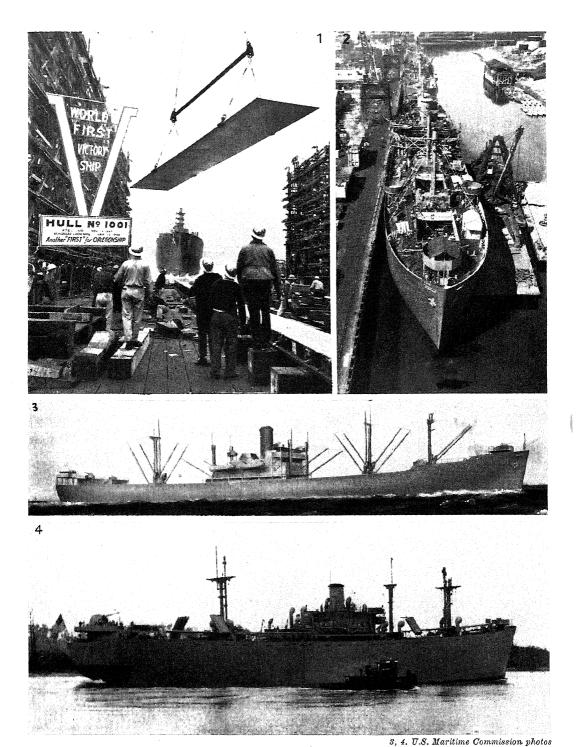

Shipping on the Great Lakes, because of ice, was nearly a month late in getting started in 1943. The late start was a serious handicap in the handling of the 94,000,000 tons of ore set by the Office of Defense Transportation as the quota from the mines in Minnesota to the steel mills on Lakes Michigan and Erie, and to the Pittsburgh district. Notwithstanding unfavorable spring conditions, large ore and coal shipments were made on the Great Lakes that compare favorably with those of previous years. The Lake Carriers Association, Cleveland, Ohio, reported that during the month of October a total of 11,612,542 gross tons of iron ore were transported via the Great Lakes, bringing the 1943 total, to November 1, to 76,784,357 gross tons. Coal shipments for the season to November 8 totaled 41,042,286 net tons. The fleet of American bulk freighters has been increased in 1943 by the completion of 16 large vessels built for the account of the Maritime Commission and subsequently sold to Great Lakes operators. One ore carrier was lost in 1943 so that the net addition to the fleet was 15 ships.

Marine Losses and Insurance. The number of Allied merchant ships sunk by German, Italian, and Japanese submarines and aircraft is a war secret. However, it is known that the activities of German submarines in the North Atlantic Ocean, and on routes to South America and the Far East, have been materially curtailed. This has been brought about by improved convoy methods, including use of aircraft carriers, specially designed escort vessels, torpedo boat destroyers, and land based aircraft. Little authentic information has been published by Germany, Italy, and Japan on their merchant vessel losses. Secretary of the U.S. Navy Frank Knox, in September, 1943, gave out figures on Japanese losses which showed that Japan has about 5,000,-000 tons of merchant shipping left, of a prewar total (December, 1941) of 6,300,000. The replacement capacity is estimated at approximately 800,-000 tons annually, so the net yearly Japanese loss in ship tonnage is from 700,000 to 1,000,000 tons.

In regard to Allied sinkings, for military reasons the location and time of a sinking are never reported. The Truman Committee of the U.S. Senate stated on April 21, 1943, that approximately 12,-000,000 tons of Allied shipping were sunk in 1942, which was more than the total tonnage built by the United States and Great Britain. Of the total built, the United States turned out 746 merchant ships, having a tonnage of 8,090,000. Considering these figures with improved convoy methods, increased losses of and decreased building of German submarines due to air raids, plus the speed at which ships are now built in the United States—the trend is decidedly in favor of the Allies.

Prime Minister Winston Churchill in an address before the House of Commons, on Sept. 21, 1943, said "that for the four months which ended September 18th, no merchant vessel was sunk by enemy action in the North Atlantic. The month of August was the lowest month we have ever had since the United States entered the War, and was less than half the average of British and Allied sinkings in the fifteen months preceding the American entry into the War. In the first fortnight of September no Allied ships were sunk by U boat action in any part of the world."

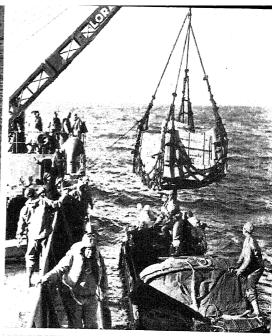

The Division of Insurance of the War Shipping

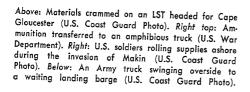

## SHIPBUILDING-LIBERTY MODEL AND VICTORY MODEL

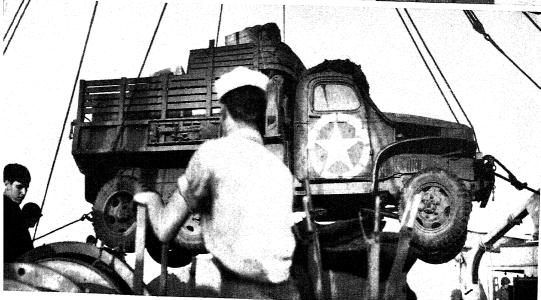

1. The 296th Liberty Ship, launched from the Oregon Shipbuilding Corporation Yard as the first keel plate was lowered for the first Victory Ship, the S.S. *United Victory*. 2. Scene at the outfitting Basin, where ships are taken after being launched (Oregon Shipbuilding Corporation). 3. Artist's preview sketch of the Victory Ship, showing the finer hull lines of the new model. Mass production was under way in the fall with deliveries expected in the summer of 1944. Speed will be 15 knots or more as compared with 11 for the older Liberty Ship, shown below (4).

PROBLEMS OF SHIPPING TO DISTANT BATTLEFRONTS

Administration issued Revision 2, to General Bulletin 10, which covered additional regulations for war risk insurance on lives of merchant seamen. The revision provides insurance in excess of that provided by ship owners. On March 2, 1943, the Senate passed the shipping omnibus bill, that gives insurance coverage for vessels in which the United States has an interest, and raises expenses and commissions allowed insurance carriers reinsuring

with the War Shipping Administration. In March, 1943, the War Shipping Administration announced the publication in the Federal Register of General Order 6, Revised, which incorporates the original General Order 6 and its nine supplements in a single document and gathers together for the first time the current rules and insurance regulations of the Division of Wartime Insurance for the underwriting of war risk insurance on cargo, hull, crew, fishermen, and freight interests. The new General order also contains important new material. Concurrently with the publication of this General Order, two new rate schedules were announced covering shipments of cargo.

In respect to the special risk or facultative cargo war risk insurance policy, provision has been made for automatic attachment of insurance at an intermediate port of call of the vessel if the insurance premium is not paid until after the sailing of the vessel from the port of loading; also, provision is made to incorporate in the policy the standard of commercial practice called for by the law under

which such insurance is written.

To the open cargo war risk insurance (Warship-opencargo Policy), a "Black List Warranty" has been added and a provision inserted in the policy incorporating the standard of commercial practice called for by the law authorizing the writing of such insurance. The definition of "imports" is so changed that insurance covering a shipment of cargo bound for United States ports remains valid and continues to cover if, after attachment of the risk, the destination of the vessel is changed to a

port outside the United States.

The regulations now also provide for a new form of Individual War Risk Life Insurance Policy covering seamen, enabling seamen to purchase additional insurance in excess of the policies furnished by the War Shipping Administration to crews of its vessels. This policy in general follows the pat-tern of the "Second Seamen's War Risk Policy," modified to reflect the fact that premiums are paid by the seamen. The procedure for procuring such insurance has been modified so that seamen may make application for the insurance through the operator of the vessel, captain of the vessel, or a

shipping commissioner.

The War Shipping Administration also announced publication of its Cargo Rate Schedules C-16 and C-17. The former, covering exports from the United States, embodied certain reductions for long voyages. The latter schedule, which became effective Apr. 1, 1943, excludes from noncompensatory rates a substantial number of commodities with respect to which this form of subsidy will no longer be available. Such commodities will, however, continue to be accepted for insurance at the higher rates named in the schedule and are not excluded from coverage under the Open Cargo

War Risk Policy.

Labor and Training. It is estimated that the employment of men and women in United States shipyards will reach at least 1,500,000 by Jan. 1, 1944. This number is remarkable, when it is considered that five years ago, only about 100,000 were employed. Many activities such as light welding, run-

ning machine tools, and painting, are now done by women. In fact, a yard located at Portland, Ore. has 30 per cent women employees, a percentage nearly reaching the average British level of 35. Equally rapid increases of personnel have been necessary in the loading and operating of ships. In industries that have grown as rapidly as shipbuilding and shipping, disputes frequently arise between members of the same and other trades,

and also with the management.

To prevent disputes and work stoppages, meetings of a labor and government agency viz., Shipbuilding Stabilization Committee of the War Production Board, were held in March, 1943. The Committee was made up of, six members of the Metal Trades Union (A.F.L.), six from the Industrial Union of Marine and Shipbuilding Workers (C.I.O.), twelve management representatives, and seven from Federal agencies including War Department, Navy Department, Maritime Commission, and War Production Board, a representative of the Board being chairman. The Committee established sub-committees to handle matters relating to absenteeism, grievances, annual wage

review, and workers productivity.

The War Shipping Administration and the Maritime trade unions completed in December, 1943, 18 months of wartime operations together. The collective bargaining agreements between operators and unions will continue for the duration of the war, not only on the ships which were under the operators on the declaration of war, but on ships built since. The Statements of Policy guaran-tee that the system of hiring remains as in the bargaining agreements. Officers and men must be procured by the general agents upon the terms and conditions prevailing in the services in which the vessels are to be operated. Thus all agents of vessels holding contracts with Maritime unions will pro-

The Maritime Commission has played an important part in centralizing requests for deferment of active merchant seamen, and in keeping local draft boards informed of the employment status of seamen for which draft deferment has been obtained. Deferment has been requested by the Maritime Commission for merchant seamen between the ages of 18 and 38; the Commission has been able to prevent the arrest or induction of many seamen who had been earlier classified as delinquent by

cure their men through hiring halls.

the local draft boards.

Besides the training schools previously established by the Maritime Commission (see 1943 Year Book) many shipyards organized classes for men and women, where welding, plan reading, and other subjects were taught. Yards also offered em-ployees prizes of Victory bonds or cash for suggestions on increasing ship production. The Maritime Commission awarded flags and buttons to yards and workers having outstanding records in building ships. Captains, engineers, and crew were given bonuses on voyages to some ports in danger zones, and when their ships were exceptionally well handled.

SHIPSHAW PROJECT. See Canada under History. SHOCK THERAPY. See PSYCHIATRY.

SHOE INDUSTRY. See HIDES, LEATHER, AND SHOES.

SHOOTING. America's crack marksmen saw plenty of action in 1943, but their targets were more important than those one usually associates with the sport of shooting. The shortage of ammunition for home-front consumers considerably reduced competition on our rifle, trap, and skeet layouts, but the Grand American championships were held at Vandalia, Ohio, with a number of new title winners emerging from the forty-fourth annual contests. The richest prize of all, that for the Grand American Handicap, was captured by Jasper Rogers of Dayton. The 35-year-old toolmaker won the blue ribbon event in a shoot-off with five rivals. Each man broke 97 out of 100 targets in the regular contest at 18 yards then Rogers shattered 47 of the extra 50 to win.

tered 47 of the extra 50 to win.

Miss Skipper Winski, 17-year-old high school girl of Wellsburg, W.Va., led the women with a score of 97 out of 100 at 17 yards. Herschel Cheek, police chief of Clinton, Ind., was the all-around winner, and Rudy Etchen, Chicagoan, repeated in the national doubles. The Great Eastern, high spot of skeet shooting for the last 14 years, was

canceled.

SHORTLAND ISLAND. See British Solomon Islands. SHORT STORIES. See Literature. SIAM. See Thailand.

sierra leone. A British West African colony (256 sq. mi.) and protectorate (27,669, sq. mi. including those parts of the colony treated as protectorate). Total area, 27,925 square miles. Population (1931 census), 1,768,480, including 96,422 in the colony. In 1940 the total population was estimated at 2,000,000, including 121,100 in the colony. Freetown, the capital (80,000 inhabitants in 1940), has one of the best harbors in West Africa and is an important naval base. Education (1941): 255 schools and average attendance of 15,136.

Production and Trade. Kola nuts, palm oil and kernels, ginger, rice, groundnuts, piassava, cassava, hides, diamonds, gold, iron ore, platinum, and chromite are the chief products. Trade (1941): imports £3,814,391 (£2,502,631 in 1940); exports £1,592,608 (£2,147,816). The chief exports were palm kernels, iron ore, gold, chrome ore, ginger, and piassava. Coal, petroleum, tobacco, textiles, apparel, hardware, and provisions were the main imports. Roads (1940): 998 miles. Railways

(1942): 311 miles.

Government. Finance (1942): revenue £1,500,000; expenditure £1,300,000. Net public debt, Dec. 31, 1941, £1,288,259. The colony and protectorate are administered by a governor, assisted by an executive council. There is a legislative council of 23 members (including the Governor as president) which legislates for both the colony and the protectorate. Governor and Commander in Chief, Sir Hubert Stevenson (app. July 5, 1941).

SILVER. In addition to playing its usual role as a political bone of contention, silver in 1943 played an important part in the war program. Early estimates that 139 million oz. would be required for essential industrial uses in 1943 turned out to be about 39 million oz. too high. Less essential uses, such as jewelry and silverware, were held to approximately 30 million oz. Although the use of silver for aircraft engine bearings is of great importance and is increasing, original estimates that 25 to 35 million oz. would be required for this use during the year proved to be excessive.

Production estimates were more accurate. Early predictions—that about 40 million oz. of domestic silver would be produced during the year and that 20 million oz. of silver would be imported in the form of ore and base bullion for refining in this country for the last half of 1943—approximated actual figures. The U.S. Bureau of Mines' estimates for the continental United States and Alaska placed 1943 production at 41,373,000 oz., compared with 1942 production of 55,859,658 oz.

As in 1942, when it produced 14,644,890 oz., Idaho was the leading silver producing State. A severe labor shortage reduced its total production, which averaged approximately one million oz. per month. Utah replaced Montana as the second largest producer, although Montana was a close third. Both States produced less than in 1942 when Montana's production was 11,188,118 oz. and Utah's 10,574,955 oz. Arizona, in fourth place, also failed to reach its 1942 total of 7,064,467 oz. Other producing states were Colorado, Nevada, California, Washington, New Mexico, Texas, and minute amounts came from Oregon, South Dakota, and Wyoming. Alaska, because of severe curtailment of gold mining operations, produced only about 40 per cent of its 1942 total of 119,704 oz.

Handy and Harman, silver brokers, estimated that Canada produced 18,500,000 oz. in 1943; Mexico, 87,000,000 oz.; and Peru, 16,000,000 oz.

Because of virtual cessation of gold mining activities by War Production Board order L-208, domestic mining of silver occurred almost entirely because of its presence in base metal ores. Idaho production came principally from lead-zinc mines with the exception of the famous Sunshine Mining Co. and the Coeur d'Alene Mines Corp., where it was produced in conjunction with antimony. Utah's production came from mines producing zinc and lead. Montana and Arizona silver was a by-product of copper mines. Operations of Desert Silver, Inc., at Nivloc, Nev., one of the few mines which produced silver almost exclusively, were shut down in mid-year.

The effort to make available to industry "free silver" from the U.S. Treasury were finally successful in July, 1943, when the Green silver act became law. Halted in December, 1942, by a filibuster by Senator Pat McCarran of Nevada, who objected to the proposed sale price of 50 cents an oz., the bill was revised to carry a sale price of 71.11 cents an oz., and in this form it was passed. By subsequent War Production Board order, silver sold by the Treasury for consumption by industry may only be used for war purposes. Only silver will be sold which does not represent backing for currency, although Congress agreed

to let silver used for nonconsumptive industrial purposes, such as electrical bus bars and transformer windings, be used for monetary backing. By December, about 25 million oz. had been authorized for consumption by essential industry under the Green act. It has been proposed to allow the Treasury Department to repurchase sur-plus inventories of Treasury silver remaining in the hands of industry at the close of the war.

Silver requirements for coinage in the Middle East, India, and elsewhere, due to increased war activities and the presence of large numbers of troops, has increased tremendously. During the first eleven months of 1943, the United States lend-leased 40,897,000 oz.

Greatly increased use of silver alloys for brazing, which made possible a swift, continuous, cheap method of joining metals sufficiently flexible for large-scale or short-run production, consumed large quantities. In September, the WPB prohibited further use of foreign silver for this purpose, making it necessary to use the more expensive do-mestic product. Throughout the year, use of silver was regulated by WPB order M-199.

SKATING. Miss Gretchen Merrill, 17-year-old Boston Skating Club star, won the highest award in figure skating when she placed first in the women's senior event at the 1943 national championships held in Madison Square Garden, New York. Miss Dorothy Goos, the junior queen of 1942, was runner-up. Arthur (Buddy) Vaughn, Jr., of the Philadelphia S.C. took the men's senior contest and Miss Doris V. Schulbach and Walter Noffke of the Springfield, Mass., Ice Birds defended their senior pairs title. Other champions were Edward Le Maire, New York, junior men; Miss Hildegarde Balmain, New York, junior women, and Miss Marcella May and James Lochead, Jr., of San Francisco, senior dance

More sparkling than the amateur championships were the professional shows, Sonja Henie's Hollywood Revue, Ice Follies, and Ice Capades, that played to near-capacity crowds on their tours from

coast to coast.

Miss Carmelita Landry of Fitchburg, Mass., and Dick Werner of Paterson, N.J., proved the big stars in speed skating. Attractive Miss Landry won the Middle Atlantic and New York State outdoor titles and Werner duplicated her feat in addition to winning the Eastern States meet. Miss Helen Carlesco of Jackson Heights, L.I., was the Eastern States women's champion.

THOMAS V. HANEY.

SKIING. There was plenty of snow in 1943, but little skiing, with most of our top-flight competitors in the service and wartime travel restrictions keeping

thousands away from winter playgrounds.

Intercollegiate skiing just about filled the competitive picture. New Hampshire's team won the Lake Placid Club's twenty-second annual games, replaced Dartmouth as Intercollegiate Ski Union champion, and placed first in the Middlebury Carnival. The I.S.U. title games were run off in conjunction with Dartmouth's thirty-four annual contests. Capt. Mo Distin of the Hanoverians took

the college downhill and cross-country laurels as well as the downhill and combined jump and langlauf at Middlebury. Artie Devlin placed first in the Roosevelt Trophy jump held at Bear Mountain State Park.

Miss Rhona Wurtele of Westmount, Quebec, captured the slalom and combined honors in the international races between Canadian and Eastern United States women at Lake Placid. The downhill race was won by Miss Paula Kann, 21-year-old North Conway, N.H., star.

SKYTRAIN, SKYTROOPER. See AERONAUTICS under American Transports. SLOAN FOUNDATION. See PHILANTHROPY under Foundation Activities.

SLOVAKIA. A former province of the Czechoslovak republic, proclaimed an independent republic by the provincial parliament on Mar. 14, 1939, and taken under German protection by a treaty signed Mar. 18, 1939. Capital, Bratislava.

Area, Population, etc. Exclusive of territories ceded to Hungary and including areas transferred to the republic by Germany from Poland, Slovakia has an area of 14,848 square miles. The population at the census of Dec. 15, 1940, was 2,654,000, excluding German armed forces in Slovakia and 85,000 Slovak workers then employed in Germany. Some 2,000,000 of the inhabitants were Slovaks. German, Jewish, Hungarian, and Ruthenian (Ukrainian) minorities formed the remainder of the population. Bratislava, the chief city, had a population of 170,668 in 1935. The live birth rate in 1941 was 24.1 per 1,000 inhabitants; death rate,

Production. Agriculture and forestry are the chief occupations. Industry, mining, and commerce are of secondary importance. Estimated production of the chief crops in 1941 was (in metric tons): Wheat, 315,500; barley, 265,000; rye, 200,000; oats, 208,500 in 1940; corn, 84,000; potatoes, 1,667,-600; beet sugar, 57,400 in 1940-41; linseed, 1,100; hempseed, 1,800; flax fiber, 1,700. Wool output in 1940 was 400 metric tons. Mineral production in 1941 was reported by the Slovak press as follows (in metric tons): Iron ore, 978,000; coal, 816,300; manganese ore, 82,000; antimony ore, 19,400; copper ore, 122,400; precious metals, 105,-000; salt, 10,000; petroleum, 24,000 in 1940.

Foreign Trade, etc. Merchandise imports in 1941 ere valued at 3,491,000,000 Slovak crowns (2,872,000,000 in 1940); exports, 3,182,000,000 crowns (3,175,000,000 in 1940). (One Slovak crown equaled 0.0860 reichsmarks or \$0.0344 at the official exchange rate.) Germany supplied 1941 imports to the value of 1,496,000,000 crowns (Bohemia and Moravia, 1,087,000,000) and purchased exports valued at 918,000,000 crowns (Bohemia and Moravia, 1,357,000,000).

Budget estimates for 1942 placed total receipts at 2,187,000,000 crowns; expenditures, 3,247,000,-000 crowns. The cumulative budget deficit for the years 1940–42 inclusive was about 2,863,200,000 crowns. Railways in 1940 extended 1,580 miles. Military roads constructed by the Germans during 1939–42 considerably extended the inadequate

highway network.

Government. The Slovak People's party, led by Josef Tiso, a Roman Catholic priest, adopted fascism of the Nazi variety as its ruling principle and imposed it upon Slovakia when the province obtained regional autonomy within the Czechoslovak republic in November, 1938 (see 1938 YEAR BOOK, p. 201). Following the declaration of independence and the acceptance of German protection, a new constitution making Slovakia an authoritarian "Christian National Republic" was adopted by the one-party parliament on June 21, 1939. The Constitution provided for a parliament of 80 members elected by the people for five years from a one-party list; a President elected by Parliament; and a National Council of 22 members exercising wide executive and legislative powers through its chairman, acting as Premier.

The National Council was composed of 6 representatives appointed by the President, 10 of the Slovak People's party, and 6 of the corporative civil service, labor, and commerce organizations. President in 1943, Josef Tiso (elected Oct. 26, 1939); Premier, Bela Tuka. The Constitution recognized the Slovak National, or Hlinka, party (successor to the Slovak People's party) as the sole legal

political party.

Under the Slovak-German treaty of Mar. 18, 1939, Slovakia agreed to permit German military occupation of its frontier districts along the Polish border, to "organize its own military forces in close collaboration with the German armed force," and to "conduct its policy in close collaboration with the German Government." A German-Slovak military agreement ratified Aug. 18, 1939, placed the Slovak military forces under German command and authorized German military occupation of the entire country (see Year Book for 1939, p. 182 f.). Slovak forces joined in the German invasion of Poland on Sept. 1, 1939, and in the German attack upon the Soviet Union beginning June 22, 1941. The Slovak puppet Government adhered to the German-Italian-Japanese military alliance on Nov. 24, 1940, and signed the Anti-Comintern Pact on Nov. 25, 1941 (see Axis Powers). It declared war upon the United States in December, 1941. For 1943 developments, see below.

History. The position of Pres. Josef Tiso's Nazified puppet government deteriorated rapidly during 1948 as the prospect of German victory faded. The regime was narrowly based upon the pro-German Slovaks affiliated with the Hlinka party and upon Nazi elements among the German minority in Slovakia. When the conviction spread that Hitler had lost the war, opposition groups became more open

in their defiance.

The anti-Nazi agitation among the Slovaks took the form of guerrilla warfare in some isolated districts, discontent and occasional mutinies among troops mobilized for service on the Russian front, and mounting criticism of the Tiso regime and its collaboration with Berlin. On August 27 a group of Slovak leaders in Bratislava were reported to have written Tiso demanding the repudiation of his pro-German foreign policy, withdrawal of Slovak troops from Russia, dismissal of the pro-Nazi Premier, Bela Tuka, restoration of political democracy, and the closest possible collaboration with the Czechs.

Nazi organs repeatedly complained of the growing influence of President Eduard Benes and the Czechoslovak Government in exile in London (see Czechoslovakia under History). In a pastoral letter read in all Catholic churches on March 21, seven bishops of the Roman Catholic Church vigorously protested oppressive governmental decrees "affecting great masses of our fellow-believers as well as our countrymen . ." They urged "that civil rights and protection be afforded by the State to all citizens regardless of their race and nationality" and that baptized Jews be accorded all Christian rights.

The United Nations Information Office in New York revealed in April that notwithstanding Tiso's status as a Roman Catholic priest, many of the Slovak clergy had been thrown into concentration camps, that all monastic orders had been dissolved and their property confiscated, and that other extensive Church holdings had been seized by the Germans. The Slovak Lutheran Church likewise protested against the Nazi principles and activities of the Government and its dependent organizations. An unsatisfactory reply led the Lutherans to institute a boycott of the Hlinka organizations.

There was mounting tension between anti-Nazi Slovaks and the German minority led by Franz Karmasin, who because of his support in Berlin was called the real dictator of Slovakia. Karmasin complained that the morale of many Germans as well as Slovaks had been undermined by "enemy propaganda." But despite all opposition, the Slovak Nazis and the Germans proceeded with their Berlininspired program for the Nazification of Slovakia. On February 8 Sano Mach, the strongly progerman Interior Minister of the puppet government, declared that 20,000 Jews, all that remained of the 90,000 Jews originally living in Slovakia, would be deported to Eastern Poland within the next few months whether or not they had been baptized as Christians. A June report of the Czechoslovak Press Bureau stated that only 5,000 unbaptized and 11,000 baptized Jews were still in Slovakia. Meanwhile German economic penetration continued apace through the acquisition of Jewish properties and other measures.

SLOVENIA. See YUGOSLAVIA. SLUM CLEARANCE. See NATIONAL HOUSING AGENCY. SMALL BUSINESS SECTION. See ANTITRUST DIVISION.

SMALLER WAR PLANTS CORPORATION. An emergency war agency of the U.S. Government, which reports through the War Production Board; created by act of Congress on June 11, 1942, with a capital stock of \$150,000,000, for the most effective utilization of small business concerns in the war effort. Management is vested in a board of five directors appointed by the chairman of the WPB. The Corporation is empowered to make loans to small business concerns, to purchase or lease land, plants, equipment, or supplies for sale or lease to small concerns, and to enter into procurement contracts with the U.S. Government, On Mar. 18, 1943, the WPB Smaller War Plants Division was transferred to the Smaller War Plants Corporation. Chairman: Albert M. Carter, Acting.

smithsonian institution. An organization founded in 1846 according to the terms of the will of James Smithson of England, who in 1826 bequeathed his entire estate to the United States of America "to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." The "increase of knowledge" is accomplished through scientific research and exploration.

The usual program of explorations has been curtailed, owing to wartime conditions, and the few field expeditions that were carried on in 1943 were concerned in the main with the war or with commitments dating back to the prewar period. The policy of the Institution has been to use all its resources to aid in winning the war, while continuing insofar as possible the recording and publishing of essential scientific observations and such curatorial work as is necessary for the proper care of the National collections. All re-

search projects not necessary for the orderly resumption of cultural activities after the war have been suspended for the duration with one exception, namely, those activities related to a closer cultural cooperation with the other American re-

The Institution's major contribution to the war effort has consisted in furnishing urgently needed and often hard to get information regarding obscure peoples and places to the Army, Navy, and war agencies. More than a thousand recorded inquiries had been answered up to the close of the fiscal year. The Institution joined with the American Council of Learned Societies, the Social Science Research Council, and the National Research Council in sponsoring the Ethnogeographic Board, a non-governmental agency whose function is to act as a clearinghouse between the above institutions and other scientific and educational organizations throughout the country, and the Army, Navy, and war agencies within the Government. The Smithsonian War Committee, appointed in 1942, has met regularly to consider plans to increase the Smithsonian's contribution to the war effort, and upon its recommendation, a number of wartime projects have been carried out. A number of research and consultation projects connected with war problems have come to the Institution through the Ethnogeographic Board and the War Committee, as well as through contacts of various officials of the Smithsonian.

In the field of inter-American cooperation, the Handbook of the Indians of South America has been brought practically to completion; the first part of a "Checklist of the Coleopterous Insects of Mexico, Central America, the West Indies, and South America," a long-needed tool for entomolo-gists, prepared under the direction of Dr. R. E. Blackwelder, is being printed; and an Inter-American Society of Geography and Anthropology has been organized, with membership open to scien-tists anywhere in the hemisphere, and with more than 700 members already enrolled from nearly

all countries and both continents.

The "diffusion of knowledge" is carried on by publication of the results of scientific researches and exploration. During the war, however, publication has been restricted largely to material that relates to the war or is of value in strengthening cultural relations with the American nations to the south of us. A new series entitled "Smith-sonian War Background Studies" was begun in the summer of 1942 for the purpose of making available authentic information on the less wellknown areas and peoples involved in the war.

There have been issued 17 papers in this series. During the year 188 publications were issued, and 194,057 copies were distributed to libraries, educational institutions, and individuals. Outstanding among these were "Compendium and Description of the West Indies," by Antonio Description of the West Indies," by Antonio Vázquez de Espinosa, translated by Charles Upson Clark, a detailed itinerary of Spanish America written by a Carmelite missionary in 1628 or 1629; "Fishes of the Phoenix and Samoan Islands Collected in 1939, during the Expedition of the U.S.S. Bushnell," by Leonard P. Schultz, curator of the division of fishes of the National Museum, who accompanied the expedition; and "The Na-tive Tribes of Eastern Bolivia and Western Matto Grosso," by Alfred Métraux. The Smithsonian Meteorological Tables and the Smithsonian Mathematical Tables were also reprinted to supply the increased demand for these tables, in large part from war agencies.

The Smithsonian administers the following bureaus which are supported by Congressional appropriations: The United States National Museum, National Collection of Fine Arts, Bureau of American Ethnology, International Exchange Service, National Zoological Park, and Astrophysical Observatory including the Division of Radiation and Organisms. It also administers the Freer Gallery of Art. The National Gallery of Art was established as a bureau of the Institution but is administered by the Board of Trustees of the Gallery (See ART.).

The expendable income of the Institution for 1943, consisting of income from investments, income from miscellaneous sources, and gifts for special objects (excluding income from the Freer endowment) was approximately \$273,000. Its endowment fund (exclusive of the Freer endowment) amounted to \$2,642,923. The Secretary is Charles G. Abbot, D.Sc.; the Assistant Secretary, Alex-

ander Wetmore, Ph.D.

SOCIALISM. The year 1943 saw some progress by socialist parties, notably in Canada, but it brought forth no organized socialist movement as a factor in the struggle for a socialist peace. On the contrary that "revolution," preferably "by consent," which Harold Laski had once argued was a necessity for victory, no longer could be presented in any such aspect. Obviously the Big Four were winning without it, and their conduct in Africa, Italy, and Europe, and their promises or lack of promises for Asia, made it increasingly doubtful how much socialist revolution of any sort any of them, even Stalin, might desire or permit. The masses themselves were still too much repressed under the weight of war to give a clear indication of their stand. Nevertheless, the vigor of socialist revival in Italy after the fall of Mussolini and the persistent courage of socialist elements in the underground movement in Europe gave proof of the vitality of the socialist idea. There was no revival of a formal socialist internationalism and the rest of the story can best be told under the headings of different nations.

In the United States 1943 was an off year in politics. Jasper McLevy was, as usual, reelected Mayor of Bridgeport, Conn. His Connecticut Socialist Party remained unaffiliated with the national organization. In Reading, Pa., the socialists elected their candidate, J. Henry Stump, who had formerly been Mayor of the city. They also voted in favor of reaffiliation with the national organization, with which they had cooperated in elec-tions. The Party nationally indicated its intention of making every effort to run a Presidential campaign in 1944 despite the greatly increased difficulties of getting any minor party on the ballot in many States. Its issues would be a peoples' peace and socialist reconstruction. It reiterated the desire to help in the organization of some such mass party as the Canadian Cooperative Federa-

In Canada the C.C.F. made astonishing gains with a socialist program strongly backed by both the farmers and labor but not controlled by the bloc voting of a few powerful labor unions as is the British Labor Party. In provincial elections in Ontario it became the second party, increasing its representatives in the legislature from 0 to 34. It increased its representation in the federal Parliament by capturing two seats in by-elections.

Elsewhere in the western hemisphere there were no important socialist developments. In Argentina, both before and after the Ramirez coup d'état, Socialists were very active in agitating for the restoration of civil liberties and parliamentary democracy. In Chile Socialists continued in the coalition cabinet. Their advocacy of an emergency measure imposing drastic controls on private capital in the fall of the year led to a fight within the Democratic Alliance but it was still preserved.

On the European continent the only parliamentary elections were held in Switzerland, where the Social Democratic Party won 56 seats out of the total of 194 in the National Council (parliament), becoming the largest single party. This success led it to revive its campaign for membership in the Federal Council of seven in which it was still

unrepresented.

In occupied Denmark the Social Democratic Party stiffened its resistance to Nazi demands and ordered all its members absolutely to boycott public meetings arranged by pro-Nazis or anti-democrats. Socialists were active in all phases of the opposition to Nazi rule which followed the German

declaration of martial law in Denmark.

In Sweden the Government, predominantly Social Democratic, while it continued its policy of neutrality, felt itself able sharply to strengthen its resistance to German demands. Thus, it welcomed thousands of refugees from Denmark and other occupied lands, vigorously protested specific Nazi outrages against the peoples of Norway and Denmark, and refused longer to permit the Germans to send war materials and furloughed soldiers to Norway via Sweden. A Committee to revise the Social Democratic platform of 1920 concluded its work during the fall and made plans for submitting the proposed platform to the Party Congress in May, 1944.

In Finland the Social Democratic Party re-

In Finland the Social Democratic Party remained the largest single party with 85 out of 200 Parliamentary seats. It also held 4 seats in the coalition cabinet. In February, 1943, President Risto Ryti, following his reelection, asked the socialist leader, Viano Hakkila, to form a cabinet. Since he was unsuccessful in obtaining the cooperation of the Agrarians he declined the Premiership, but Socialists accepted representation in the Cabinet. In the fall, the Social Democratic Finance Minister, Viano A. Tanner, urged "an honorable permanent peace" with the U.S.S.R.

(See FINLAND.)

In general, in the occupied countries Socialists cooperated with the underground movements and continued their representation in such governments-in-exile as offered it to them. Cooperation with Communists was greatly hindered not only in Europe but throughout the world by Stalin's announcement early in the year of the summary execution, late in 1942, of the outstanding socialist and labor leaders, the Polish Jews, Victor Alter and Herman Ehrlich, on the monstrous charge that these flaming anti-Nazis had connived with Nazi forces.

French Socialists were represented at the Provisional Consultative Assembly meeting in November in Algiers by five members of the last French Parliament and three representatives of

the reconstituted French Socialist Party. As this is written there is no definite word of the fate, in Germany, of Leon Blum and other prominent Socialists held prisoners by the Germans. They are probably still alive. We have already referred to socialist activity in Italy, where Socialists are making common cause with other democratic groups in demanding the complete abdication of the

House of Savoy.

In the British Commonwealth of Nations, socialist parties scored successes not only in Canada but in New Zealand and Australia. In New Zealand in September, 1943, the Labor Party Government under Prime Minister Peter Fraser, and Vice-Premier Walter Nash, was returned to power in the first federal election in five years, but by a reduced majority. It still held a clear majority of 44 representatives against a combined opposition of 37. It refused to include in the Cabinet members of the opposition on the ground that the country had approved its own program rather than that of its Nationalist opponents. This program included advocacy of expanded government housing and more radical social security plans than that Party had formerly advanced. New Zealand Communists, while critical of the Labor Party, decided to support it in the elections. Mr. J. E. Lee, who had been expelled by the Labor Party, formed a new group called the Democratic Labor Party, which failed to elect any candidate. After the elections the War Cabinet approved a 10-year plan for increased development of the national hydroelectric organization. In November the Party representatives urged the Government to push a program for the greater socialization of industry, vacations with pay for all workers, "equal pay for equal work," and the establishment of a minimum family income.

In Australia the Labor Party in August won a great electoral victory. Not only did it increase its representation in Parliament by 13 votes, thus establishing a clear majority, but also it won a majority in the new Senate which will take office in July, 1944. John Curtin remains Prime Minister and he interpreted the results of the election as a mandate for a wholly labor government rather than a coalition government, for which his opponents asked. There were no striking developments in new social legislation, but the Government, through a ministry of postwar reconstruction, established in December, 1942, appointed various commissions to draw up plans for reconstruction in industrial and rural areas. A meager dispatch dated December 18 reported that the triennial conference of the Labor Party had unanimously approved a charter "that marks a complete break with Labor's long-standing tendency toward isolationalism and exclusionism."

The British Labor Party continued on its course without any important change. At the official Party Conference in June, 1943, the majority voted to continue the electoral truce with the Conservative and Liberal Parties; it urged support of the Beveridge Plan, and again rejected the application of the Communist Party for affiliation, thus distinguishing between that Party and the Russian masses for whom there is a very strong feeling of friendship among British workers. The Conference resolution on the treatment of Germany, a compromise declaration, pointed more than former declarations or the later declaration of the Trade Union Conference in the direction of "Vansittartism," that is, the responsibility of the whole German people rather than the Nazi Party for the war. George Ridley, Editor of the Railway

Service Journal, was elected Chairman of the Party, and Arthur Greenwood, acting leader of the Parliamentary Labor Party, was elected Treasurer over Herbert Morrison, Home Secretary in Churchill's Cabinet. Much later in the year Mr. Morrison suffered a defeat in the Party when the Party Executive Committee dissociated itself from his action in releasing the British Fascist leader. Sir Oswald Mosley, from long detention in jail, on the score of health. It should be remembered that Sir Oswald had never been indicted and was held under a drastic emergency act permitting the Government to detain individuals without benefit of habeas corpus.

The Trade Union Congress at its fall meeting, under Socialist leadership, demanded a minimum of four decencies: a decent job, a decent home, a decent social security scheme, and a decent edu-cational opportunity for all British children.

In general the British Labor Party continued to adopt good resolutions, and its leaders to make good speeches, about the future. In the opinion of this writer it has, however, thus far failed to rise to its opportunity as trustee for the unorganized democratic socialist sentiment of the world. It has made no vigorous fight in the Cabinet, Parliament, or the country against a continuing British imperialism. It made a weak fight for the Beveridge Plan. These things plus the electoral truce probably explain the growing popularity, at least temporarily, of the new Common Wealth Party led by Sir Richard T. D. Acland, which is pushing vigorously, although on non-Marxist lines, a more comprehensive socialist pro gram than the official Labor Party urges. The small Independent Labor Party which is definitely to the left of the Labor Party also continues to have an influence beyond its Parliamentary strength.

SOCIAL PROTECTION COMMITTEE AND DIVISION. See FEDERAL SECURITY AGENCY. SOCIAL PSYCHOLOGY. See PSYCHOLOGY.

SOCIAL SECURITY BOARD (SSB). The Social Security Act, which provided for the establishment of the Social Security Board, was passed in 1935 and amended during 1939. Its principal purpose is to relieve the misfortunes that come when earnings are cut off by lack of work, old age, blindness, or death; and when children are deprived of parental support or care. The Social Security Board has direct administrative responsibility for the Federal old-age and survivors insurance system, and cooperates in the administration of the Federal-State employment security and public assistance pro-

The Federal old-age and survivors insurance system provides monthly insurance payments for workers and their families when the wage earner is 65 years old or over and stops work or when he dies. A lump-sum payment may be made if an insured worker dies and leaves no dependents entitled to monthly benefit payments for the month in which he died. The amount of the payments is based on the worker's own wages from jobs covered by the system and is paid as a right, regardless of what other resources he may have. The cost is shared by workers and their employers, who pay special taxes which go into a fund in the U.S. Treasury, out of which benefits are paid.

During the calendar year 1943, over \$155,000,-000 was certified for payments of monthly bene-

fits and \$17,830,000 was certified for lump-sum death payments. The number of individuals receiving monthly benefits as of Dec. 31, 1943, was nearly 748,000 with a monthly benefit rate of nearly \$13,510,000. Of the total number of beneficiaries, 306,000 were retired wage earners, 92,000 were wives aged 65 or over, 229,000 were children under age 18, 70,000 were widows having children under 18 in their care; the remainder were parents and aged widows of deceased workers, principally the latter.

About 75,000,000 individual workers' accounts have been set up by the Social Security Board. Many persons who had not previously worked in jobs which would make them eligible for benefits under this insurance system are now acquiring rights to such benefits as a result of increased in-

dustrial employment due to the war.

It is estimated that at least a half million older insured workers are staying on the job instead of claiming their retirement benefits. Many widows with young children have had their survivors benefits suspended because they are in covered employment. Most of the workers who do retire are not able to work any longer. But even among the old people now on insurance rolls, about 62,000 are not drawing benefits because they have gone back to jobs covered by the system. Probably many others are working on farms or in other noncovered jobs which they can fill while receiving insurance benefits.

An estimated total of 64,000,000 employees were engaged in employment covered by old-age and survivors insurance during 1943. Almost 2,500,000 employers reported wages for their employees under this system during the year. At the end of the year there were 438 social security field offices in central towns and cities throughout the country to serve workers and their employers in all matters pertaining to old-age and survivors insurance.

Old-age and survivors insurance is financed by contributions from employers and employees. The contribution rate in 1943 was 1 per cent of wages, up to \$3,000 a year, for employees and 1 per cent of pay rolls (including only the first \$3,000 paid

to any employee) for employers.
At the end of 1943, assets of the old-age and survivors insurance trust fund totaled \$4,820,458,-000, of which \$304,166,000 represented interest on investments held by the fund. Total payments since benefits first became payable through Dec. 31, 1943, amounted to \$445,278,000.

The Federal-State unemployment insurance program protects industrial and commercial wage earners against total loss of income when they are thrown out of work. These State systems, in cooperation with the U.S. Employment Service of the War Manpower Commission (q.v.), do two things: When an insured worker loses his job, every effort is made to help him get another; but if no job is found within a short time, he receives weekly benefits (usually about half his normal wage) for a limited number of weeks depending on his previous employment record.

Unemployment benefits are financed by contributions from employers who are subject to the State unemployment compensation laws. The contributions are a percentage of wages paid (exclusive of wages in excess of \$3,000 paid by an employer during one year to one employee). In addition, four States require employee contributions.

Despite the fact that 1943 was a year of peak employment in the United States, some workers were laid off from both war and nonwar jobs and were able to get unemployment benefits while they were unemployed. Unemployment payments in the calendar year 1943 amounted to \$80,128,000 or 77 per cent less than in the preceding year. From 1936, when only Wisconsin's program was in operation, through the end of 1943, more than \$2,000,000,000 has been paid to unemployed workers.

The most important function of the program now is to build reserves against the day when demobilization of our armed forces and our war workers may result in the temporary unemployment of millions while industry reconverts to peacetime production. During this postwar readjustment period, unemployment payments will be available to many of the workers now in war industries and in military service who will be seeking peacetime employment and for whom industry will not be able to provide enough jobs immediately.

As of Dec. 31, 1943, about 45,000,000 employees had wage credits under State systems. The Federal unemployment trust fund held \$5,146,745,000 to the credit of the States. Credits to State accounts during the year amounted to \$4,711,112,000, representing State deposits of contributions collected and interest earned on obligations held by the fund.

The Federal-State public assistance program enables the States, with the aid of Federal funds, to give monthly cash allowances to needy old people, blind persons who are in need, and to children who lack parental support or care because of a parent's death, continued absence from home, or physical or mental incapacity. Monthly payments were made in December, 1943, to 2,149,000 needy old people, 59,400 blind persons, and 672,800 children in 270,800 families. Average payments were \$26.65 for old-age assistance, \$27.64 for aid to the blind, and \$41.65 per family for aid to dependent children.

In 1943, total payments to recipients from Federal, State, and local funds amounted to \$817,791,000 including \$651,915,000 to the aged, \$25,124,000 to the blind, and \$140,752,000 to dependent children. By September, 1938, all States, Alaska, Hawaii, and the District of Columbia, had approved plans for aid to the needy aged. By December, 1943, all States except Nevada and Alaska had approved plans for aid to dependent children, and all except Delaware, Missouri, Pennsylvania, Nevada, and Alaska, for aid to the blind.

War Emergency Aid Programs. The Social Security Board, through its Bureaus of Old-Age and Survivors Insurance and Public Assistance, also administers certain temporary programs designed to aid civilians who are injured or in need following an enemy attack or action to meet such attack or the danger thereof, and their dependents if disability or death results, or if they are reported as missing.

Figures from 8th Annual Report of the Social Security Board, 1943.
 Inform Federal participation, of the Social Security Board, 1943.
 Includes data for recipients 60 but under 65 years of age.
 Year ended June 30, 1943.
 Aid of dependent children.

(For details concerning these programs, see the 1943 Year Book.)

Civilians, including enemy aliens, in the United States, Alaska, Hawaii, Puerto Rico, and the Virgin Islands receive aid under special allocations of funds to provide money payments, loans (with or without interest or security), and assistance in kind and medical or other services necessary for the protection of health, safety, or welfare. Persons to whom aid is available include:

(1) Civilian defense workers, who are injured as a result of enemy attack or of action to meet such attack or the danger thereof, or who are injured while in the performance of their duties; or

(2) Dependents of individuals injured or killed under circumstances described in (1), or interned by the enemy, or reported as missing under circumstances indicating such death or internment; or

(3) Persons who are being or have been evacuated from any area under the direction of civil or

military authority; or

(4) Persons who are otherwise in need as a result of enemy attack or of action to meet such attack or the danger theerof.

In December, 1942, a large group of workers

hitherto covered by the temporary programs were transferred to the jurisdiction of the U.S. Employees' Compensation Commission. The act effectuating this transfer applies to employees of contractors with the United States and provides that compensation shall be paid or credited to such employees who are partially or totally disabled because of an injury proximately resulting from a war-risk hazard or who are missing or captured, and to the widow, child, and—if dependent—the widower, parent, brother, sister, grandparent, and grandchild of such persons who die as a result of these injuries. (See also WAR RELOCATION AUTHORITY.)

For details concerning operation of old-age and survivors insurance, unemployment compensation, and public assistance, see the 1941 YEAR BOOK. For statistics by States see tables on pages 576–578.

See CHILDREN'S BUREAU; INTERNATIONAL LABOR OFFICE; POSTWAR PLANNING; RAILWAYS; SILVER; STATE LEGISLATION under Social. For parallel developments in other countries, see Australia, Canada, Great Britain, New Zealand, and Uruguay under History.

ARTHUR J. ALTMEYER.

<sup>&</sup>lt;sup>a</sup> Not adjusted for voided benefit checks. <sup>b</sup> Adjusted for voided benefit checks. <sup>c</sup> Represents sum of balances at end of month in State clearing account and benefit payment account, and in State unemployment trust fund account maintained in the United States Treasury. <sup>c</sup> Includes \$5,276 resulting from review of 1938-41 seasonal claims in Oregon. <sup>c</sup> Includes \$135,609 resulting from review of 1938-41 seasonal claims in Oregon. <sup>c</sup> Average weekly number of workers receiving benefits in June.

SOCIAL STUDIES, SOCIAL WELFARE. See EDUCATION; JUVENILE DELINQUENCY; PHILANTHROPY; POSTWAR PLANNING; ROCKEFELLER FOUNDATION; LEGISLATION under Social; articles on Social SE-CURITY BOARD and other government agencies; Australia and other countries under History.

SOCIETIES AND ASSOCIATIONS. The following is a list of some of the leading national and international organizations, with a concise report of their activities during 1943. The organizations are listed alphabetically according to the first specific word in each title. Certain classifications have been omitted in this list because they are presented elsewhere in this volume. The reader is, therefore, referred to the following articles as a supplement: for accrediting associations, to the article on Universities and Colleges; for labor organizations, to Labor Conditions; for religious bodies, to Re-LIGIOUS ORGANIZATIONS, to the separate articles on churches, as well as to interdenominational groups listed below; for sport organizations, to articles on various sports and Amateur Athletic Union, below; for foundations, trusts, etc., to Philanthropy and the articles there referred to. For government agencies, learned academies, and institutes, see separate articles. For official international organizations, see Pan Americanism; United Nations, as well as various separate ar-

ticles.

Actors' Fund of America, founded in 1882 to care for the impoverished, aged, and infirm members of the theatrical profession. Membership (1942): 2,183. President: Walter Vincent. Secretary: Robert Campbell. Headquarters: 1619 Broadway, New York City. The Fund, supported by donations, benefit performances, and a limited endowment, spends from \$140,000 to \$180,000 a year. A home for retired actors is maintained in Englewood, N.J.

Adult Education, American Association for, founded in 1926 to serve as a clearing house for information, initiate activities, and assist enterprises already in operation, and to aid and advise individuals who, although occupied with some vocation or interest, desire to continue their education. Membership: 2,200. President: Austin H. MacCormick. Director: Morse A. Cartwright. Headquarters: 525 West 120 Street, New York City.

Advancement of Colored People, National Association for the, founded in 1909 to combat the spirit of persecution which confronts colored people in the United States, safeguard their rights, and secure for them equal opportunity with all other citizens. Membership: 225,000. President: Arthur B. Spingarn. Executive Secretary: Walter White. Headquarters: 69 Fifth Avenue, New York City. The Spingarn Medal for 1943 was awarded to Judge William H. Hastie, who in protest against discriminatory practices in the War Department in matters affecting Negroes, resigned from the post of Civilian Aide to Secretary of War Stimson. See Negroes.

in the War Department in matters alrecting Negroes, resigned from the post of Civilian Aide to Secretary of War Stimson. See Negroes.

Advancement of Music, Notional Bureau for the, founded in 1916 to promote musical interest and activities and to aid those interested in such activities. Membership: Anyone contributing \$5.00 or more. President: Howard Braucher. Bureau Director: C. M. Tremaine. Headquarters: 315 Fourth Avenue, New York City 10. The Bureau cooperates with existing agencies in the field of music and promotes National Music Week (beginning first Sunday in May), now expanded to National and Inter-American Music Week. Has available comprehensive list of publications on many aspects of music including school music, contests and festivals, community music, group instruction is applied music. Merged with the National Recreation Association January, 1943.

Advancement of Science, American Association for the, founded in 1848, a democratic and representative organization devoted to the whole field of science. Organized in 15 sections, it has about 25,000 members and 187 associated societies. President: Dr. Isaiah Bowman. Permanent Secretary: Dr. F. R. Moulton. Headquarters: Smithsonian Institution Building, Washington, D.C. Publications: A.A.A.S. Bulletin, Science, The Scientific Monthly, technical symposia and nontechnical scientific books. Advancement of Science, British Association for the, founded in York, England, in 1831. President: Sir Richard Gregory; Secretary: O. J. R. Howarth. Headquarters: Burlington House, London, W. 1. The Association holds an annual meeting at which papers are read (subsequently published) and sets aside an annual sum for scientific researches. In lieu of the Annual Meetings, in war time the Association has held Conferences, arranged by its Division for the Social and International Relations of

Science, dealing with postwar problems. The first of these conferences reviewed the general subject of Science and World Order, and out of this arose arrangements for subsequent conferences on Postwar European Agriculture, Mineral Resources, and other subjects, while a number of Committees have also been appointed to deal with Postwar University Education; Land Planning, Social Sciences, etc.

California condor.

Automobile Association, American (A.A.A.), founded in
1902 to provide a national network of service and protection for motor-club members and to work for the improvement of motoring conditions. Membership in A.A.A.
Clubs: about 1,100,000. President: Thos. P. Henry. General Manager: Russell E. Singer. Headquarters: 17th
Street and Pennsylvania Avenue, N.W., Washington, D.C.
During 1942 and 1943 a major campaign of the organization was to impress upon public officials the vital role
being played by passenger cars in wartime transport and
to head off a movement that, because of the rubber shortage, would have caused 20,000,000 or so vehicles to be
forced off the road. These efforts were crowned with success when the report of the Baruch Committee recommended a program of tire replenishment designed to keep
all mechanically fit vehicles operating for the duration.
Shortage of automobile mechanics, nationwide gasoline
rationing, cooperation in the scrap rubber collection drives
and intensive programs of training for civilian defense
aftivers, school bus drivers and army truck drivers were
other major problems dealt with during the recent past.
A.A.A. clubs provided new wartime services for members
including information on the many new regulations affecting motorists, development of car-sharing groups, and aid
in locating scarce replacement parts.

Automobile Manufacturers Association, founded in 1913

Automobile Manufacturers Association, founded in 1913

City. During 1943 the entire Scout Program was geared into the War Program and Scouts made a notable contribution through war service. Outstanding in this service was the one hundred million hours contributed in food production and conservation. Scouts continued to assist the Government in a number of other important projects, including the scrap drive for metals of all sorts and serving as official Dispatch Bearers for the OWI to distribute important Government publications. A new Pre-Ranger type of training was developed, designed to teach older boys skills which they might need in the Armed Forces, to give them a variety of training in self-reliance and personal discipline, thus equipping them for service if they should be called upon for military service. The new Aviation Merit Badge pamphlet and the Air Scout Manual were issued and the Air Scout Program attracted boys so fast that it was scarcely possible to organize Squadrons rapidly enough to enroll them. The 33rd Meeting of the National Council was held in New York City in May.

British War Relief Society, Inc., The, of the United States of America, a member agency of the National War Fund, was organized in 1939 and is the largest American organization engaged solely in relief for war sufferers in Britain, Malta, Australia, New Zealand, etc. It represents an amalgamation of the original British War Relief Society with the Allied Relief Fund, the British War Relief Society with the Allied Relief Fund, the British War Relief Society maintains 300 American Ambulances in Great Britain, 1,000 Mobile Canteens, many homes for bomb-shocked, homeless and alling children, rest and recreation centers for merchant seamen, homes for refugee mothers and children, rest and medical centers for war workers; has shipped great quantities of clothing for the destitute, many tons of vegetable seeds for war gardens. In the United States it maintains 31 rest centers for British merchant seamen in principal seaport cities, as well as centers for merchant seamen, homes for refu

to promote and detend the American system of privately owned, competitively operated radio and to render every aid to those engaged in it to enable them to operate in the public interest. Chumber of Commerce, United States Junior. An organization founded in 1920 to organize young men between 21 and 35 for civic service and community building activities. Membership: 65,000. President: H. Bruce Palmer. Executive Vice President: Douglas H. Timmerman. Headquarters: The LaSalle Hotel, Chicago, Illinois. Americanism Week is observed February 12-22 annually. Local and National Distinguished Service Awards were made to outstanding young men. This year all activities of the 843 constituent local organizations of the United States Junior Chamber of Commerce have been integrated with the nation's war effort. National magazine: Future. The 1944 convention was scheduled to be held in Omaha, Nebraska, June 17-19.

Chumber of Commerce of the United States, established in 1912 primarily as a vehicle for the expression of national business opinion on important economic questions. Membership: 1,762 chambers of commerce and trade associations, 7,377 individuals, and 4,484 associates. President: Eric A. Johnston, General Manager and Secretary: Ralph Bradford. Headquarters: 1615 H Street, N.W., Washington, D.C. The Chamber is centering its attention mainly upon war problems. Chamber spokesmen appeared before congressional committees to present a practical business viewpoint on pending legislation. Twelve service departments are maintained covering the main divisions of business activity. Publications include the Nation's Business, a monthly, the Washington Review, weekly, special legislative bulletins, and committee reports. In its 1943 program the Chamber had three major objectives:

(1) winning the war; (2) preparing for victory; and (3) long-range policies in line with the basic purpose to work for the preservation and upbuilding of free enterprise and representative democracy. An "action" program, adopted following the meeting in April, 1943, embraced federal fiscal affairs, prices and rationing, controls, renegotiation of contracts, management-labor, social security, termination and settlement of contracts, disposal of war plants and surpluses, and world economics. Several special committees, besides the regular departmental committees, were engaged during the year in studies of important and postwar problems. See Posswake Plaanning.

Common Council for American Unity, founded in 1918 to continue the work begun by the U.S. Committee on Public Information; it became an independent organization in 1921, and its name was changed from Foreign Language Information Service to Common Council for American Unity in 1940. The purpose of the Council is to help create unity and mutual understanding among the American people; to overcome intolerance and discrimination because of foreign birth or descent, race or nationality; and to help the foreign-born and their children to solve their special problems of adjustment. Executive Director: Read Lewis. Headquarters: 222 Fourth Avenue, New York City. Publications: Common Ground, a quarterly magazine.

Composers and Conductors, The National Association for American, founded in 1933 by the late Henry Hadley to advance the interest of the American composer, especially in relation to orchestral conductors, and to secure a hearing for serious works of merit. Membership: over 500. President: Sigmund Spaeth, 1650 Broadway, New York City, Headquarters: The Henry Hadley Studio, 15 West 67th St., New York City. In addition to regular meetings and concerts, the Association sponsored in 1943 all-American programs at Carnegie Chamber Music Hall, the Waldorf-Astoria and elsewhere. The Henry Hadley Fellowship in Creative Music was continued at the MacDowell Colony, Peterborough, N.H., and the Association cooperated with the leading orchestras, broadcasting stations, recording companies and publishers in the promotion of American music. Publications sponsored by the Association include a Piano Suite by Mortimer Browning (J. Fischer & Bro.), a Piano Sonata by Harold Morris (The Composers Press) and an orchestral piece, Winter of the Blue Snow, by Arthur Kreutz (C. C. Birchard & Co.). The Henry Hadley Memorial Library, housed in the Americana section of the Music Division of the New York Public Library, now contains a complete file of American works in the larger forms

the same program. Particular attention was paid to film scores by Americans, with several previews of important motion pictures, the President of the Association serving also as Chairman of the National Advisory Council on Film Music. The Henry Hadley Medal, for outstanding services to American music, was awarded in 1943 to Deems Taylor, with citations of merit to Paul Creston, Helen Traubel, Irving Berlin, John G. Paine, Robert Shaw, Major Howard Bronson, Gail Kubik, Miklos Rosza, the Roth Quartet, Arturo Toscanini and RCA-Victor.

Composers, Inc., The League of, founded in 1923 to further the works by living composers of all nationalities, as well as to help composers by commissions for new works and general promotion of their compositions. Executive Chairman: Mrs. Arthur M. Reis. Headquarters: 113 West 57 Street, New York City. The League publishes a quarterly, Modern Music, and conducts a program series in New York and over the air. ishes a quarterly, Modern Music, and conducts a program series in New York and over the air. The League is promoting the "Composers' Theatre" in cooperation with universities and music colleges where chamber operas in English are being presented. The League has invited 17 composers to write short works based on war themes, which the Philharmonic Orchestra will broadcast over CBS. The OWI expects to send records of these works to the Outpost stations throughout the world. Further plans for the League's 21st season are being prepared now in relation to war projects.

Consumer-Retailer Council, Inc., National, founded in 1987 to enable consumers and retailers to work out together their mutual problems. Membership: American Association, National Board of Young Women's Christian Associations, National Council of Jewish Women, American Retail Federation, National Association of Tood Chains, National Better Business Bureau, Inc., National Retail Dry Goods Association. Chairman: H. W. Brightman. Managing Director: Roger Wolcott. Headquarters: 8 West 40 Street, New York City. Accomplishments of 1943 include the extension of the Council's series of leaflets devised to show consumer and retailers in local communities how they can cooperate in speeding the war effort and help solve their war-borne problems. New leaflets were on Wartime Changes in the Cannea Food Field, Mail and Telephone Order Buying, Simplified Selling, Informative Selling, Textile Labels Approved by the National Consumer-Retailer Council, Six-Point Consumer-Business Program in a Defense Economy, Philadelphia Victory Forum, Sixth Annual Report of the National Consumer-Retailer Council, Inc., Know Your Stockings, A Guide to Local Consumer-Retailer Group Gooperation, and the NORO News, a bi-monthly bulletin. Consumer Foods are made and distributed, and through investigation, education, and legislation to promote fair labor standards; this includes state and federal minimum wage laws, child labor legislation, social security measures, limitation of lowers Ho

war-time consumers.

Control of Cancer, Inc., The American Society for the, founded in 1913 for the purpose of saving lives from cancer by educating the public about the facts of the disease. It does not treat patients, nor administer hospitals, clinics or laboratories. Membership: 700, composed largely of leaders in the fields of medicine and science. President: Dr. Herman C. Pitts. Secretary: Dr. C. P. Rhoads. Headquarters: 350 Madison Avenue, New York City 17. The lay educational program is conducted by the Women's Field Army, numbering 250,000 volunteer members. Highlight of its year's work is the educational and enlistment campaign conducted each April, designated as "Cancer Control Month." In September, 1942, the Women's Field Army adopted a special war service program to make a direct contribution to the war effort. This put special emphasis on health education of the general public, medical aid to local

physicians, and hospital service. A conference of Regional Directors of the Women's Field Army was held in New York in October, 1948, to select future objectives. The care of indigent patients, continuation of the war service program, efforts to have more cancer prevention clinics established throughout the nation, and enlargement of the carcer education program in schools will be emphasized during 1948-44.

ing 1943-44.

Cooperative League of the USA, The, founded in 1916 as a national educational federation of consumer cooperatives devoted to the extension of the consumer cooperative owned business enterprises. Membership: 1,500,000 in 22 affiliated regional and national associations. President: Murray D. Lincoln. General Secretary: E. R. Bowen. Headquarters: 608 South Dearborn, Chicago; 726 Jackson Place, N.W., Washington, D.C.; 167 West 12 Street, New York City. The 13th Biennial Congress of The Cooperative League, reported that there were two and a half million American families who are members of consumer and purchasing cooperatives, doing a business estimated at \$700,000,000. The cooperatives are growing fast, the League declared, but war conditions have brought serious problems. At the close of 1943 more than one hundred mills, factories and oil refineries were owned by the co-ops producing goods for distributors through wholesale and retail cooperatives.

Daughters of the American Revolution, National Society of, founded in 1890 for historical, educational, and patriotic purposes. Membership: about 145,000 in 2,570 chapters. President General: Mrs. William H. Pouch. Headquarters: Administration Building, 1720 D Street, N.W., Washington, D.C. The Society has adopted as its principal war project the D.A.R. War Project Fund, resulting from voluntary contributions of \$1 or more, from members, to be used to further the Blood Plasma Program and to purchase surgical and medical life saving equipment. In October, 1943, this fund totalled \$162,000, from which purchases have been made through the American Red Cross of 33 mobile blood donor units, 17 stationary blood donor centers, 8 station wagons, 2 sedans and 1 truck. During 1943, gifts totalling \$77,000 for 14 Approved Schools for foreign-born and Southern mountaineers were approved. Regular activities included instruction in the right use of leisure and respect for rights of others to 235,000 children in 7,200 Junior American Citizens Clubs, and distribution of 300,000 manuals for citizenship in 16 languages, to aid in naturalization. High school seniors from every State, winners of the Good Citizenship Contest, were given a war bond in lieu of the regular award of a trip to Washington. About 53,900 copies of the National Defense News were distributed as well as hundreds of thousands of Flag Codes and copies of the National Defense News were distributed as well as hundreds of thousands of Flag Codes and copies of other patriotic and educational literature. Through 118 dubs the Society furthered its educational endeavors in training girls in home making.

Daughters of Union Veter

makes use of all channels of communication to reach the public. In 1942 and 1943 major radio networks donated over \$600,000 worth of time to the Council; the principal programs were the dramatic series, "Dear Adolf," written by Stephen Vincent Benet, and "Day of Reckoning," written by top-flight American dramatists and produced by such actors as Raymond Massey, Monty Woolley, etc. Council's radio programs have won Variety Magazine's award for "outstanding patriotic service." Timely advertisements on critical home front problems have been prepared by the Council and have appeared in newspapers all over the country. A weekly service, "Speaking Freely," is used by many radio stations. The Council makes use of the conference method to bring together leaders of different groups and interests; round table meetings between industrial and labor leaders have produced measurable results. Council's attack on racial discrimination in the industrial field has developed effective policies and plans used now in industrial communities throughout America. Another major undertaking of the Council for service men.

Democratic Action, Union for, founded May 10, 1941, to carry on a two-front fight for democracy, at home and

carry on a two-front fight for democracy, at home and abroad, to oppose totalitarianism in all forms, to organize American liberals to give progressive meaning to the present war against Fascism. Federal Union, Inc., founded in 1989, and having as its goal American leadership in forming a federal union of free peoples as the nucleus of a world government. Membership: about 10,000. President: Clarence K. Streit. Secretary: Percival F. Brundage. Headquarters: 1728 Connecticut Ave., Washington 9, D.C. The 3rd annual national convention of the Union was held in Peoria, III, Nov. 12, 13, 14, 1943. In the 1942 elections the Massachusetts Federal Union referendum gained a three to one favorable vote. Current information is available in

Nov. 12, 13, 14, 1943. In the 1942 elections the Massachusetts Federal Union referendum gained a three to one favorable vote. Current information is available in the monthly organ, Federal Union World.

Field Service, American, a volunteer ambulance service on active duty with Allied troops overseas, with men and vehicles evacuating battle wounded in the North African, European and Burma theaters. Enlistments are open to men in limited service classifications of Selective Service. The American Field Service was originally organized at the start of World War I and served throughout that conflict with the French armies. In 1939 the ambulance service was actively reorganized. The renewed Service was sent to France where it served until the German occupation. In 1940 in answer to a request from General Wavell the Service sent the Voluntary ambulance corps to serve with British Forces in the Middle East, where they were attached to Montgomery's Eighth Army during the battle for North Africa. The Burma assignment came as an outcome of the work done by the Americans in the desert campaign. Headquarters: 60 Beaver Street, New York City.

Fire Protection Association, National, founded in 1896 to promote the science and improve the methods of fire

protection and prevention, to obtain and circulate information, and to secure the cooperation of its members in establishing safeguards against fire loss. Membership: 7,504. President: David J. Price. General Manager: Percy Bugbee. Headquarters: 60 Batterymarch Street, Boston, Mass. See FIRE PROTECTION.

Fire Underwiters, National Board of, an educational, factual and engineering organization founded in 1866 and

Geographical Society, American, a research institution founded in 18

Geographical Society, Royal, founded in 1830 for the advancement of geographical science. Membership: circa 4,900. President: Sir George Clerk. Secretary: Arthur R. Hinks. Headquarters: Royal Geographical Society, Kensington Gore, London, S.W. 7. The Society publishes the monthly Geographical Journal, technical publications,

Geographic Society, The National, founded in 1888 for the increase and diffusion of geographic knowledge. Membership: 1,200,000. President: Gilbert Grosvenor. Vice President: John Oliver La Gorce. Secretary: George W. Hutchison. Headquarters: 1146 Sixteenth Street, Washington, D.C. During 1943 the Society continued its archaeological investigations among pre-Columbian ruins in southern Mexico in cooperation with the Smithsonian Institution. The work, under the leadership of Dr. Matthew W. Stirling, uncovered at La Venta, State of Tabasco, art objects fashioned from jade of the highest quality yet found in the Western Hemisphere; mosaic floors made of tiles of polished green serpentine; flattopped altars with carved decorations; and a four-foot serpentine statue of a monkey with a semihuman face.

The Society placed on exhibit in its Administration Build-

The Society placed on exhibit in its Administration Building a plaster cast of one of the most striking objects unearthed during the progress of the investigations in southern Mexico—a colossal sculptured human head found near La Venta in 1940. Field studies of staff members during the year included those of B. Anthony Stewart in Haiti and the Dominican Republic, W. Robert Moore in Brazil, and Luis Marden in Nicaragua and Costa Rica. Continuing its special cooperation in the war effort, the Society made available to the armed forces and other Government agencies its vast fund of geographic information, photographs and maps covering all parts of the world. As supplements to its official publication, the National Geographic Magazine, the Society issued during 1943 the following large 10-color wall maps: Africa; Northern and Southern Hemispheres; Europe and the Near East; Pacific Ocean and the Bay of Bengal; and the World. The latter map was on a special projection showing the land masses and seas in a unified picture. Geographic News Bulletins, giving timely information in regard to places and areas brought into the world news by war activities, were furnished to more than 500 leading daily newspapers in the United States. Similar material covering current geographic developments were incorporated in the Society's illustrated School Bulletins and were sent into more than 30,000 schoolrooms to aid in keeping the teaching of geography up to date.

Gideons, The International (the Christian Commercial Men's Association of America), founded in 1899 to advance the placing of Bibles in hotels, hospitals, penal institutions, and public schools. Membership: about 15,000. President: A. E. Lewis. Secretary: Nellie F. Dewar. Headquarters: 202 South State Street, Chicago. The organization has distributed nearly six million Testaments to the armed forces.

addistributed nearly six million Testaments to the armed forces.

Girl Scouts, Inc., founded in 1912 to help girls develop as good citizens and resourceful people through group self-government and activities in the following fields: homemaking, arts and crafts, nature, the out-of-doors, literature and dramatics, community life, international friendship, sports and games, health and safety, music and dancing, and vocational exploration. Membership: \$16,893. President: Mrs. Alan H. Means. National Director: Mrs. Paul Rittenhouse. Headquarters: 155 East 44 Street, New York City. Girl Scout Anniversary Week was celebrated Mar. 12-18, and Girl Scout Week, Oct. 31-Nov. 6, 1943.

In 1943 as in 1917-18, war caused an increased number of girls to join the Girl Scouts to serve their country on the home front. The membership at the end of August had increased approximately 99,000 since the first of the year. In order to serve more girls and provide constructive training for future citizens, the organization worked out methods of cooperation with other national groups concerned with youth—the National Congress of Parents and Teachers, representatives of the Roman Catholic, Protestant, and Jewish faiths, the National Education Association, and many others. Girl Scouts in 1942 had given more than 5,000,000 recorded hours of service to community and country; the figure for 1943 was expected to be much greater. The number of girls who went to camp reached a new high in the summer of 1943. The Scouts' Juliette Low Memorial Fund, set up "to foster friendship among girls of all nations" presented \$7,000 to Mme. Chiang Kai Shek for the support of an orphanage near Chungking. This contribution was in addition to others which had been made to aid Greek, British, and Russian children. Russian children.

others which had been made to aid Greek, British, and Russian children.

Grange, The Notional, an Order formed in 1867 to give to the American farmer better social and educational opportunities, economic betterment, and higher spiritual and patriotic idealism; active in cooperative work and in State and National Legislation. Joint Distribution Committee, Inc., The American Jewish (J.D.C.), founded during the first World War to give emergency and reconstructive aid to needy Jews overseas. Membership: 3,638 in the National Council. Chairman: Edward M. M. Warburg. Executive Vice-Chairman: Joseph C. Hyman. Secretary: Moses A. Leavitt. Headquarters: 270 Madison Avenue, New York City. In four years of war, from September, 1939, to September, 1943, the J.D.C. spent a total of \$27,857,000 to provide these services to an average of 900,000 persons annually: feeding, shelter, clothing, medical aid and child care, emigration assistance, vocational training, cultural and educational help, resettlement and economic aid. During that period 68,000 persons were enabled to emigrate from Europe to the Western Hemisphere and Palestine.

Since Pearl Harbor, local committees affiliated with the J.D.C. in enemy-occupied countries have continued essential relief programs by borrowing money, food and commodities locally on the basis of a J.D.C. promise to repay the loans thus incurred when possible without aiding the enemy. J.D.C. work on behalf of native and refugee Jews goes on in Portugal, Spain, Switzerland, Sweden, Algeria, French Morocco, Tunisia, Tangier, Turkey, Iran, Palestine, and other areas. It is at present shipping food and clothing packages to refugee Jews in Soviet Asia from supply points in Palestine and Iran. Its major program outside Europe is in Latin America, where there are 125,000 immigrants whom J.D.C. programs of relief and rehabilitation have helped to fit into their new lives.

Monufacturers, National Association of (N.A.M.), an organization of individuals, firms, and corporations engaged in manufacturing, founded in 1895 with the following general objectives. (1) The promotion of the industrial interests of the United States; (2) the fostering of the domestic and foreign commerce of the United States; (3) the betterment of relations between employers and their employees; (4) the protection of the individual liberty and rights of employer and employee; (5) the dissemination of information among the public with respect to the principles of individual liberty and ownership of property; (6) the support of legislation in furtherance of those principles and opposition to legislation in derogation thereof. Membership: 10,000. President: Robert M. Gaylord, President of Ingersoll Milling Machine Co.; Chairman of Board: F. C. Crawford; Chairman of Executive Committee: William P. Witherow: Executive Vice-President: Walter B. Weisenburger. Secretary: Noel Sargent. Treasurer: Theodore G. Montague. Headquarters: 14 West 49 Street, New York City. Branch offices: Investment Building, Washington, D.C., 111 Sutter Street, San Francisco. Francisco.

Francisco.

To the individual manufacturer the Association offers its trained and practical assistance in supplying accurate and reliable information on pertinent subjects. The Law Department is devoted strictly to matters which pertain to the pursuits of the association, and aims to keep its members fully abreast of all decisions and interpretations of proposed and enacted laws which affect their business interprets.

members fully abreats of all decisions and interpretations of proposed and enacted laws which affect their business interests.

The Association has Standing Committees on the following subjects: corporation peacetime planning; economic security; government finance; government relation to industry; industrial health; industrial relations policy with divisions dealing with labor negotiations, manpower, supervisory problems, and wages and salary problems; patents; postwar problems with three major subdivisions dealing with transition period problems, distribution and international relations; and war.

To advise the standing committees in their deliberations, the N.A.M. has a number of advisory groups—these being, research advisory group, economic advisory group, several advisory group, Western employment advisory group, several advisory group, Western employment advisory group, and medical advisory committee on industrial health, and a public relations advisory group.

The N.A.M. also has established the Economic Principles Commission which is making intensive studies and analyses of the nature, operations, achievements and problems of the free enterprise system, and is under the chairmanship of Robert R. Wason. Another important activity is headed up by the Better America Program which was organized in 1943 to reduce the Association's basic thinking and its constructive recommendations on long-range governmental policies to a series of visual presentations which can be used to crystallize industrial opinion, and which industrialists in turn can use to give Congressmen and other government officials an impressive picture of industrial thinking. It is under the chairmanship of R. W. Prentis, Jr.

Within the N.A.M. there are several program committees to deal with specific groups in the economy. We may list these as the N.A.M. Committee on Cooperation with Education; and N.A.M. Committee on Home and Industry. The Association has been engaged since 1934 in sponsoring the most widespread and complete program has made

Psychical Research, Inc., American Society for, incorporated in 1904 for the scientific investigation of all types of psychical phenomena. Membership: 500. President: Dr. George H. Hyslop. Secretary: Mrs. Richard L. Kennedy, Jr. Headquarters: 40 East 34 Street, New York City. 16.

Psychological Association, American, founded in 1892 to advance psychology as a science. Membership: 5,825.

Oity 16.

Psychological Association, American, founded in 1892 to advance psychology as a science. Membership: 3,825. President: Gardner Murphy. Secretary: Willard C. Olson. Headquarters: University of Michigan, Ann Arbor, Mich. Psychology, American Association for Applied, listed under Applied.

Public Administration, Institute of, founded in 1906 as The Bureau of Municipal Research. The Institute's purpose is to improve the management and operation of American government through the scientific study of

public administration, the development of practical ideas

public administration, the development of practical ideas and improved procedures in government administration, dissemination of the results of such research to public officials and to citizens generally, and the advancement of training for the public service. Membership: 12. Chairman: Richard S. Childs. Director: Luther Gulick. Headquarters: 261 Broadway, New York City.

Public Administration Clearing House, founded in 1931 to serve as an exchange for information concerning administrative processes and problems in government, and to foster cooperation among organizations of operating officials, research units, technical experts, and others in the field of public administration. Acting Chairman of Board of Trustees: Ralph Budd. Director: Louis Brownlow. Headquarters: 1313 East 60 Street, Chicago.

Public Affairs Committee, Inc., founded in 1936 to make available in summary and inexpensive form the results of research on economic and social problems to aid in the understanding and development of American policy. Chairman: Ordway Tead. Secretary: S. M. Keeny, Headquarters: 30 Rockefeller Plaza, New York City 20. In their fifth million, there are more than 50 current Public Affairs Pamphlet titles.

Public Affairs, Institute of, founded in 1927 to examine and publicize by formal addresses and open-forum discussions important national and international problems. Public sessions from one to two weeks, usually in July. Membership and attendance: 3,000 yearly; 39,000 total. Acting Director: Oron James Hale. Secretary: Mary H. Spalding. Headquarters: University of Virginia, Charlottesville, Virginia. Emphasizes student participation through representatives of principal Eastern and Southern colleges. The program of the last (1942) sessions was built around the theme, "New Strategies for War and Peace." The Institute has been suspended for the duration of the war. duration of the war.

was built around the theme, "New Strategies for war and Peace." The Institute has been suspended for the duration of the war.

Public Health Association, American, founded in 1872 to promote and protect public and personal health. Membership: 8,300. President: Dr. Felix J. Underwood. Executive Secretary: Dr. Reginald M. Atwater. Headquarters: 1790 Broadway, New York City. During 1943, the Association through its project on Merit Systems rendered service to eight states and one city in supplying examination items for public health nurses, health officers, and laboratory workers. It distributed its reports on Standard Methods for the Examination of Water and Sewage, and of Dairy Products, Diagnostic Procedures and Reagents, Swimming Pools and Other Bathing Places, and on professional qualifications of several types of public health workers. Its committee on the Hygiene of Housing developed an appraisal form for use in selecting those houses which should be replaced for health reasons. Four active subcommittees were at work on postwar housing problems. The Committee on Administrative Practice conducted studies of state health administration, advanced its investigations and recommendations with regard to local health units, and compiled and published a range of indices of health experiences and practices for a group of 134 communities. The Sedgwick Memorial Medal for distinguished service in public health was awarded to Brig. Gen. James S. Simmons. Thirty-three cities and counties were placed on the National Health Honor Roll for the year 1942, and 10 city and rural areas were cited on the Health Honor Roll for Canada. The emphases of the Honor Roll for 1943 have been refocussed on wartime health services, including industrial hygiene, housing, control of venereal diseases. Two new Sections were established in the Association, on School Health and on Public Health Dentistry. The official publication of the Association is the American Journal of Public Health, now in its 34th volume.

Transportation Building, Washington, D.C. See RAIL-

WAYS.

Recreation Association, National, founded in 1906 with
the following objectives: That every child in America
shall have a chance to play; that everybody in America,
young or old, shall have an opportunity to find the best
and most satisfying use of leisure time. Membership:
10,000. President: Howard Braucher. Headquarters: 31:
Fourth Avenue, New York City. From the beginning of
the war the Association adapted its services to assist governments—local and national—with the recreation problems of men in uniform, war industry workers, and
civilians. civilians.

Refugees Relief Trustees. See NATIONAL WAR FUND. Religious Education, International Council of, founded in 1922 to promote Sunday School work, to encourage the study of the Bible, and to assist in the spread of the Christian religion. Membership: 42 Protestant denominations, 31 state councils of religious education, 65 city councils, and 800 county councils. President: Harold E. Stassen. Secretary: Roy G. Ross. In 1948 the Council held a conference on wartime responsibilities and policies, held a conference on wartime responsibilities and policies, sponsored 100 regional conferences on education for postwar world, prepared new Sunday School lesson outlines for use by member denominations, and supervised leadership activities for approximately 50,000 local church leaders and teachers. The annual meeting is scheduled for Feb. 7-12, 1944, in Chicago.

Rescue and Relief Committee, Inc., International, founded in February, 1942, by a merger of the Emergency Rescue Committee with the International Relief Association, and dedicated to the rescue and relief of anti-fascist refugees

Committee with the International Keller Association, and dedicated to the rescue and relief of anti-fascist refugees in Europe. Membership: 10 executive board members. Chairman: Dr. Frank Kingdon. Executive Secretary: Sheba Strunsky. Headquarters: 2 West 43 Street, New York City. Meetings are held bimonthly or as necessary. Research Council, National, founded in 1916 to "promote research in the mathematical, physical, and biological sciences, and in the application of these sciences to engineering, agriculture, medicine, and other useful arts, with the object of increasing knowledge, of strengthening

research in the application of these sciences to engineering, agriculture, medicine, and other useful aris, with the object of increasing knowledge, of strengthening the national defense, and of contributing in other ways to the public welfare." Membership: about 220, composed in majority of representatives of 85 scientific and technical societies; in addition to about 1,800 members of committees of the Council and its Divisions. Chairman: Ross G. Harrison. Executive Secretary: W. H. Kenerson. Headquarters: 2101 Constitution Avenue, Washington, D.O. The Council conducts a wide range of research activities in the medical and natural sciences under the sponsorship or supervision of specially appointed committees. Series of post-doctorate fellowships are administered in the medical and in the natural sciences. A number of publications resulting from work of the Council's Committees are issued each year, either commercially or in the Bulletin or Reprint and Circular Series of the Council. As an operating agency of the National Academy of Sciences, the Council is called upon frequently by agencies of the Government for advice and assistance in connection with many problems of research relating to the war effort.

connection with many problems of research relating to the war effort.

Research Council of Canada, National, founded in 1916 to have charge of all matters affecting scientific and industrial research in Canada which may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. Membership: 15. President: Lt. Gen. A. G. L. McNaughton (recalled to active duty). Acting President: C. J. Mackenzie. Secretary: S. P. Eagleson. Headquarters: National Research Building, Ottawa, Canada. The Council's staff of 1,205 in October, 1943, was grouped in laboratory divisions of applied biology, chemistry, mechanical engineering, physics and electrical engineering and a section on research plans which includes a scientific library and technical information service. Practically all activities were directed to war research for Navy, Army, and Air Force for which the Council is official research station. Prototypes of important tactical weapons designed by the Council are now in successful operational use. Outside activities included a research program of more than 70 war projects in universities; the granting of 65 scholarships for postgraduate research, and the award of 197 grants in aid to responsible workers for special investigations.

Review of Motion Pictures, Inc., National Board of, an

ers for special investigations.

Review of Motion Pictures, Inc., National Board of, an organization founded in 1909 to encourage the best uses of the motion picture recreationally, educationally, and artistically. Membership: 500. President: Quincy Howe. Executive Director: James Shelley Hamilton. Headquarters: 70 Fifth Avenue, New York City. The 18th annual announcement of the Board's choices for the best films of the year was made in December, 1948. In order of preference, they were: The Ox-Bow Incident, Watch on the Rhine, Air Force, Holy Matrimony, The Hard Way, Casablanca, Lassic Come Home, Bataan, The Moon Is Down, Next of Kim. Documentary films selected for the same year, in order of preference, were: Desert Victory, Battle of Russia, Prelude to War, Saludos Amigos, Sulent Village.

Rotary International is the world-wide organization of all

Rosenwald Fund, see PHILANTHROPY.

Rotary International is the world-wide organization of all Rotary clubs. It is responsible for the administrative supervision of its member clubs and for the propagation of the objects of Rotary throughout the world. A Rotary club is a group of representative men, one from each business or profession in a community, who meet together in fellowship to further the "ideal of Service" (thought-fulness of and helpfulness to others) in business and community life. The first Rotary club was organized in Chicago in 1905. There are now 5.201 Rotary clubs in more than 50 countries of the world with a membership in excess of 210,000. President: Charles L. Wheeler. Secretary: Philip Lovejoy. Headquarters: Chicago, Illinois—additional offices in London, England; Zurich, Switzerland; and Bombay, India. The official Rotary magazine is The Rotarian, which has a Spanish edition, Revista Rotaria. There are also numerous regional Rotary magazines published throughout the world in several different languages.

During 1943 Rotary activities included general community betterment undertakings, work for crippled children and underprivileged children, the establishment and supervision of camps and clubs for boys and girls, assistance to students through scholarships and student loan funds, the promotion of high ethical standards in businesses and professions, and the development of international good will and understanding. In addition, Rotary clubs actively cooperated with their governments in rationing, salvaging, and fund-raising campaigns, and in all phases of civilian defense, and engaged in activities for the alleviation of war suffering. In the United States and Canada 207 Institutes of International Understanding speakers on vital world problems. The 34th annual convention of Rotary International has had a special committee to study these problems. Principal activity of this committee in 1948 was the development of the "Work Pile" idea of cataloguing postwar work now planned by individuals and

assure adequate work for demobilized service men and war workers.

Royal Geographical Society, listed under Geographical.

Royal Institution of Great Britain, founded in 1799 for the promotion, diffusion, and extension of science and useful knowledge. Membership: about 800. President: The Right Hon. Lord Eustace Percy. Secretary: Maj. Charles E. S. Phillips. Headquarters: 21 Albemarle Street, London, W. 1.

Royal Society, founded in 1662 for improving natural knowledge. Membership: 460 Fellows and 45 Foreign Members. President: Sir Henry Dale, Treasurer: T. R. Merton. Secretaries: Prof. A. V. Hill and Sir Alfred Egerton. Foreign Secretary: Sir Henry Tizard. Assistant Secretary: John D. Griffith Davies. Headquarters: Burlington House, London, W. 1., England. Awards were made during 1943 as follows: Copley Medal to Sir Joseph Barcroft: Royal Medals to Sir Harold Spencer Jones and Dr. E. B. Bailey; Davy Medal to Prof. I. M. Heilbron; Sylvester Medal to Prof. J. E. Littlewood; Hughes Medal to Prof. M. L. E. Oliphant. The Croonian Lecture was delivered by Sir Edward Mellanby on July 15, 1943, and the Bakerian Lecture by Dr. R. V. Southwell on June 17, 1943. Five Ordinary Meetings were held during the year. The Anniversary Meeting was held Nov. 30, 1943.

Russien Wer Relief, Inc., founded in September, 1941, to furnish relief aid for the Russian people, ships medical supplies, clothing, and seeds to the U.S.S.R. Membership: 45 Board of Directors. President of the Board: Edward C. Carter. Secretary: Allen Wardwell. Headquarters: 11 East 35 Street, New York City. Russian War Relief, Inc., now functions under President Roosevelt's War Relief Control Board No. 547. See War Fund, National.

Relief, Inc., now functions under President Roosevelt's War Relief Control Board No. 547. See War FUND, NATIONAL.

Safety Council, National, founded in 1913 to bring about understanding of the steps necessary to prevent accidents of all kinds and to furnish its members with printed material and information for use in conducting accident prevention work. Membership: 6,036, mainly companies and associations. President: Col. John Stilwell. Executive Vice President and Managing Director: Ned H. Dearborn. Headquarters: 20 N. Wacker Drive, Chicago. The prevention of accidents as an aid to defense has been stressed by the Council since 1941. On Aug. 18, 1941, President Roosevelt issued a proclamation calling attention to the increased accidental death rates. Declaring that, "Accidents hinder national defense," he called upon the National Safety Council to mobilize its nation-wide resources in leading a concerted campaign against accidents, and upon every citizen to enlist in this campaign. The Council called together 130 national associations to cooperate in this campaign. It intensified its own activities in traffic and industrial safety. Special publications, films, and posters were produced and special studies

made on several aspects of traffic and industrial safety as they are affected by and as they affect the war effort. The Council published 8 magazines and hundreds of studies on accident prevention methods. It distributed over 6 million safety posters in 1943 for use in industry, in schools, and public places. It conducted many national safety contests among various groups and issued hundreds of awards. The National Safety Congress, attended by several thousands of delegates, meets annually in October. See ACOLDENTS.

Save the Children Federation, Inc., founded in 1932 as an organization for rural community child service in America and cooperation overseas with Save the Children International Union and affiliates. Chairman: Guy Emery Shipler. Executive Director: John R. Voris. Treasurer: John Q. Tilson. Overseas activities in 1943 were centered chiefly in the United Kingdom, cooperating with the Save the Children Fund of Great Britain in nursery support and wartime supplemental aid to children. In the United States the Children's Clothing Crusade in public schools was foremost, with a goal of 1,500,000 pounds. The total benefits—cash and commodities—collected in 1942 was \$1,135,343.

Savings and Loan Leegue, United States, a trade organization founded in 1892 by the savings building and loan

was foremost, with a goal of 1,500,000 pounds. The total benefits—cash and commodities—collected in 1942 was \$1,135,343.

Savings and Loan league, United States, a trade organization founded in 1892 by the savings, building and loan associations and cooperative banks of the United States, whose assets total \$6,500,000,000 and whose chief business is the lending of money to finance home ownership membership: 3,700 associations and 47 affiliated State leagues. President: Ralph H. Cake. Executive Vice President: Morton Bodfish. Headquarters: 221 North La-Salle Street, Chicago. The organization sponsored in 1943 a state-by-state drive for associations to invest in Government bonds and has brought their total of such investments up to some \$750,000,000. A Postwar Savings and Loan Program Committee was organized, and assembled material looking toward adaptation of home financing to public postwar needs. The League published the 13th of its series of year books, Savings and Loan Annals 1942.

Scondinevian Foundation, American, founded in 1911 to assist cultural relations between America and the Scandinavian countries. President: Henry Goddard Leach. Headquarters: 116 East 64 Street, New York City.

Science, American and British Associations for the Advancement of, listed under Advancement.

Sculpture Society, Notional, organized in 1893, to advanced the knowledge, creation and appreciation of good sculpture. The Society coperates in planning competitions and administers a trust fund which provides loans for sculptors in need. Membership: about 300. President: Edmond Amateis. Secretary: Cornelia Van A. Chapin. Headquarters: 115 East 40 Street, New York City. The Lindsey Morris Memorial Prize for 1943 was awarded to Janet de Coux for her Relief, Go to the Ant, Consider ther Ways and Be Wise Thou Sluggard. During the year the Society circulated two traveling exhibitions of enlarged photographs: Ecclesiastical Sculpture and American Patriots. See Arr under Sculpture.

Seemen's Service, Inc., United, founded Sept. 1, 1942,

iarged photographs: Ecclesiastical Sculpture and American Patriots. See ART under Sculpture.

Seomen's Service, Inc., United, founded Sept. 1, 1942, to provide for merchant seamen rest centers, residential and recreation clubs, personal service, and any other aida deemed necessary to promote the health, morale, and general welfare of officers and men of the merchant marine both in the United States and abroad. Chairman of the Board: Admiral Emory S. Land. President: Henry J. Kaiser. Secretary: Mrs. Lewis W. Douglas. National Executive Director: Douglas P. Falconer. Headquarters: 39 Broadway, New York City 6. On Oct. 15, 1943, USS had in operation in the United States, 5 rest centers for torpedoed seamen and for those in need of rest as a result of tension of wartime sea duty; 10 port medical offices, as well as 15 residential clubs, and 11 recreation centers, while abroad, 25 residential clubs had been established. Its overseas operations are geared to provide services for seamen as allied forces move into enemy territory. The annual meeting of the board will be held in New York City, Apr. 6, 1944.

Seeing Eye, Inc., The, a philanthropic association founded in 1929 for the purpose of supplying blind persons with dogs trained to act as guides; training and teaching instructors in the science and technique of educating dogs as guides; and educating and training blind persons in the proper use and handling of these dogs. The association trains 150 students annually, and there are now 800 blind men and women using Seeing Eye dog guides. Founder and Honorary President: Mrs. Dorothy H. Eustis. President: Henry A. Colgate. Headquarters: Morristown, New Jersey. The Seeing Eye, Inc. is supported by annual memberships and contributions. The maximum cost to a blind person is \$150, although the actual cost to The Seeing Eye is many times that amount. Seeing Eye dogs are now supplied without cost to eligible members of the armed forces who lose their sight in the line of duty.

Temperance Groups. See under Alcoholism, Anti-Saloon League, Woman's Christian Temperance Union.

Testing Materials, American Society for, a technical Society founded in 1898 to promote knowledge of the materials of engineering and to standardize specifications and methods of testing. Membership: 5,000. President: Dean Harvey, Secretary-Treasurer: C. L. Warwick, Headquarters: 260 South Broad Street, Philadelphia 2. During 1943 the Society continued its extensive standardization and research work in the field of engineering materials and issued numerous emergency specifications and emergency alternate provisions in existing standards to expedite the procurement of materials and to conserve strategic materials. A great many members are participating in Government and war production work. Important meetings were held to aid in the war effort; the 1944 Committee Week and Spring Meeting was held in Cincinnati, Ohio, February 26 to March 3. The 1944 Annual Meeting (47th) was scheduled for New York City, June 26 to 30.

Textile Foundation, The, an organization founded in 1930 to do scientific and economic research for the benefit of the textile industry. Chairman of Board of Directors: Franklin W. Hobbs. Secretary: Edward T. Pickard. Headquarters: Industrial Building, National Bureau of Standards, Washington, D.O. The laboratories and research workers of the Foundation are wholly engaged in work having to do with the prosecution of the war.

Theatre Wing Wor Service, Inc., American, founded as a nonprofit war service organization to further the war effort of the United Nations. It represents the entire entertainment world, including stage, screen, vaudeville, music, and all the allied crafts. Membership: about 50,000, President: Rachel Crothers. Chairman of the Board

and Secretary: Antoinette Perry. Headquarters: 730
Fifth Avenue, New York City 19. The most noted activity
of the Wing in 1943 continued to be the Stage Door
Canteens where service men in uniform of the United
Nations are entertained and fed without cost; Canteens
are now located in Newark, N.J., Philadelphia, Washington, D.C., Cleveland, and San Francisco. In addition, the
motion picture, Stage Door Canteen, shattered box-office
records, which will bring in an estimated \$2,000,000 to
be turned back to the Wing for war service use; while
the radio program of the same name continued its popularity and its steady income for use of the Wing.

Other activities of the Wing in 1943 were numerous
but may be mentioned as follows: a campaign personnel
division which supplied young women to sell war stamps
and bonds in all theaters; a club for merchant seamen; a
first aid and blood donor center which operated through
donations from players of current plays and from craft
groups of the theater; a Hospital Committee to provide
entertainment for hospitalized cases; a motion picture
It's Up to Fou-educational propagands on point rationing; "Lunchtime Follies" created to provide entertainment for factory workers and to curing production evils;
a Music War Committee formed to produce good war
songs; a national contest for songs, sketches, and one-act
plays; the speakers bureau and victory players, both of
which served many departments of the federal government by launching various war effort campaigns; a War
Dog Fund to put fighting dogs in the hands of the
armed forces; the War Production Training Committee,
a published survey of the crafts of the theater personnel,
made available to the WMC; and a Committee on Youth
in Wartime.

in 1916 to defend the English system of weights and measures against pro-metric propaganda. Membership: 85 corporations. President: W. R. Ingalls. Secretary: Robert F. Cogswell. Headquarters: 33 Rector Street, New York City. Wildlife Institute, American, an educational and scientific organization for the restoration of North American wildlife, founded in 1935. President: Frederic C. Walcott. Secretary: J. Paul Miller. Headquarters: 822 Investment Building, Washington, D.C. The Institute participates in 14 cooperative game management and wildlife research projects in different states and Canada. It sponsors the North American Wildlife Conference annually, and publishes the Transactions of the meetings held in connection with this Conference. It assists in the publication of books, bulletins, etc., relating to the conservation of natural rebulletins, etc., relating to the conservation of natural resources.

Woman's Association, American, founded in 1922 to provide for women engaged in commercial and professional pursuits, facilities for business and social contacts, and opportunities for recreation, mental stimulus, and physical betterment; to advance the economic, cultural, and social interests of women in their chosen fields of endeavor; and to maintain in the city of New York and elsewhere a clubhouse or other club quarters. Membership: 1,000. President: Natalie W. Linderholm. Secretary: Thalia N. Brown. Headquarters: The Barclay, 111 East 48 Street, New York City 17. Events of 1943 included the annual Association meeting, in April. The winner of the Anna W. Porter memorial award was Frances J. Pratt. In September an Association meeting commemorating the first anniversary in the new quarters was held, with Fannie Hurst as speaker, and in November, at the 17th annual Friendship reunion, the A.W.A. award was presented to Anne Morgan.

rating the first anniversary in the new quariers was held, with Fannie Hurst as speaker, and in November, at the 17th annual Friendship reunion, the A.W.A. award was presented to Anne Morgan.

Women's Christian Iemperance Union, National (WCTU), founded in 1874 to unite Christian women of the United States for the education of public sentiment in favor of total abstinence from the use of all alcoholic liquors, and to train the young in habits of sobriety. Membership: about 400,000. President: Mrs. Ida B. Wise Smith. Secretary: Miss Lily Grace Matheson. Headquarters: 1730 Chicago Avenue, Evanston, Ill. Continuing its emphasis upon the need for total abstinence in wartime, the Union supported enactment of legislation calling for prohibition of the sale of alcoholic liquors for the duration of the war and during the demobilization period. Increased support was given the Red Cross through gifts of 17 mobile units and other activities. The Safety School on Wheels, a Physical Fitness Clinic, was routed in United States centers where it was visited by 100,000 servicemen. Increased gifts and purchases brought the collection in the Frances Willard Memorial Library up to 35,000 volumes and a similar number of pamphlets and manuscripts, making it the largest alcohol library in the world now open to scholars and specialists in this field. Children's and youth's activities were strengthened through accelerated programs of the Loyal Temperance Legion and the Youth's Temperance Council. The slogan adopted for 1944 is "Christians Unite for Total Abstinence."

Women Arlists, Inc., National Association of, founded in 1889 to exhibit and display works of art by contemporary artists. Membership: 800. President: Georgiana B. Harbeson. Executive Secretary: Josephine Droege. Headquarters: the Argent Galleries, which the Association maintains, 42 West 57 Street, New York City. The Association sponsors an Annual Exhibition, at which a number of prizes are awarded, general exhibitions, rotary shows, a ketch class, lectures, etc. The ann

Women's Clubs, General Federation of, founded in 1890 to unite the women's clubs and like organizations throughout the world for the purpose of mutual benefit, and for the promotion of their common interest in education, philanthropy, public welfare, moral values, civics, and fine arts. Membership: 2,500,000 women in 16,500 clubs. President: Mrs. John L. Whitehurst. Headquarters: 1734 N Street, N.W., Washington, D.O. In 1943 the Federation sponsored a special campaign for the sale of warbonds to provide a fleet of bombers, bearing names of the State Federations, District Federations, and clubs. A quarter of a million dollars was raised by clubs to provide scholarships of \$250 each to student nurses; thousands of student nurses were recruited. Other programs of the year included an organized campaign to further food conservation; gardening; salvage drives; nutrition classes; nurse's aide, first aid and home nursing courses; recruitment of labor for farms and industry; recruitment of Wacs, Waves, Spars, Wafs, and Marines; extension of Pan American scholarships; and the study of peace and postwar planning. to unite the women's clubs and like organizations through-

Pan American scholarships; and the study of peace and postwar planning.

Women's Voluntary Services, American (A.W.V.S.), a permanent, nonsectarian, nonpolitical, and nonprofit national organization, created in January, 1940, to unite American women in the defense of their homes and the service of their communities and country, and motivated by a threefold purpose: to train women to translate a desire to help into a valuable skill; to place women where each is best qualified to serve; and to stand ready to serve the armed forces and any other governmental bureau. Membership: over 300,000. President: Mrs. Alice Throckmorton McLean. Secretary: Mary Vail Andress. Head-

quarters are at 345 Madison Avenue, New York City.

Women Voters, National League of, established in 1920 to promote political education through active participation of citizens in government. Membership: 34 affiliated State Leagues and over 600 local Leagues. President: Miss Marguerite M. Wells. Secretary: Mrs. R. T. H. Halsey. Headquarters: 726 Jackson Place, Washington, D.C.

World Allience for International Friendship through the Churches, founded in 1914 to promote international goodwill and peace. Membership: about 1,000. President: Rt. Rev. G. Ashton Oldham. General Secretary: Henry A. Atkinson. Headquarters: 70 Fifth Avenue, New York City. The organization published in 1943 the monthly News Letter; The Study of Peace Aims in the Local Church; Choose You This Day, 1943; Half of Humanity; Win the War—Win the Peace; The Peace Must Be Won Now; Program for Action; and a Christmas leaflet.

World Calendar Association, Inc., The, founded in 1930 to educate the public in the detects of our present calendar and on the benefits which a revised calendar, the perpetual World Calendar of 12 months and equal quarters, would bring to the world. Membership: about 12,000. President: Elisabeth Achelis. Secretary-Treasurer: Harriet A. Lillie. Headquarters: International Building, 630 Fifth Avenue, New York City. A contract was signed by Teachers College of Columbia University and The World Calendar Association to establish a one-year fellowship to develop a syllabus for the study of time measurement and calendar revision for use in secondary schools and junior colleges. Dr. William E. Castle, of the University of California, made a survey of the National Academy of Sciences on The World Calendar Association publishes a quarterly magazine, the Journal of Calendar Reform, and prepares pamphlets and articles for magazines.

World Peace Foundation, established in 1910 to promote international order and peace through publications, study groups, and a reference service. President: George H.

Sciences on The World Calendar. Also approximately were 128 (76%). The World Calendar Association publishes a quarterly magazine, the Journal of Calendar Reform, and prepares pamphless and articles for magazines. World Peace Foundation, established in 1910 to promote international order and peace through publications, study groups, and a reference service. President: George H. Hakeslee. Director: Leland M. Goodrich. Headquarters: 40 Mt. Vernon Street, Boston, Mass. The Foundations published in 1943 The Future Economic Policy of the United States, by William Adams Brown, Jr.; Collective Security: The Why and How, by Senator Joseph H. Ball; War and Peace Aims of the United Nations, by Louise W. Holborn; volume five of Documents on American Foreign Relations (Scheduled for publication in 1944). The Foundation also published Postwar Problem Analyses, in association with the Universities Committee on Postwar International Problems.

Young Men's Christian Associations, The Notional Council of (Y.M.C.A.), formed as a national committee in 1866. The first local organization was formed in London in 1844 (in the United States in 1851) for the physical, mental, social, moral, and religious education of youth, Membership: 1,199,223 in 1,200 local associations, President: Howard S. Coffin. General Secretary: Engene E. Barnett. Headquarters: 347 Madison Avenue, New York Gity, Major emphasis in 1943 included service to young men in military and related defense service as one of six agencies composing the United Service Organizations, with responsibility for operating approximately 493 clubs and centers, in addition to extending regular facilities everywhere. Also expanded greatly needed service among four to six million prisoners of war, through World's Alliance at Geneva, and continued fity-year-old program of international cooperation in thirty countries. Policies approved by the National Council for the year included to the particle of young women's their exponsibility in such a world order: and (3) to join with other Chri

dustries. A special wartime project of the Y.W.C.A. was that carried as one of the agencies comprising American War-Community Services. As part of this joint enterprise the Y.W.C.A. served women and girls by providing recreation and other facilities in communities where there was an enormously increased population and where few or no such facilities existed. Through the support of the World Emergency and War Victims Fund of the Y.W.C.A. in the United States, the Y.W.C.A.'s in the United Nations were enabled to meet the war needs of their women and girls, both those at home and in service, and to aid in the relief and restoration of war victims.

Youth Hostels, Inc., American, founded in 1934 to help all, especially young people, to a greater knowledge, understanding, and love of the world; to enable them through hostelling to enjoy the cultural benefits of travel and to live happier and healthier lives. Membership: 10,865 passholders. Honorary President: Dr. Mary E. Woolley. President: Julien Cornell. National Directors: Monroe and Isable Smith. Headquarters: Northield, Massachusetts. In 1943 thousands of hostellers worked on farms as their

live happier and healthier lives. Membership: 10.865 passholders. Honorary President: Dr. Mary E. Woolley. President: Julien Cornell. National Directors: Monroe and Isable Smith. Headquarters: Northfield, Massachusetts. In 1943 thousands of hostellers worked on farms as their national service, hostelling to their work area and home at vacation's end. Hostels are now chartered in 25 states. Youth Problems, Committee on, appointed by the American Council on Education in 1942 to implement the findings of the American Youth Commission, and to form a rallying point for the many and worthy organizations carrying on youth programs, both governmental and nongovernmental. Chairman: Henry I. Harriman. Executive Secretary: Donald J. Shank. Headquarters: 744 Jackson Place, Washington, D.C. The original American Youth Commission was set up in 1935 by the American Youth Commission was set up in 1935 by the American Youth Commission was set up in 1935 by the American Youth Commission was set up in 1935 by the American Youth on Education with funds granted by the General Education Board, to study and evaluate factors relating to the care and education of American youth. With publication of its final report Youth and the Future, in January, 1942, the work of the Commission was completed, and with its disappearance it was apparent that there was no one group left in the field whose interest was not centered upon some one segment of the youth population of the nation. For this reason the Committee on Youth Problems was founded. Publications: Color, Glass, and Persondity; Youth and the Future; Working with Rural Youth; Youth in the COC; Barriers to Youth Employment; and 20 other titles.

Linist Organization of America, founded in 1397 to enlist public support for the upbuilding of a Jewish Commonwealth in Palestine and to foster a program of Jewish reasissance. Membership; 70.000 exclusive of membership of affiliated and constituent organizations. President: Dr. Israel Goldstein. Executive Director: Simon Shetzer. Headquarters: 17

<sup>&</sup>lt;sup>a</sup> Negroes. <sup>b</sup> Including Walvis Bay (430 sq. miles).

The total estimated population on June 30, 1942, was 10,708,500 (Europeans, 2,230,000; non-Europeans, 8,478,500). The census of Europeans taken May 6, 1941, showed 1,109,289 males and 1,082,896 females, or a total of 2,192,185. Living births among Europeans in 1941 numbered 54,569; deaths, 20,733; marriages, 22,690. In 1941 Johannesburg had 281,706 European inhabitants, Cape Town, 187,946; Durban, 112,890; Pretoria, 112,778. Total populations of the chief cities, including suburbs, at the 1936 census were, with the number of Europeans in parentheses: Johannesburg, 519,384 (257,671); Cape Town, 344,233 (173,412); Durban, 259,606 (95,033); Pretoria, 128,621 (76,935); Port Elizabeth, 109,841 (53,461); Germiston, 79,440 (32,564); East London, 60,563 (31,311); Bloemfontein, 64,233 (30,291). The same census showed that the home language of 1,120,770 persons (55.93 per cent of the European population) was Afrikaans, 783,071 (39.08 per cent) English, 50,411 (2.52 per cent) English and Afrikaans, 17,810 German, and 17,684 Yiddish. The Afrikanders are mainly engaged in agricultural pursuits while the British tend to dominate commerce, trade, and finance.

Education and Religion. State-conducted and state-aided public schools for European pupils numbered 3,808 with 394,180 pupils in 1940; for non-Europeans, there were 5,173 schools with 649,108 pupils. Current expenditures for these schools numbered £10,387,435 (South African pounds) in 1940. In 1941 there were 9,303 full-time and 2,004 part-time students enrolled in the five universities. The religious affiliations of the European population at the 1936 census were: Dutch churches, 1,088,826; Anglican, 345,103; Presbyterian, 82,283; Methodist, 140,658; Roman Catholic, 92,352; Jewith 20,262

Production. Gold mining, the most important industry, employs nearly 400,000 persons. It nor-

mally accounts for over 70 per cent of the value of all exports and for 30 per cent of the Treasury's ordinary revenue. Gold production in 1941 reached the record level of 14,386,361 fine oz. valued at £120,845,114. In 1942 it declined to 14,120,617 fine oz., valued at £118,613,158. Gold-mine dividends reached a peak of £21,061,000 in 1940. Output of other minerals in 1940 was (in short tons): Coal, 18,933,764; chromite, 180,390; copper, including gold concentrates, 19,804; iron ore, 704,113; manganese ore, 454,283; pyrites, 40,456; asbestos, 27,392; magnesite, 13,098; corundum, 4,211. The 1940 platinum production was 70,272 oz.; diamonds, 543,463 metric carats, valued at £1,620,467.

Yields of the chief crops in 1940–41 were (in metric tons): Wheat, 466,800; corn, 2,159,100 (excluding native cultivation); cane sugar, 467,-800 (580,000 short tons, estimated, for 1942–43). Oats, rye, barley, potatoes, citrus fruits, tobacco, and tea are secondary crops. Wine production in 1941 was 50,382,297 Imperial gal. Livestock in 1939 included 12,060,000 cattle, 38,406,000 sheep, 6,140,000 goats, 965,000 skine, and 777,590 horses (1937). The wool clip for 1940–41 was about 811,888 bales (of 477 lb.). The census of 1937–38 showed 10,234 industrial establishments, with 348,520 employees (143,760 whites). The newly established steel industry produced 360,000 metric tons of pig iron and ferro-alloys in 1942 (312,000 in 1941). According to the Federation of Engineering and Metallurgical Associations, engineering in 1942 ranked second in importance among the Union's industries, with a capital investment of £15,369,000, a gross output of £42,943,000, £12,943,000.

Foreign Trade. Imports in 1940 totaled £105,099,234 (£91,341,108 in 1939); exports, excluding gold, £34,090,637 (£34,196,010 in 1939). Figures are in South African currency. For the distribution of the 1940 trade, see 1942 Year Book. Trade statistics for 1941 and ensuing years

were not published.

Finance. For the fiscal year ended Mar. 31, 1943, actual budget receipts (excluding loans) were £108,500,000 (£85,500,000 in 1941–42); total expenditures, £163,300,000 (£132,300,000 in 1941–42); and war expenditures about £80,000,000 (£72,100,000 in 1941–42). Preliminary budget estimates for 1943–44 placed total expenditures at £163,540,500, of which £108,540,500 was to be obtained from revenue, and £55,000,000 from loans. Of the total expenditures, £96,000,000 were for war. This sum raised the Union's total war expenditures during World War II to £570,000,000. Including the external debt at par, the total public debt increased from £293,000,000 on Dec. 31, 1939, to £430,000,000 on Mar. 31, 1943. The external debt, which amounted to £103,000,000 on Sept. 1, 1939, was reduced by the exchange of newly mined gold for Union securities held in London to less than £7,000,000 in 1943. Average exchange value of the South African pound: \$4.4017 in 1939 and \$3.98 during 1940–43.

Transportation. The Union in 1942 had in operation 13,241 miles of government-owned railway lines, 92,143 miles of highways, and air lines serving all of the principal cities and connecting with the British air network radiating from Cairo and with the Pan American Airways terminal at Leopoldville, Belgian Congo. In January, 1942, the Sabena (Belgian) air system inaugurated a new line between Leopoldville and Cape Town. The

South African Railways and Harbors system, an antonomous government corporation, reported gross surpluses of £3,641,507 for 1941-42 and £4,168,000 for 1942-43, raising its accumulated surplus on Mar. 31, 1943, to about £11,040,926. The chief ports are Durban, Cape Town, Port Elizabeth, and East London. An important part of the Union's trade flows through Lourenço Marques, Mozambique.

Government. Executive power is exercised by the Governor General, appointed by the King on recommendation of the South African Government, and by the Executive Council (Cabinet), which is responsible to Parliament. Parliament consists of a Senate of 44 members serving 10-year terms (8 appointed by the Governor General and 36 elected) and a House of Assembly of 152 members, elected by white male and female suffrage for five years unless sooner dissolved. Governor General in 1943, Sir Patrick Duncan (assumed office March, 1937).

The United Party, which had controlled the Government since 1933, split on Sept. 5, 1939, when Prime Minister J. B. M. Hertzog's neutrality policy was opposed by Gen. (later Field Marshal) J. C. Smuts, then Deputy Prime Minister, and defeated in the House of Assembly, 80 to 67. Prime Minister Hertzog resigned when the Governor General refused his request for the dissolution of Parliament and new elections. General Smuts formed a new Government Sept. 5, 1939, with the support of the Dominion and Labor parties. On September 6 he proclaimed the Union to be at war with Germany (for other war declarations, see table under WORLD WAR). Dissident elements in the United Party then merged with the prorepublican Nationalists under Dr. D. F. Malan to form the Reunited National or People's party in opposition to the Government. There was a split in the Reunited Party in November, 1940, when General Hertzog and a group of his followers resigned in protest against the Malanite program signed in protest against the matanite program for immediate establishment by legal means of a Boer-dominated republic. Hertzog retired from active politics (he died Nov. 21, 1942), but his followers in January, 1941, formed the new Afrikaner party, led by Hertzog's former Minister of Finance, N. C. Havenga. While opposing participation in the way this party stead for course ticipation in the war, this party stood for equal civil, religious, and cultural rights for both Dutch and British elements of the population. A further split within the Reunited National or People's party took place in 1942, when 17 members of the House of Assembly and one Senator formed the so-called New Order Group in opposition to Dr. Malan's leadership. Headed by Oswald Pirow, Hertzog's former Minister of Defense, this group advocated the establishment of a Nazified state, and was apparently prepared to use violence to attain its end. For developments in 1943, see below.

# HISTORY

Smuts' Greatest Victory. With the reconvening of Parliament on Jan. 16, 1943, Prime Minister Jan C. Smuts opened the final and decisive campaign of his hard-fought political struggle for the full participation of the Union in the World War as a loyal member of the British Commonwealth of Nations. The struggle began at the outbreak of the conflict in September, 1939, when Smuts assumed leadership of the pro-war forces that ousted Prime Minister Hertzog and obtained Parliament's approval of a declaration of war against Germany by the narrow margin of 13 votes. The anti-war and

anti-British groups opposed to this policy fought stubbornly to obstruct the Government's war efforts, to revoke the war declaration, and in some cases to bring about immediate secession from the British Commonwealth.

By courageous and shrewd leadership, Smuts and his supporters gradually won an increasing margin of strength over the Opposition (see preceding YEAR BOOKS). By the outset of 1943 Smuts' star was strongly in the ascendant due to the success of his policy in meeting a demonstrated threat to South Africa's independence and security. British landings in Madagascar in 1942 had forestalled a Japanese occupation, which would have brought South African cities within air range of Madagascan bases. British naval power had kept the sea lanes to South Africa open despite depredations of German and Japanese submarines. Finally, Allied forces were on the point of throwing the Axis out of its last foothold on the African continent in Tunisia. The victory which to many South Africans had seemed impossible was at last within sight.

Despite the fact that an estimated 40 per cent of the Afrikanders still remained either openly hostile or indifferent to the war, Smuts now had an important strategic advantage. He pressed this advantant strategic advantage. He pressed this advantage by giving notice that the new session of Parliament would be asked to authorize voluntary service for South African volunteer troops outside of the African continent. The Opposition leader, Dr. D. F. Malan, sought to undermine the Government's rising prestige among the Afrikanders by demanding a comprehensive scheme of social security and more effective state control of the mining and manufacturing industries that were largely

dominated by British capital.

The debates in Parliament were punctuated by new bombing outrages, attributed to German agents or sympathizers among the extremist fringes of Afrikander nationalists. Toward the end of January an engineering factory at Brakpan was par-tially wrecked by a bomb. Telephone lines were cut, and several pylons carrying high-tension power lines were dynamited. On March 11 a former South African policeman and noted athlete, Sydney Robey Leibrandt, was convicted of high treason at Pretoria and sentenced to death for serving as a German agent in organizing sabotage (see 1943 YEAR BOOK for his activities).

Meanwhile Smuts' motion authorizing South African troops to serve outside the continent was approved by the House of Assembly on February 4 by a vote of 75 to 49, or exactly double the majority the Prime Minister had at the outset of his war administration. Smuts followed up this victory by announcing on April 21 that a general election

would be held in August.

The Election. For the first time since the outbreak of the war, the Union's 1,250,000 voters-20 per cent of whom were in the armed forces-were thus given an opportunity to pass upon the issue of war or peace. Describing himself as "an old horse in his last race," the 73-year-old Prime Minister entered the campaign with the solid support of the Government coalition on a platform calling for vigorous prosecution of the war to a victorious conclusion and active participation in the creation of a postwar system of world order and security. The chief Opposition leader, Dr. Malan, said that if his Nationalist party won it would seek immediate peace with the Axis and recall all South African troops from the war fronts. He played upon racial antagonisms and made much of the danger from communism following an Allied victory.

The campaign was marked by daily shortwave broadcasts from Germany attacking the Smuts Government. The anti-Smuts groups' only hope of winning lay in forming a united front. However Dr. Malan rejected all proposals from the other anti-Smuts parties that he head a united Opposition ticket, with the result that the anti-Government vote was split in some constituencies. Former War Minister Oswald Pirow's "New Order" (National Socialist) party boycotted the elections. Nevertheless 75 per cent of the voters went to the polls on July 7 and registered an overwhelming victory for the Smuts Government and its war policies.

The following results show the standing of the various parties after the voting, with the pre-election standings in parentheses: Government coalition—United party (leader, Prime Minister Smuts), 89 (72); Labor party (leader, Walter Madeley), 9 (4); Dominion party (leader, Col. F. C. Stallard), 7 (8); Independents, 2 (0); total, 107 (84). Opposition parties—Reunited Nationalists or Herenigde (leader, Dr. Malan), 43 (41); "New Order" party (leader, N. C. Havenga), 0 (8); total, 43 (66). Smuts' United party emerged with a majority of 25 (28 including the three natives' representatives) over all the other parties. All of the Cabinet Ministers were reelected, some with record majorities. Nine Communist candidates were overwhelmingly defeated. Supporters of the Smuts Government polled a total of 610,143 votes against 347,057 polled by anti-Smuts candidates.

Government Reorganized. Soon after his victory, the Prime Minister announced a reorganization of the Cabinet departments. A Ministry of Transport was established, incorporating the existing Ministry of Railways and Harbors. A new Ministry of Welfare and Demobilization undertook to coordinate all Government activities concerned with social welfare and security. And a new Ministry of Economic Development was set up, embracing the existing Department of Commerce and Industries and the vice-chairmanship of the Cabinet committee on reconstruction.

Smuts in London. Two months after the election, Prime Minister Smuts arrived in London for lengthy consultations with Prime Minister Churchill and other British leaders. It was announced that he had been given the status of a member of the War Cabinet during his stay in Britain. The matters under discussion were not announced, but were understood to include postwar policies of the British Commonwealth of Nations-scheduled for discussion at a meeting of Dominion Prime Ministers in London in the spring of 1944—the disposal of the Italian colonies in Africa, etc. The Prime Minister's address to a distinguished audience at the Guildhall on October 19 attracted worldwide attention (see Great Britain under History). Smuts returned home in December, stopping en route at Cairo to discuss with Prime Minister Churchill and President Roosevelt the developments at the Cairo and Tehran Conferences (see UNITED NATIONS).

Other Foreign Relations. The extension of discriminatory legislation against Indians and other Asiatics, restricting their purchases of real estate in certain South African cities, stirred up vigorous resentment in India and brought protests from the Indian Government. In September the Government imposed a ban on imports of certain manufactured goods from Argentina because of the high prices and poor quality of the goods received.

On March 12 the Prime Minister announced that the U.S. Government was sending a representative to South Africa to negotiate a lend-lease agreement. No such agreement was announced up to the end of the year, but early in October the British, South African, and U.S. Governments agreed to establish a joint supply council in Johannesburg to assist the Union in meeting its supply difficulties and in mobilizing its economic resources to further the United Nations' war effort. A statement by Dr. H. J. van der Byle, Director-General of Supplies for South Africa, indicated that South African troops and supplies were being diverted from the European to the East Asian theater of war.

Economic Developments. With some 60,000 men at work in factories engaged entirely on war production and an accompanying increase in production of manufactured articles for civilian consumption, South Africa in 1943 experienced a spectacular industrial development. The economic boom and curtailment of imports produced a sharp rise in prices and in the amount of currency in circulation, despite Government efforts at price control. Effective February 1 a National Supply Council was established to advise the Government on the regulation of production, supply, and trade. The Director-General of Supplies used his extraordinary powers to form a 10-man Control Board through which businessmen took over control of the whole military and civilian supply program from the civil service. However the country's heavy dependence upon imports of manufactured commodities made the price stabilization program extremely difficult to achieve. Higher taxes, designed to raise an additional £9,200,000, were imposed in the new budget introduced February 24.

See Great Britain and India under History; World War; also, Asbestos; Chemistry under Foreign; Ports and Harbors; Water Supply.

**SOUTH AMERICA.** A continent comprising 10 republics (Argentina, Bolivia, Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay, and Venezuela) and three colonies (British Guiana, French Guiana, and Surinam). Total area, about 6,935,648 square miles; estimated population, 88,680,000 on Jan. 1, 1940.

SOUTH AUSTRALIA. See Australia under Area.

SOUTH CAROLINA. A south Atlantic State. Area: 31,055 sq. mi. Population: 1,899,804 (1940 census); 1,835,937 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Acricultures; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 Year Book, p. 480.

Elections. See the article Elections in the United States; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE

Officers. The Governor is Olin D. Johnston (Dem.), inaugurated in January, 1943, for a four-year term; Lieutenant Governor, Ransome J. Williams; Secretary of State, W. P. Blackwell, Attorney General, John M. Daniel. See Prisons under Prison Scandals.

SOUTH DAKOTA. A west north central State. Area: 77,047 sq. mi. Population: 642,961 (1940 census); 552,728 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of moniformal her land that the statistics. of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Воок, р. 430.

Elections. See the article Elections in the United States; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE

LEGISLATION.

Officers. The Governor is M. Q. Sharpe (Rep.), inaugurated in January, 1943, for a four-year term; Lieutenant Governor, Albert C. Miller; Secretary of State, Mrs. L. M. Larsen; Attorney General, George T. Mickelson. See BENTONITE; BERYLLIUM; STATE LEGISLATION under State Government and Employees.

SOUTHERN RHODESIA. See RHODESIA, SOUTHERN. SOUTH GEORGIA; SOUTH ORKNEYS. See FALKLAND ISLANDS.

SOUTH-WEST AFRICA. A territory in Africa, administered by the Union of South Africa under a mandate from the League of Nations, dated Dec. 17, 1920. Total area, 322,394 square miles. The area of Walvis Bay (374 sq. mi.), owned by the Cape of Good Hope but administered by South-West Africa is included in the total. Total population (1936 census), 318,099, including 30,677 Euro-peans (9,632 German speaking) and 283,517 natives (estimated). Total estimated population (Jan. 1, 1940), 330,000. Chief towns: Windhoek (capital), 20,413 inhabitants including those in the surrounding district, Lüderitz, Keetmanshoop, Swa-kopmund, and Walvis Bay. Education (1941): 72 European schools and 6,295 pupils; 100 native schools and 5,781 pupils.

Production and Trade. Stock raising is the most important industry. The scarcity of water and low rainfall render agriculture unprofitable, except in the northern and northeastern parts of the country. Livestock (1939): 1,053,033 cattle, 4,937,802 head of small stock, 29,104 horses, 105,642 donkeys, and 1,802 mules. Butter output (1941): 8,135,919 lb. Karakul pelts exported in 1941 totaled 2,273,743. Minerals (1941 exports): diamonds 120,442 carats, vanadium 2,629 long tons, tin 170 long tons, gold, silver, tungsten, copper, lead, iron, and salt. Trade (1941): imports £2,730,965; exports exports £4,961,431 (official exchange rate of SA£ was

Communications. Railways (1941): 1,584 miles. The railway administration also operated 1,714 route miles of road motor services in the territory. Roads (1940): 20,000 miles.

Government. Finance (1941-42): £1,101,785; expenditure £781,049, revenue £1,101,735; expenditure £781,049, including loan expenditure of £53,277. South-West Africa is included in the South African Customs Union and a lump sum (approximately £182,000 annually) based on the customs and excise taxes on goods consumed in the territory is paid to the administration. The Governor is headed by an administrator (appointed by the Governor General), assisted by an executive committee and a legis-lative assembly of 18 members (12 elected and 6

nominated). Administrator, Col. P. I. Hoogenhout who succeeded Dr. D. G. Conradie at the end of March, 1943. See Great Britain, *History*.

SOVIET UNION. See Union of Soviet Socialist REPUBLICS.

SOYBEANS. The production of soybeans for beans in the United States in 1943 was estimated by the U.S. Department of Agriculture, at 195,762,000 bu., an all-time record (being 5 per cent larger than the revised estimate for the 1942 crop of 187,155,000 bu.), nearly quadrupling the 1932-41 average of 51,571,000. A new high was again set in 1943 for acreage harvest for beans, 10,820,000 acres versus 10,008,000 acres in 1942. The reported acreage grown alone in 1943 was 14,762,000 acres and the interplanted acreage 2,604,000 or an equivalent of a total solid or grown-alone acreage of 16,064,000 acres. Acreage yield per acre was 18.1 bu. in 1943, 18.7 bu. in 1942, and 16.7 bu. for the ten years. The season average price per bushel (preliminary) received by farmers was \$1.81 and the value of production was estimated at \$353,960,000 versus \$1.61 and \$300,724,000 for 1942. The War Food Administration allocated 181,250 tons of soybean products for domestic foods for the year ending June 30, 1944, which is 12 times larger than the quantity consumed last year. Most of the soybean crop will be used for war purchases overseas, to meet the critical nutritional needs of occupied countries. The accompanying table lists the leading soybean States in 1943. See ACRICULTURE under Commodity Credit Operations; HAY; PLASTICS.

SPAIN. A state of southwestern Europe. Capital, Madrid.

Area and Population. Area, 196,607 square miles, including the Balearic Islands (1,985 sq. mi.) and the Canary Islands (1,279 sq. mi.). The 1940 census population was 26,251,188 (23,563,687 in 1930), including the Balearic Islands (411,273) and the Canaries (322,332). Vital statistics for 1941 (1940 figures in parentheses): Live births, 507,275 (627,303); deaths, 483,746 (424,399); marriages, 189,273 (215,467). Estimated populations of the chief cities on Jan. 1, 1941: Madrid, 1,088,647 (1,116,722 on Jan. 1, 1942); Barcelona, 1,081,175; Valencia, 450,756; Seville, 312,-123; Zaragoza, 238,601; Malaga, 238,085; Bilbao, 195,186; Murcia, 193,731; Granada, 155,405; Cordoba, 143,296.

Colonial Empire. The principal divisions of the colonial possessions of Spain are listed in the accompanying table. For administrative purposes the Balearic Islands in the Mediterranean, the Canary Islands off the northwest coast of Africa, and the areas of Ceuta and Melilla in North Africa, are considered an integral part of Spain.

| Colony (Capital)   | Sq. mi.                    | Population                    |
|--|----------------------------|-------------------------------|
| Spanish Guinea <sup>b</sup> (Santa Isabel) Spanish Morocco <sup>c</sup> (Tetuán) | 10,124<br>8,108<br>110,036 | 120,000<br>750,000<br>110,038 |
| Total  | 128,570                    | 890,000                       |

<sup>a</sup> Estimated. <sup>b</sup> Includes Rio Muni (on the mainland) and the islands of Fernando Po, Annobon, Corisco, Great Elobey, and Little Elobey. <sup>a</sup> Excluding Tangier (q.v.) which was occupied by Spanish troops on June 14, 1940, and incorporated with Spanish Morocco on Nov. 14, 1940. <sup>a</sup> Includes Rio de Oro, Adrar, and Ifni.

Defense. As of Jan. 1, 1941, Spain had an active army of about 200,000 men, trained reserves of 1,300,000 men with inadequate equipment, an active air force of 5,000 men, and about 5,000 trained air force reserves. There is compulsory two-year military service. The navy consists of 6 cruisers, 13 destroyers, 4 sloops, 6 torpedo boats, 6 minelayers, 6 submarines, and various auxiliary vessels.

Education and Religion. The 1930 census showed 45 per cent of the adult population as unable to read or write. At the end of the civil war in 1939, the Roman Catholic Church was reestablished as the official religion. The religious orders recovered their pre-republican legal status, properties, state subsidies, teaching rights, jurisdiction over cemeteries, and other privileges. In 1935 there were 4,720,260 pupils in 42,766 elementary schools, 130,752 pupils in 111 secondary schools, and 31,905 students in 11 universities.

Production. Spain is predominantly agricultural. Mining, manufacturing, and fishing are important secondary industries. Estimated yields of the chief crops in 1942 were (in metric quintals of 220.46 lb.): Wheat, 29,660,400; oats, 6,556,450; rye, 5,366,894; barley, 18,182,200; corn, 7,025,940; rice, 1,456,340; potatoes, 33,823,100. The production of sweet oranges in 1942–43 was 500,000 metric tons; clive oil, about 200,000 metric tons; wine (in 1943), 16,000,000 hectoliters. Farm animals in 1939 included 2,729,200 cows, 505,300 horses, 1,053,500 mules, 7,373,300 asses, 14,045,100 sheep, 4,076,900 goats, and 2,945,500 swine. Fisheries production in 1941 totaled 442,823,727 kilograms valued at 988,823,729 pesetas.

Mineral production in 1941 was (metric tons):

Mineral production in 1941 was (metric tons): Coal, 9,623,302; lignite, 815,000; iron ore, 1,641,-000; pig iron, 540,000; steel ingots and castings, 684,000; copper, 14,400; lead, 27,453; zinc, 11,-589; tungsten ore, 504 (252 in 1940); manganese ore, 9,923; quicksilver (exports), 1,842 in 1940; aluminum, 3,000 in 1940. The chief manufactures are cotton textiles, paper, glass, cement (1,470,000 metric tons sold in 1940), wood-pulp (output, about 9,000 metric tons in 1940), rayon (7,496,-000 lb. in 1940), explosives, etc.

Foreign Trade. Spain's foreign merchandise trade in 1942, with comparative 1941 figures in parentheses, was (in gold pesetas): Imports, 606,000,000 (549,600,000); exports, 631,200,000 (520,800,000). The 1941 imports included foodstuffs to the value of 137,840,000 gold pesetas; manufactured goods, 170,783,000; raw materials, 127,694,000. Exports included: Foodstuffs, 203,657,000 gold pesetas; raw materials, 111,473,000; manufactured goods, 88,607,000.

Finance. The ordinary budget for 1943 estimated receipts at 9,439,859,796 pesetas (7,869,778,147 in 1942) and expenditures at 9,456,475,296 pesetas (7,880,194,669 in 1942). The War Ministry received 28 per cent of the 1943 appropriations. Total foreign debt on June 30, 1940: 1,200,000,000 pesetas. The total acknowledged public

debt on Jan. 1, 1942, was 28,901,500,000 pesetas. This was exclusive of the Civil War debt to Italy (funded in May, 1940, at 5,000,000,000 lire) and Germany (estimated in 1940 at 300,000,000 marks). The peseta, equivalent to \$0.0913 at the official rate, exchanged at an average nominal value of \$0.0932 in 1940 and \$0.0913 in the first half of 1941.

Transportation. In 1942 Spain had approximately 10,497 miles of railway lines, over 71,600 miles of roads, and air lines connecting Madrid and the other principal cities with Berlin, Rome, the Canary and Balearic Islands, with London and New York via Lisbon, Portugal, and with Tetuán and Melilla in North Africa. The railways in 1940 carried 168,000,000 passengers (about 65 per cent more than in 1939) and 40,500,500 metric tons of freight. In January, 1941, all standard-gage railways were placed under direct Government control. On Jan. 1, 1943, the Spanish merchant fleet aggregated 1,035,000 gross tons. Barcelona, Bilbao, Seville, and Cadiz are the chief ports. During 1942, 2,423 ships entered Barcelona carrying 1,346,000 metric tons of merchandise and 55,000 travelers.

Government. As a result of the Civil War of July 17, 1936, to Apr. 1, 1939, the republic established in 1931 was replaced by a Fascist dictatorship, headed by Gen. Francisco Franco as Leader (Caudillo) of the Empire, Chief of State, Commander-in-Chief of the Army, Premier, and head of the Falange Española (government party), in which were merged all political groups supporting the Franco regime. These pro-Franco groups included the Falangists (Fascists), the Requetes (Carlists), the Clericals, and the Monarchists. All other political parties were outlawed. General Franco exercised his dictatorial powers either directly, or through his Cabinet, or through the governing organs of the Falange Española. The Falange organs consisted of a National Council of about 100 members, representing the various pro-Franco political groups, and a Political Council of 19 which served as the permanent governing board of the party. Franco was President of the National Council and appointed its Secretary-General. The National Council was empowered to determine the structure of both the state and the government party, control syndical organizations, etc. On Sept. 3, 1942, Franco also took over the Presidency of the Political Council from his brother-in-law, Ramon Serrano Suñer, leader of the Falangists. By a decree of July, 1942, Franco reestablished the Cortes (national assembly) on Fascist lines. It included all members of the Cabinet, the governing organs of the Falange Española, mayors of provincial capitals, captainsgeneral of the army, presidents of the academies, and other leading officials and supporters of the regime. For developments during 1943, see below.

## HISTORY

Anti-Axis Trend Accelerated. As described in the preceding Year Book, 1942 saw a slow but perceptible trend within the Franco regime away from both pro-Axis "nonbelligerency" and the cruelly repressive internal policies dictated by extremist elements within the Falange Española. During 1943, this trend was greatly accelerated as a result of the steady progress made by the United Nations in their struggle with the Axis Powers.

The overthrow of Mussolini on July 25 and the collapse of the Fascist regime in Italy had particularly powerful repercussions in Spain. General Franco's Nationalist state had far more in common

with Fascist Italy than with Nazi Germany, and the ease with which Italian fascism crumbled underscored the weakness and impermanence of the Spanish dictatorship. It speeded up the process of disintegration within the Nationalist movementunder way since 1939—and breathed new life into

opposition forces.

Within the regime, the opposition rallied behind the demand for restoration of the monarchy. Not only the monarchists, but also the adherents of capitalism, moderate nationalism, conservatism, and Christian liberalism pressed this solution upon Franco with growing insistence. Meanwhile exiled adherents of the republic, defeated and dispersed in the bitter civil war of 1936–39, launched a vigorous campaign for their return to power under the 1931 republican constitution. There were stirrings, too, among those supporters of the outlawed Leftists parties still in Spain who had survived the civil war and its terrible aftermath.

Falangism "Liberalized." Franco sought by various compromises to conciliate the opposition elements inside the Nationalist ranks without sacrificing his dictatorship or the basic principles of his Falangist state. The new Cortes (national assembly) that Franco had promised on July 17, 1942, convened the following March. The 400 members, sworn in without provision for the presence of the press or the public at large, heard a presidential address by Señor Bilbao condemning liberal regimes and "stupid parliaments" as "fatal instruments of

Spain's decadence.

In December the Secretary-General of the Falange, Gen. José Luis de Arrese, with Franco's approval, announced tentative reforms designed to "liberalize" the regime. He indicated that the armed Falangist militia might be abolished, that the Falange would surrender to the regular police the job of policing the nation, and that the press might be given greater freedom to comment upon "important issues." These measures were considered wholly inadequate by the monarchists and their allies.

Political Amnesty Extended. The Generalissimo also sought to conciliate republican sentiment by successive releases of political prisoners. Four years after the end of the civil war, a decree of March 31 authorized conditional liberty for political prisoners serving sentences of 20 years or less. The prisoners were released in batches after investigation. On August 7 the Falange party organ Arriba announced that Spain was nearing the end of a "sad, repressive period" against the republicans. On September 30 Franco granted liberty to all political prisoners over 70 years of age, and on December 20 he authorized amnesty for prisoners confined five years or more who had behaved well in prison. All releases were conditional on continued good behavior, and none were given to persons guilty of killings other than in battle. Death sentences of 200 political prisoners were commuted on Christmas Day and on December 28 it was officially indicated that 800 others still under sentence of death would receive commutations.

The first official figures on the numbers of political prișoners in Spanish jails were given out December 28 by Angel Sanz, director general of prisons. He said there were 270,719 prisoners on Jan. 7, 1940, and that all except 34,000 had been released, executed, or died in prison by the end of 1943. He indicated that those remaining in jail would be released by the following March.

Symptoms of Unrest. Evidences of persistent internal dissension cropped out with increasing frequency throughout the year. On March 16 the

Government published a law making all "crimes and transgressions that have clear repercussions in public life" the equivalent of acts of rebellion and therefore subject to military trial and the death penalty. The law was announced as a measure for dealing with rumor-mongers, conspirators, unlicensed possessors of firearms, saboteurs including political strikers, and "those who injure persons or cause damage to property with political, social, or terrorist motives.

This harsh decree was promulgated two days after the reported flight to Portugal of about six high Spanish army officers involved in a monarchist conspiracy against the Franco regime. On May 29 it was announced that Col. Valentin Galarza Morante, former Secretary-General of the Falange and chief of the Falangist militia, had been retired from the general staff of the army at his own request. A reputed monarchist, he had been dropped as Franco's Minister of Interior on Sept. 3, 1942 (see 1943 YEAR BOOK). In May and again in June reports reached London of fires and explosions at the Spanish naval base at Ferrol, attributed to saboteurs. Numerous arrests were reported to have

followed these incidents.

Don Juan Breaks with Franco. It was revealed in June that Don Juan, third son of King Alfonso XIII and leading claimant to the throne, had addressed a letter to Franco from Switzerland stating that he would not accept restoration of the monarchy under the existing regime and calling for the adoption of a Spanish foreign policy based on real neutrality. On June 22 a petition for restoration of the monarchy under Don Juan was presented to Franco by 29 members of the Cortes and other prominent figures, including the Duke of Alba, Ambassador to Great Britain. The move was believed to have strong British support. Don Juan, a great-grandson of Queen Victoria, had served in the British navy and was said to have pro-British sympathies.

Franco made a long-awaited public reply to the monarchist demands before the Falangist National Council on July 17. While not opposing the possibility of restoration of the monarchy, he insisted that the monarchy must accept the Falange and its program as "the only just and true solution" of Spain's political problem. Moreover, he declared, the monarchy must never serve as a tool for foreign propaganda. He made it plain that he would tolerate no political attempts to change his Government by monarchist or any other sources. This brought Franco and Don Juan to the parting of the ways. According to a London report of August 30, the Prince demanded Franco's resignation as Chief of State "for the good of Spain." Negotiations for Don Juan enthronement under Franco's auspices were said to have been ended

Falange on the Defensive. The rising tide of opposition to Franco's dictatorship was frankly admitted on October 4 in a government-sponsored broadcast. Quoting the Spanish periodical Español on the subject of "hostile maneuvers" against the Government, the broadcast asserted that "many currents of varied political types, and sometimes even representing political opposites, are all cooperating in a struggle against the legitimate re-

gime.

The Government sought to shatter this newly formed opposition by playing upon the anti-Communist and anti-Masonic sentiments of conservatives and Catholic middle-class elements. On October 31 a semi-official organ announced the discovery of a "Spanish Masonic plot" to overthrow Franco and place Don Juan on the throne as a preliminary to the restoration of the republic. The plot was said to have been organized by Diego Martínez Barrio, former Premier and President of the last Cortes under the Republic. Falangist editorials warned that the overthrow of the Falange and the return of Don Juan were ardently desired

by Communists, Masons, and republican exiles.
This tactic failed to deter the opposition. In mid-November it was announced that eight of the nine lieutenant generals forming Franco's Superior War Council had formally demanded restoration of the monarchy in a letter to War Minister Gen. Carlos Asensio. There were reports of one or two other moves among the army officers to force a fundamental reorganization of the Franco regime. These developments formed the background for the proposals for "relaxation" of the Falange's the proposals for "relaxation" of the Falange's tight grip on Spanish internal affairs, made by Secretary-General de Arrese on December 22.

Neutrality Debate. A major cause for the dissatisfaction among Franco's former supporters was the conviction that a United Nations victory was now assured and that the Generalissimo's pro-Axis nonbelligerency endangered Spain's position in world politics and trade after the conflict. In some quarters it was feared also that Franco's intransigent totalitarianism would facilitate the restoration of the republic and the eventual triumph of the left-

ist cause.

The danger of a German invasion of Spain to attack Allied communications through the Strait of Gibraltar remained acute during the first four months of 1943. This danger gave point to Franco's conciliatory policy toward the Axis as well as to Anglo-American efforts to keep Spain out of the conflict by supplying her with oil and other essential supplies. In a series of speeches during this period, Franco attacked communism and repeated his previous denunciations of liberalism

and democracy.

The progress of Allied offensives in Russia and North Africa led the Franco Government beginning in mid-April to initiate a peace offensive along lines dictated by the interests of both the Axis and the Spanish dictatorship. On April 16 Foreign Minister Gen. Francisco Gomez de Jordana of-fered Spain's good offices in concluding "a speedy and just peace" in order to avert the danger of communism to all countries. This contrasted with the Roosevelt-Churchill demand at the Casablanca Conference in January for "unconditional surrender" of the Axis Powers. In a speech at Almeria on May 9 General Franco declared that it was "senseless to delay the peace" as the war had reached a stalemate and neither side could hope to destroy the other. This was followed on June 5 by publication of the Spanish Government's four-point proposal for "humanizing" aerial bombing, which was now devastating cities.

With the Italian Government on the verge of capitulation, the Franco Government responded to growing pressure for more strict neutrality from within Spain and from London and Washington by announcing unofficially on August 22 that Spain was out of the war "by its own free decision . . . despite movements of sympathy or compassion in certain sections of the population." On October 4 Franco in an address to the Falange National Council substituted the phrase "vigilant neutrality" for the customary "nonbelligerency." This new policy was affirmed when Portugal on October 12 granted Great Britain the use of military bases in the Azores, although Portugal and Spain in 1942 had concluded an agreement to maintain the neu-

trality of the Iberian peninsula.

Neutrality Violations. These affirmations of neutrality were accompanied by continued active aid to the Axis in various ways short of war. A Spanish infantry division of some 14,000 men lost 2,133 men killed up to August 7 in fighting on the Russian front, according to a Madrid report. A considerable part of the division was later repatriated to Spain, but some thousands of Spaniards were incorporated in the German Army at Franco's request and continued to fight the Russians.

Moreover there was strong evidence that Spanish ships were supplying German submarines in the Atlantic, despite repeated denials by official spokesmen of the Franco Government. An open letter charging that Spanish policy was completely favorable to the Axis was circulated in Spain late in the year by supporters of the Spanish rightist leader, José Maria Gil Robles, who was living in Portugal. He accused the Government of giving supplies to German submarines in Spanish waters, of placing bombs in British ships calling at Spanish ports, and of installing wireless stations near Gilbraltar to "advise German submarines of move-

ments of Allied convoys . . ."

The Spanish Government also refused to turn over to the Badoglio Government or the Anglo-American powers a number of Italian warships and merchantmen that took refuge in Spanish ports at the time the Badoglio regime capitulated to the Allies. Spain continued to supply the Reich with tungsten and other vital war minerals in return for promises to pay which seemed increasingly unlikely to be fulfilled. Moreover Franco's Cabinet completed its seizure of the Tangier International Zone on March 4 by taking over from the French Ministry of Posts and Telegraphs the postal, telegraph, and telephone services of Tangier. This latter move brought an "energetic protest" from Gen. Henri Honoré Giraud, then High Commissioner of French North Africa. There was also strong suspicion in Washington that the Franco regime had a finger in the pro-Falangist and anti-democratic military revolt of June 4 in Argentina (q.v.).

Further incidents that occurred late in the year led the British and U.S. Governments to reconsider their conciliatory policy toward Spain. On October 18 the Franco Government sent a message of congratulation to the newly established Japanese puppet regime in the Philippines (q.v.). German agents operating in Spain with Franco's consent made repeated attempts to create trouble between Madrid and the democracies that would react in Germany's favor. These agents were believed to have stirred up Falangist mobs which stoned the British Embassy on several occasions. On November 19 uniformed members of the Falange broke into the British vice consulate at Zaragoza and insulted the vice consul and members of his family. A similar incident occurred in the American Embassy in Madrid December 19. Two members of the Falangist Blue Division, newly returned from the Russian front, invaded the Embassy library, tore down posters, and denounced a number of Spaniards who were reading there.

The Franco Government offered apologies for these incidents, but year-end indications were that the United States and Great Britain were ready to resort to stronger measures to end Spanish assist-

ance to the Axis.

Republican Exiles Organize. Under the leadership of Diego Martínez Barrio, the republican leaders in exile in Mexico began in March to organize a movement for the restoration of the republic. In April Martínez Barrio and Gen. José Miaja, commander of the Republican forces in Madrid during the civil war, journeyed to Montevideo for con-

ferences with other Spanish exiles.

Formation of a united front to proceed with this program was announced in Mexico City November 21 by representatives of the four leading Spanish Republican parties—the Socialists, Izquierda Re-publicana, Union Republicana, and the Catalan Esquerra Republicana and Acción Catalana. On November 26 a Spanish Committee of Liberation was formed by members of these parties to seek United Nations' support for restoration of the republic. Martínez Barrio was named head of the Committee and Indalecio Prieto, Socialist leader, secretary. On December 23 the Committee appealed to the United Nations Governments to permit a meeting of the Republican Cortes to "accelerate the restoration of the Spanish Republic." Of the 450 members of the last Republican Cortes, 102 were in Mexico, at least 126 were known to have died, and the remainder were scattered throughout Latin America and Europe. Deputies of the right-wing Accion National party were in exile with Gil Robles in Portugal.

The Spanish Committee of Liberation excluded from its united front the Spanish Communist party, the Syndicalists, the Federal Republican party (a dissident Socialist faction), the Catalonian Unified Socialists, and the Basque Nationalists. Representatives of these groups were reported to be op-posed to the plan for convoking a session of the Cortes in Mexico. All of the pro-democratic re-publican parties were apparently opposed to restoration of the monarchy and some of their repre-resentatives were strongly critical of Anglo-Ameri-

can policy toward Spain.

See Argentina, Cuba, Germany, Great Brit-AIN, MOROCCO, PERU, PORTUGAL, and TANGIER under History; BRIDGES; RAPID TRANSIT; REFU-GEES; SPANISH LITERATURE.

SPANISH-AMERICAN LITERATURES. Since the outbreak of the Spanish Civil War, in the summer of 1936, we have had great difficulty in receiving literary works for the annual articles on Spanish-American Literatures and Spanish Literature. Spanish refugees in Mexico have found a warm welcome and help in continuing their literary labors. The Mexican Government favored the establishment of La Casa de España en México, Fondo de Cultura Económica, and El Colegio de México. These institutions have devoted themselves to publishing, and republishing, important works, which have finally reached us, and we give an account thereof under Mexico, in this same article,

and under Spanish Literature.
Of general interest are the following titles: Dudley Fitts, Editor, Antología de la poesía americana contemporánea; Anthology of Contemporary Latin American Poetry (226 poems, 95 authors, representing all Latin American republics and Puerto Rico with unrhymed translations of all poems printed beside the originals); Samuel Cuy Inman, Latin America: Its Place in World Life (by an author who, for 30 years, has held constant communion with leaders of thought in all the countries

of the continent).

Argentina. Francis Herron's Letters from the Argentine is a refreshing book by a provincial North American newspaper editor writing from and about provincial Argentina, after living there for nine months. Books have not reached us from Argentina in any satisfactory numbers but we list what we have received.

Drama. Eugenio Navas, Federico García Lorca

(a very emotional play, based on the execution of the Granadine poet by the Falangists in 1936). Erudition. Alfredo Coviello, Una página de his-

toria en la naciente filosofía argentina, y otros ensayos críticos (eight philosophical essays, including a tribute to the great Argentine philosopher, Alejandro Korn); Newton Freitas, Ensayos Americanos (twenty essays on writers, beginning with the author's friend, the recently deceased Ecuado-

rian story teller, José de la Cuadra).

Fiction. María Villarino, Pueblo en la niebla (short stories with regional backgrounds); Arturo Lorusso, Fuego en la montaña (a novel finished in 1933, which won an Argentine national prize in 1937, and is now published by Zig-Zag in Chile for continental circulation). Carlos María Ocantos, Entre Naranjas (the second novel of the second series of Novelas Cortas by the Argentine former diplomat who still lives in Spain), and El Avionema del Diablo, (third in the second series of Novelas Cortas).

Verse. Carlos Obligado, Los poemas de Edgar Poe, Traducción, prólogo y notas (a splendid piece of work); José Pedroni, El pan nuestro (sober, beautiful poems, full of human sympathy).

Bolivia. Erudition. Enrique Finot, Historia de la Literatura Boliviana from its origins to the present -an excellent piece of work. Adolfo Costo du Rels, L'oeuvre spirituelle de la France, published in Lyons, which won a 10,000-franc prize from the French Academy.

Fiction. Porfirio Díaz Machicao, Vocero (a splendid novel about a man who founds a newspaper in order to be the mouthpiece of justice and who is set upon by every influence that wishes to

hide wrongdoing).

Chile. Erudition. Gmo. Rojas Carrasco, Chilenismos y Americanismos (1,504 words studied in their relation to Spanish and to Spanish-American speech, dedicated to the prince of Chilean philologians and lexicographers, Miguel Luis Amunategui y Reyes); Eduardo Solar Correa, Las Tres Colonias (a very important posthumous work by the great historian, who found, in the three centuries of colonial rule, three distinct sets of social conditions); Arturo Torres-Rioseco, Seis Novelistas de la ciudad (second volume of his Grandes novelistas de la América hispana, the first having treated Novelistas del campo); and The Epic of Latin-American Literature, a very fine and mature piece of work which treats Latin-American literature as a unit developed by the same mass set of circumstances.

Fiction. Alberto Blest Gana, Durante la reconquista, 2 volumes (the author's last and probably his best novel); Luis Henríquez Castillo, La Octava maravilla (a thesis novel); Mari Yan, Las Cenizas (a novel in which the authoress, true to form, justifies the statement by Carlos Reyles that she "transforms this sordid, vulgar world into a resplendent world of artistic meaning"); Armando Zegri, La Mujer Antiséptica (a careful, kindly, objective study of United States character).

Verse. Pablo de Rokha, Morfología del espanto (which, continuing the style shown in his first book Gran temperatura, is stimulating although contra-

dictory)

The Chilean Academy is always very active. The Boletín de la Academia Chilena, Correspondiente de la Española, Tomo VIII, Cuadernos XXIX y XXX, contains valuable reports on the academy's recent activities, reception of new Members, with their Reception Discourses, and a tribute to the Academy's Director, the beloved scholar Miguel Luis Amunátegui y Reyes.

Colombia. Erudition. Antonio Gómez Restrepo,

Historia de la Literatura Colombiana, Vol. III, completed, despite increasing difficulty with his sight, by the learned diplomat, poet, scholar, and academician. This third volume brings us down to Dona Josefa Acevedo de Gómez, the poetess (1803-61). The fourth and concluding volume is already on the way.

Costa Rica. Drama. Alfredo Saborío Montenegro, La Virgen de Los Angeles: auto místico; and Juan

Santamaría: drama heróico.

Erudition. Mary B. MacDonald and Dwight H. McLaughlin, Vida y Obras de Autores Puertor-

riqueños, Tomo I.

Cuba. Erudition. The Archivo José Martí continues publishing and we have received numbers five and six. Orestes Ferrara, Mis relaciones con Máximo Gómez is a fine example of personal memoirs. Emilio Menéndez, Tres Reflexiones sobre el amor, contains essays on love, ontologically, popular application de la considerad. chologically, and sociologically considered. Fernando Ortiz for many years has been interested in the welfare of the Negroes in Cuba; this has led to his being selected by the authorities in the Pan-American Union to write number seven (October, 1943) of "Points of View," published by the Division of Intellectual Cooperation. The specific title assigned him was, "On the Relations between blacks and whites

Fiction. Lino Novás Calvo, Un dedo encima (cuento that won first prize in the Hernández-Catá competition for short stories) and La Luna Nona (a collection of short stories, some of the best of which recognize Cuba's heritage from the Negro

The Academia Nacional de Artes y Letras de Arades un to December, 1942. Cuba has brought its Anales up to December, 1942. As usual there is much of importance to be found in its pages. This Academy is always very active in all its five sections.

Dominican Republic. Erudition. Pedro Enríquez Ureña, El español en Santo Domingo (a careful study of the Castilian language as developed in the Dominican Republic).

Verse. Hector Incháustegui Cabral, Rumbo a la otra Vigilia (somewhat violent, but attractive,

verse).

Academia de la Historia. With its nonagenarian director, the beloved Don Federico Henriquez i Carvajal at the helm, the academy's official bimonthly review Clio appears regularly and carries its usual quota of documentary material concerning the past history of the Dominican Republic and also of other nationalities in the West Indies.

Ecuador. Erudition. Francisco Javier Eugenio de Santa Cruz y Espejo, El Nuevo Luciano de Quito (Biblioteca de Clásicos Ecuatorianos), the literary essays of an 18th century physician; Augusto Arias, Literatura General, a book for secondary schools by a real poet and a cultured essayist.

Fiction. G. Humberto Mata, Sanagüín, a novel dealing with the Indian problem in such countries as Peru, Ecuador, and Bolivia, laying bare stark

cruelty.

Verse. Pablo H. Vela Egüez, El Arbol que canta

(Poesías).

Guatemala. Erudition. Rafael Arévalo Martínez, Nietzsche el Conquistador (La doctrina que engendró la segunda guerra mundial), analysis and exposition of Hitler's interpretation of Nietzsche and Hebbel, as compared with the doctrine of Christ, and Influencia de España en la Formación de la Nacionalidad Centroamericana, a study of Christian influence in the ideals of Central America; José María Bonilla Ruano, Mosáico de voces y locuciones viciosas, 288 poems using words that are unacademic, which are explained in footnotes; David Vela, Literatura Guatemalteca, containing "Notas de prólogo" by César Brañas.

Fiction. Flavio Herrera, El Tigre, a strong, powerful picture of Guatemala: the land and all that composes it is "El Tigre."

Mexico. The following works were published under the auspices of La Casa de España en México, Fondo de Cultura Económica, and El Colegio de México. The works are all of real worth. Danzas populares mexicanas: Danzas de los Concheros en San Miguel de Allende (with historical study, by Justino Fernández; collection of musical texts and modern transcriptions, by Vicente T. Mendoza; and eight illustrations full page by Antonio Rodríguez Luna); Genaro Estrada, Bibliografía de Goya (a work already well known in MS. form, unfinished because the author became blind and later died; published as he left it); Francisco Giner de los Ríos, Pasión Primera y Otros Poemas (dainty verse, the title poem being devoted to the author's first poem); J. B. Iguíniz, Disquisiciones Bibliográficas, (important information concerning important personages, books, newspapers, and libraries); Adolfo Menendez Samará, Fanatismo y Misticismo-Su valor social—y Otros Ensayos (a study of the difference between the mystic and the fanatic); J. M. Miquel y Vergés, La Independencia Mexicana y la Prensa Insurgente (a study of the role played by the insurgent press in the Mexican War for Independence); Carlos Pellicer, Recinto y Otras Imágenes (erotic verses); Alfonso Reyes, Pasado Inmediato, y otros ensayos (charming, scholarly chats about Spanish and Spanish-American literary matters and literary personalities); also by the same author, *La Antigua Retórica* (not a continuation of the earlier La Crítica en la Edad Ateniense, but a further development along a different line), and Capítulos de Literatura Española (fourteen chapters on outstanding authors and works); Justo Sierra, Evolución Política del Pueblo Mexicano, (2d. ed., with prologue by Alfonso Reyes); Julio Torri, De Fusilamientos (brief sketches, with sardonic tone, on firing-squad executions, and other incidents, well-observed, of Mexican life); Rodolfo Usigli, Itinerario del Autor Dramático, y otros ensayos (exposition of the problems of the teatro in all its aspects from writer to producer, actor, and public); Xavier Villaurutia, Textos y Pretextos [Literatura, Drama, Pintura] (by the outstanding prose writer, poet, and critic, of the group called "Contemporáneos"); Silvio Zavala, Ideario de Vasco de Quiroga; Leopoldo Zea, El Positivismo en México.

Other Mexican works that have reached us from

other sources are as follows:

Drama, Xavier Villaurutia, Autos Profanos (five

short plays).

Erudition. Ermilo Abreu Gómez, Heroes Mayas: Zamná, Cocom, Canek (beautiful treatment of the early Mayan legends and incidents of their contact with the representatives of Christianity); Gerard Decorme, S. J., La Obra de los Jesuistas Mexicanos durante la época colonial, Tomo 2 (a very important work); José Romano Muñoz, El secreto del bien y del mal, 2d. ed. (a fine textbook on philosophy). Ezequiel Padilla, Tres discursos en Rio de Janeiro (speeches delivered by the Mexican Minister of Foreign Affairs at the Pan-American Conference held in Rio in January, 1941); Samuel Ramos, Historia de la Filosofía en México (a panoramic survey of Mexican philosophy from the Aztecs to the present); Alfonso Reyes, La Experiencia Literaria, and Ultima Tule (exquisite, profound essays, considering the Americas not as continents but as an aspiration); Darío Rubio, El Nacional Monte de Piedad; lo que fué en sus orígenes; lo que ha sido en su desarrollo; lo que es en la actualidad, (historical account of a valuable institution of Mexican

life, founded in 1775).

The Secretariat of Public Instruction has begun a series El Pensamiento de America, of which four volumes have reached us: I.—Vasconcelos, presenting a great Mexican thinker; II.—Marti, a great Cuban; III.—Montalvo, a great Ecuadorian; IV.—Rodó, a great Uruguayan. Octavio Vejar Vázquez, Secretary of President Manuel Avila Camacho, in the field of education, has issued several important tracts in that field: Mensaje a la Nación Méxicana; Carta a la Madre y al Maestro; Hacia una escuela de Unidad Nacional; La Escuela Méxicana, y Los Problemas de la Guerra y de la Paz, (Palabras a los jóvenes); La Esencia de la Educación Mexicana.

Fiction. José Revueltas, El Luto Humano, adjudged the best novel written by a Mexican in the recent Concurso Latino-Americano de la Novela.

Verse. Xavier Sorondo, Estamperías de Torería, ten poems descriptive of sundry phases of the bullfight, each accompanied by a telling illustration by

Ruano Llopis.

Nicaragua. Erudition. The Revista de la Academia de Geografia e Historia de Nicaragua, Tomo V, No. 1, contains interesting materials concerning the diplomatic relations between the United States of America and Nicaragua, also concerning the last activities of Gen. Francisco Morazan and several chapters, by M. A. Alvarez, concerning Los Filibusteros en Nicaragua, William Walker among them.

Panamá. Erudition. Antología del Canal, 1914–1939, is a history of the Panama Canal from its inception under DeLesseps until 1939, with nu-

merous maps and illustrations.

Peru. Erudition. Luis Alberto Sanchez, Un Sudamericano en Norte America—Ellos y Nosotros (an unusually well-balanced book that will do good to both the southern and the northern phases of Pan Americanism); and El pueblo en la revolución Americana (a profound study of what underlay the whole revolutionary movement of the continent—restlessness of leaders and of the people: a real contribution to Spanish-American history); Federico Schwab, Bibliografía Etnológica de la Amazonia Peruana, (1542–1942), some 500 items accumulated before the National Library of Peru suffered its second complete destruction, this time by fire.

Fiction. Arturo D. Hernández, Sangama, (a long, but thrilling novel of the Amazonian jungle, which is the chief character of the novel, illustrated by

Alejandro Torres).

Puerto Rico. Erudition. José A. Balseiro, El Vijía, Ensayos, Tomo III (Biblioteca de autores puertorriqueños); Tomás Blanco, Prontuario histórico de Puerto Rico (awarded first prize of the Institute of Puerto Rican Literature); Vicente Géigel Polanco, El despertar de mi pueblo (in which the author is more confident than in previous books on the subject that the people of Puerto Rico are awake to their destiny); Samuel R. Quiñones, Temas y letras (a useful volume on Puerto Rican literary achievements).

Fiction. Enrique A. Laguerre, El 30 de Febrero, vida de un hombre interino, (Biblioteca de Autores

Puertorriqueños).

Verse. Evarista Ribera Chevremonte, Tonos y formas (Biblioteca de Autores Puertorriqueños), Poesías. Carlos Vallejo(h.), Versos de Montelila. Uruguay. Erudition. Samuel Ramos (editor), Rodó; Prólogo y selección (a welcome addition to

the available material concerning Uruguay's profound thinker and exquisite stylist); Victor Pérez Petit, Las tres catedrales del naturalismo (Volume V, of the Obras Completas published by the nation, treating the Goncourts, Zola, and Daudet), also Lecturas, essays on Spanish writers, and De Weimar a Bayreuth, (two very stimulating and fascinating studies).

The President of Uruguay has asked the Minister of Public Instruction to organize a Uruguayan Academy of Letters to consist of twenty prominent Uruguayan literary men and one woman, Juana de

Ibarbourou.

Venezuela. Drama. Aquiles Certad, "Lo que le faltaba a Eva" (a modern three-act comedy set in Caracas); Antonio Guzmán O., De ayer a hoy, (a play by a laborer "done in moments stolen from his hours of rest," who claims the play is not merely a picture of misery and prostitution, but of the action of the bourgeoisie during the period of Dictatorship).

Erudition. Antonio Reyes, Caciques aborígenes venezolanos (careful study of the Indian population and its folk-lore, beautifully illustrated); Oscar Rojas Jiménez, Tierra y hombres (reportajes

líricos).

Fiction. Arturo Croce, Chimó y Otros Cuentos (realistic scenes from Venezuelan peasant life by a young poet, published in the fine series Cuadernos Literarios de la Asociación de Escritores Venezolanos); Alejandro García Maldonado, Uno de los de Venancio (a story laid in the early days of Venezuela when conditions of life were like the rip-roaring days of our Far West).

Verse. Francisco Caballero Mejías, Selección

Verse. Francisco Caballero Mejías, Selección Poética (Asociación de Escritores Venezolanos. Cuadernos Literarios No. 30.) See Coordinator

OF INTER-AMERICAN AFFAIRS.

JOHN D. FITZ-GERALD.

spanish guinea. A Spanish colony on the Gulf of Guinea, West Africa, comprising two districts: (1) the island of Fernando Po (810 sq. mi.) and (2) Continental Guinea, made up of the mainland area of Rio Muni (9,470 sq. mi.) together with the archipelago of islands from Great Elobey to Little Elobey and Corisco and the island of Annobon. Total area, 10,424 square miles. Total population (1940 estimate), 120,000. Chief towns: Santa Isabel, the capital (on Fernando Po), and Bata, a seaport and principal town of Rio Muni.

Production, etc. Chief products: cocoa, palm oil, coffee, sugar, tobacco, indigo, vanilla, kola nuts, and timber (ebony, oak, logwood, mahogany). Roads (1940): 304 miles. The colony is administered by a governor general, assisted by a deputy governor and a secretary general. Each of the territories into which the colony is divided (3 for Fernando Po and 10 for Continental Guinea) is

under a territorial administrator.

spanish literature. World conditions during 1943 made it more difficult than ever to assemble materials for such articles as these. We mention what we have received, with no pretension of covering the field adequately.

For information about the first Spanish works that we list, see the opening remarks in the article Spanish-American Literatures; Mexico. The following, listed alphabetically by authors, are the Spanish works published through the patronage and kindness of the Mexican Government under the three agencies mentioned (La Casa de España en México, Fondo de Cultura Económica, and El Colegio de México):

J. de Acosta, Historia Natural y Moral de las Indias (an important work by a Jesuit missionary who succeeded, in 1571, in having himself sent to the New World); J. Bal v Gay, Romances y Villancicos españoles del siglo XVI, dispuestos en editional del siglo XVI, dispuestos en editional del siglo XVI, dispuestos en editional del siglo XVI. ción moderna para canto y piano. Primera Serie (dedicated to the Mexican composer, Carlos Chávez); Fray Bartolomé de las Casas, Del único modo de atraer a todos los pueblos a la verdadera re-ligión; E. Díez-Canedo, El Teatro y sus enemigos (a charming book of personal recollections of the birth of moving pictures); J. J. Domenchina, Poesías escogidas (1915–39); J. de la Encina, Goya: su mundo histórico y poético; J. Gaos, La Filosofía de Maimónides (a lecture given in 1935 on the seventh centennial of the birth of the philosopher); J. Gaos-Francisco Larroyo, Dos ideas de la filosofía (resulting from a friendly competition between the professor from the Universidad Central of Madrid and the professor of the Universidad de of Madrid and the professor of the Universidad de México); J. Gaos, Antología Filosófica-La Filosofía Griega (first of a series which is to include anthologies of all Occidental philosophy); P. Garfias, Primavera en Eáton Hastings (beautiful verse with a tinge of melancholy hinted at in the words, "Estitate de Include anthologies of Adaptive de Control of the Professor de Control of the Prof crito en Inglaterra durante los meses de Abril y Mayo, de 1939, a raiz de la pérdida de España"; Juan Ginés de Sepúlveda, Tratado sobre las justas causas de la guerra contra los Indios (2d. ed., with prologue by M. Menéndez y Pelayo, and study by M. García-Pelayo, an important document in attractive new dress). David Hume, Diálogos sobre religión natural (Spanish translation by Edmundo O'Gorman, with prologue by Eduardo Nicol); Edmundo Husserl, Meditaciones cartesianas (with prologue and translation by José Gaos); Ramón Iglesias, Cronistas e Historiadores de la Conquista de México (Ciclo de Hernán Cortés); Benjamín Jarnés, Cartas al Ebro (philosophical letters on sundry things); León-Felipe, El Payaso de las Bofetadas y el Pescador de Caña: Poema Trágico Español; and El Hacha, Elegía española (the profits from which will be given to help Spanish refugees in France); and El Gran Responsable (Grito y Salmo)—all three works produced out of the heartache of Spain; Otto Mayer-Serra, Panorama de la Música Mexicana, desde la Independencia Hasta la Actualidad (first hand investigations to secure materials for an ultimate real history of the music of Mexico); J. Medina Echavarría, Sociología: Teoría y técnica, and Panorama de la Sociología Contemporánea (two studies by a former professor of the University of Murcia); Agustín Millares Carlo and A. Gomez Iglesias (two professors of the Universidad Central of Madrid), Gramática Elemental de la Lengua Latina, 2d. ed. by A. Millares Carlo, A. Millares Carlo, Antología Latina, Tomo I, Prosistas—Pri-mera Parte (the first edition of which appeared, in part, in Valencia, Spain) and Nuevos Estudios de Paleografía Española; Ernest Moore, Bibliografía de los Novelistas de la Revolución Mexicana; J. Moreno Villa, Locos, Enanos, negros y niños palaciegos-Siglo XVI-Gente de Placer que tuvieron los Austrias en la Corte Española desde 1563 a 1700 (a manuscript completed as shrapnel came through the windows of the Archivo); also, Cornucopia de México (describing the sensations Mexico has produced in the author during two years of residence—a charming book); also La Escultura Colonial Mexicana (with 138 full-page plates); Eduardo Nicol (ex-professor in Barcelona, now professor in the National University of Mexico), Psicología de las Situaciones Vitales; J. Roura-Parella, Educación y Ciencia (a wide view of education as a sector of the life of a people, a function

of culture); Adolfo Salazar, Música y Sociedad en el Siglo XX; plus Las Grandes Estructuras de la Música (El Templo—La Escena—El Pueblo); also Forma y Expresión en la Música; and La Música en la Sociedad Europea, desde los primeros tiempos cristianos, Vol. I; Rafael Sánchez de Ocaña, Reflejos en el Agua (a former diplomat writing in whimsical vein and exquisite style); Adam Smith, Teoría de los Sentimientos Morales, Introducción de Eduardo Nicol; Traducción de Edmundo O'Gorman; Joaquín Xirau, Amor y Mundo; María Zambrano, Pensamiento y poesía en la vida española (keen analysis of Spanish life as it was, as it now is, and as it may become).

Other Spanish works that have reached us direct

from Spain are:

Drama. Manuel y Antonio Machado, La duquesa de Benameji, La prima Fernanda, and Juan de Mañara (three fine, healthy plays, by the two brothers in collaboration, almost wholly in verse); José María Pemán, El testamento de la Mariposa

(cuento maravilloso en tres actos).

Erudition. Alberto Insúa, Evocación de Hernández Catá (a tribute by the Spanish novelist to the Cuban storyteller, essayist, and diplomat); Baltasar Gracián, Agudeza y arte de ingenio (modern edition of a great Spanish classic); Azorín, El escritor (beautiful and important book treating a variety of literary subjects); Salvador de Madariaga, Spain (analysis of events leading to Spain's condition today and her hopes for the future); condition today and her hopes for the ruthe; Allan Chase, Falange (analysis of Spain and Spanish America in world ideology of today); Jiménez de Asúa, La Constitución política de la Democracia española (by a member of the committee appointed by the Provisional Government of the Spanish Republic to draw up a new constitution, setting forth the difficult problems involved and how they were handled—a "must" book for all who would really understand the movement); Matilde Carranza, El Pueblo visto a traves de los Episodios Nacionales [de Benito Perez Galdós]; José María Pemán, El Paraiso y la Serpiente-Notas de un viaje por tierras de la Hispanidad (a notebook of observations by an Academician); Ramón Menéndez Pidal, Manual de Gramática Histórica Española Sexta edición, corregida y aumentada (6th ed., a welcome addition to our materials for study and for use in teaching and in seminars); Eduardo Benot, Arquitectura de la Lenguas, 3 tomos (a carefully revised edition of this standard work on Linguistics); Poema del Cid—reprinted from the Unique Manuscript at Madrid, with Translation and Notes by Archer M. Huntington (a reproduction in one volume of the original 3 vol. edition of 1907–08, which was never accessible to the ordinary student because of its price).

Fiction. Ramón Gómez de la Serna, Los muertos, las muertas, y otras fantasmagorias; Ramón J. Sender, Crónica del Alba (a novel of a boy's world, filled with tenderness, idealism, and humor); José María Pemán, Señor de su ánimo (novela).

Verse. Salvador de Madariaga, Rosa de cieno y ceniza contains miscellaneous verse, rhetorical lyrics, romances, poems in English, exercises in French, and some translations from English classics. José María Pemán, Poesía, Antología (1917–41) is by a young academician (born in 1898) who has written prose and verse, fiction and drama, and erudition, has won several literary competitions, and is an orator of unusual force and a journalist.

Necrology. The Spanish Royal Academy of the Language early in 1943 suffered a grievous loss in the death of Francisco Rodríguez Marín, the great authority on Cervantes and Don Quijote, as well as

an outstanding authority on Spanish folklore. He was born Jan. 27, 1855, and studied for the profession of law, which he practiced in Osuna and in Sevilla. His avocation was literary research and publication. He became a member of the Real Academia Sevillana de Artes y Letras, and later (1897) a Correspondiente in Sevilla of the Real Academia Española. He gave up practicing law and moved to Madrid, and in 1905 was elected a Member of the Real Academia Española, taking his seat in 1907. Upon the death of Marcelino Menéndez y Pelayo, Rodríguez Marín was appointed to succeed him as National Librarian. In the Royal Academy, he was elected Inspector of Publications in 1912 and Bibliotecario Perpétuo in 1923. In 1940 he was appointed Director and served until his death. Many outstanding honors had come to him from his own and other countries.

STATE, U.S. Department of. The Department of State continued in 1943 its manifold activities directed, in the field of foreign relations, toward the defeat

of this country's enemies and the establishment of

a secure and just peace.

The outstandingly successful Moscow Conference of October 19–30, in which Secretary of State Cordell Hull participated as the United States representative, adopted a four-power declaration on postwar security and other declarations on justice and democracy after the war. The Department took the initiative on behalf of this Government in bringing together representatives of the United Nations, and those associated with them in the war, at two Conferences in the United States: the United Nations Conference on Food and Agriculture held at Hot Springs, Va., in May, and the First Session of the Council of the United Nations Relief and Rehabilitation Administration held at Atlantic City, N.J., in November. (See United Nations.) Important duties were carried out by the Department in connection with President Roosevelt's meetings abroad with heads of foreign governments, and arrangements were completed through neutral intermediaries for an exchange of enemy nationals in which approximately a thousand American civilians were repatriated from the

Edward R. Stettinius, Jr., former Lend-Lease Administrator, succeeded Sumner Welles as Under Secretary of State. He took the oath of office on

Oct. 4, 1943.

Many of the higher officers of the Department are serving on international and interdepartmental commissions, committees, and boards concerned with the conduct of the war and the study of postwar problems. In the program of psychological warfare, for example, the Department, through its Division of Current Information, the Division of Cultural Relations, and the geographic divisions (Divisions of Far Eastern Affairs, Near Eastern Affairs, and European Affairs, and the Division of the American Republics), works in liaison with other Government agencies in the war-information field and furnishes advice to those agencies based on information assembled by the Department and its officers abroad.

The Department coordinates in the field of foreign relations the many complex war activities of other agencies and, in large part, furnishes the means of carrying out these activities so far as they require action in foreign countries by the U.S. Foreign Service. The offices of the Foreign Service have necessarily become the headquarters or centers of American wartime activity in the countries with which the United States maintains diplomatic relations. Legations of the United States in Canada and in seven of the American republics were raised to the status of Embassies during 1943. An Auxiliary Service has been created on a temporary basis to supplement the permanent staff of the Foreign Service in handling new responsibilities created by the war and in serving other Government agencies.

Functions of the Department relating to those aspects of economic warfare and foreign relief not involving questions of foreign policy were transferred in November, 1943, to the newly established Foreign Economic Administration (q.v.). The organization of the Department as of Jan. 1, 1944, consisted of the following offices, divisions, etc.:

1. The Secretary of State, the Under Secretary of State, four Assistant Secretaries of State, a Legal Adviser, an Executive Officer, four Advisers on Political Relations, an Adviser on International Economic Affairs (position vacant), and an Associate Adviser on International Economic Affairs; an Assistant to the Secretary of State and five Special Assistants to the Secretary of State; three Special Assistants to the Under Secretary of State and a

Liaison Office directly supervised by the Under Secretary; a Committee on Political Planning and a Committee on Special Studies; and a Special Consultant and a General

Consultant.

2. Four divisions charged with responsibility for the relations of the United States with particular regions of the world, namely, the Divisions of the American Republics, of European Affairs, of Far Eastern Affairs, and of Near Eastern Affairs. Mention may also be made here of the Office of Philippine Affairs and the Caribbean Office. The last-named office includes the United States Section of the Anglo-American Caribbean Commission.

3. The following offices which are concerned with the personnel and phases of the activities of the Foreign Service: Division of Foreign Service Administration, Foreign Service Buildings Office, Office of Foreign Service Furnishings, Foreign Service Officers' Training School, Board of Foreign Service Personnel, and Division of Foreign Service Personnel.

eign Service Personnel.

eign Service Personnel.

4. Some twenty-odd technical, advisory, and administrative divisions and offices, as follows: Division of Accounts, Office of the Chief Clerk and Administrative Assistant, Division of Communications and Records, Office of Coordination of Communications and Records, Office of Coordination and Review, Division of Cultural Relations, Division of Current Information, Division of Departmental Personnel, Division of Economic Studies, Financial Division, Office of Fiscal and Budget Affairs, Division of Foreign Activity Correlation, Office of the Geographer, Division of International Communications, Division of International Communications, Division of International Communication, Office of the Petroleum Adviser, Division of Political Studies, Division of Protocol, Division of Research and Publication, Special Division, Translating Bureau, Central Translating Office, Office of the Editor of the Treaties, Treaty Division, Visa Division, and Division of World Trade Intelligence.

The above organization was effective throughout the year 1943. On Jan. 15, 1944, the State Department was reorganized, and thereafter the divisions charged with responsibility for the relations of the United States with particular regions of the world were: Office of American Republic Affairs, Office of European Affairs, Office of Far Eastern Affairs, Office of Eastern and African Affairs, and Office of Special Political Affairs. Other phases of the Department were organized under the Offices of Foreign Service Administration, Departmental Administration, Public Information, Economic Affairs, Wartime Economic Affairs, Transportation and Communication, and Controls.

STATE-FEDERAL CONTROVERSIES. See EDUCATION; Law under Decisions Concerning the Federal System; also (re soldier vote) United States.

STATE LEGISLATION. The legislatures of forty-four States met in 1943 in regular session. The four exceptions were Kentucky, Louisiana, Mississippi, and Virginia. This marks the first year in our history therefore, that so many legislatures have assembled and adjourned with the nation actively engaged in

The difficult problems of the war and the equally perplexing ones of the postwar years appeared to be the strongest factors determining the form taken by the bulk of the 1943 legislative product. To a large extent laws affecting normal peacetime concerns of the States—such as labor, welfare, housing, taxation, interstate relations, and transportation—were shaped by war and postwar needs. The same considerations led the legislators to curtail their deliberations as much as possible with the result that the 1943 sessions, on the whole, were the shortest in recent history and the number of bills submitted and studied was the least.

War and Postwar Legislation. Every legislature meeting in 1943 considered and passed laws dealing with various aspects of the war. Many of them acted to clothe their governors with large grants of authority to dispose of emergency war situations. In some cases, the governors are to act in concert with war or defense councils. Alabama, California, Connecticut, Delaware, Iowa, New Hampshire,

Pennsylvania, Vermont, and Washington are among the States which passed laws of this kind. In 15 States, including seven of those mentioned, extraordinary powers covering the authority to alter highway rules and regulations were granted to the governors who are to exercise these powers, in most cases, in cooperation with the State highway boards. The trend toward a stronger wartime State executive was forecast by similar laws passed during 1942 in Maine, Massachusetts, New Jersey, New York, and Rhode Island.

Civilian defense also received considerable attention. Although all of the States had defense agencies operating by the close of 1942, the 1943 legislatures in some cases, notably in Alabama and California, reconstituted them. Civilian defense was involved also in Nevada's creation of a State police force and in Colorado by the authorizing of a State Guard to replace the National Guard called into Federal service. Uniform blackout regulations for protection against enemy action resulted from a tri-State accord between California, Oregon, and Washington, and with Federal authorities. The California legislature pioneered in another direction by becoming the first to provide a system of compensation for civilian defense volunteers.

Most of the housing laws-of which some 140 were submitted in about 40 States—considered in 1943 were concerned with wartime problems. Twenty-eight States passed enabling legislation to permit existing housing authorities to engage in war housing; in six other States such bills were introduced but failed of passage. Nine States authorized local housing authorities to open public housing projects to occupancy by war workers, while county and regional housing authorities were authorized in six States and the area of operation of existing authorities extended by the legislatures in five others. On the State level, a State Housing Authority was set up in Connecticut and the office of State Director of Housing in Georgia.

An entire category of laws benefits persons in the armed forces. These laws cover a wide range of subjects ranging from the granting of special benefits, privileges, and exemptions to the reinstatement of ex-service men returning into civilian life. The most common type is that which safeguards the equity of service men in unemployment compensation funds. With the passage of laws in 1948, all of the States but Louisiana and New Mexico had perfected amendments to their unemployment compensation statutes eliminating penalties which would otherwise be charged against service men for time spent in the armed forces.

The jobs of service men are protected by 1943 laws of three States-Nevada, Rhode Island, and Utah. The Rhode Island law provides penalties for an employer who refuses to restore a job to a member of the armed services if the member applies within forty days of discharge and the em-

ployer is able to rehire him.

At least 36 States in 1943 modified their income, property, license, or poll tax provisions to benefit service men. The income tax law was thus altered in 16 States; the property tax law in 16 States; licensing provisions, chiefly relating to professional and business fees or to motor vehicle licenses, were changed in 26 States; and the poll-tax law in 9 States. In addition, Tennessee's legislature repealed its poll tax entirely, but the supreme court in that State held the repeal to be unconstitutional (Biggs v. Beeler). These amendatory laws vary widely but the ultimate purposes of such legislation are the same—to ease the tax burden on service men while they are in service and to facilitate their reentry into civilian life and occupation after discharge. Similar motives are behind the adoption in many States of simplified procedures under which service men, particularly those overseas, may have legal instruments acknowledged and

proved.

Many States sought to benefit their sailors and soldiers through guarantees of their voting rights, not only through poll-tax modification but by alteration of registration provisions and other electoral procedures. Absentee voting was made possible in Delaware when the 1943 legislature endorsed a measure passed by the preceding legislature, thus amending the State's constitution. The widespread movement to lower the voting age from 21 to 18 was, in part, espoused as an obligation owed to those in service. Only in Georgia was the effort successful in meeting legislative approval. In a general election on August 3, the voters endorsed the action of their legislators and ratified the 18year-old voter measure as an amendment to the State constitution. Georgia thus became the first State to take such action.

Other benefit measures adopted include veterans' rehabilitation funds set up in North Dakota, Oregon, and Wisconsin; educational provisions in California, Montana, Oregon, and South Dakota; bonus laws passed by Vermont and New Hampshire; provisions for free higher education of veterans children in New Hampshire, North Carolina, and West Virginia; a fund for the purchase by discharged veterans of farms and homes in California; and acts granting veterans and disabled service men the same rights enjoyed by the same groups after World War I, including "preference" in obtaining public employment, passed in many of the States. The Oregon and California educational measures are especially noteworthy. The former proposes to grant Oregon veterans, desirous of attending any public or accredited private school or college in the State, financial aid to the amount of \$75 the first month of school attendance; \$50 a month for eight months; and \$35 a month for nine months of each subsequent school or college year. This measure must be popularly ratified before it becomes effective. Under the California law, discharged service men from that State may receive funds for school fees and living expenses, up to \$40 a month for the latter alone. As much as \$1,000 may be expended on the account of any single veteran.

The need to develop plans and programs for postwar reconstruction and development led the legislatures to consider measures toward that end. Special State agencies to coordinate plans and activities of the State governments and to give assistance and guidance to private and local governmental planning efforts were created or authorized in at least half of the States in their 1942 and 1943 legislative sessions. In several States—including California, Georgia, and Indiana—the new agencies replace pre-existing planning boards. Many of the States have retained the old planning bodies as the coordinating agency for postwar plans and have invested them with new powers and additional funds. From the inclusion of representatives of labor, business, commerce, agriculture, local governments, and others on these boards, it would seem that the effort is being made to bring into focus the various

interests of the States.

Fiscal preparation for the postwar years, involving the creation of reserve funds from surpluses or bond issues, was considered by most of the legislatures in 1948. About 24 of them passed laws setting up such funds for public works, veterans' benefits, airport and highway expansion, capital improvements and long-term repairs, and similar purposes. Among the States setting up reserves from surplus funds were Illinois, Michigan, North Carolina, Arkansas, California, Maine, Maryland, Ohio, North Dakota, and Wisconsin. Unused highway appropriations and revenues were frozen for highway construction and related work after the war, while bond issues for postwar public works have been authorized by the legislatures in Delaware, Montana, New York, and North Carolina.

The need for development of postwar plans and measures on all levels of government has led to what might be called a trend toward investing local governments with greater autonomy over their financial destinies. This has been expressed by the passage of legislation granting local jurisdictions the power to build up cash reserves for capital improvements later on. By the close of 1942, nine States had passed enabling laws granting this power to their local governments. Ten more States-Arizona, Connecticut, Florida, Maine, Minnesota, New Hampshire, North Carolina, North Dakota, Penn-sylvania, and Rhode Island—took similar action in 1943. The passage of laws in a number of States including Indiana, Kansas, Minnesota, and New Jersey—giving local governments extensive authority to purchase land and make other arrangements for airports adds strength to this movement, as do the new planning and zoning and urban re-habilitation laws in others. The desire to stimulate the rehabilitation of cities through rebuilding rundown neighborhoods by private capital lay back of the Massachusetts law authorizing the investment of life insurance funds in low-rental housing, and of the extension for six more years by the New York legislature of previous authorization in that State. The California legislature adopted a law permitting cities to acquire property for urban redevelopment purposes and Indiana, Kansas, Maryland, Missouri, and Wisconsin have new laws on this subject.

Taxation and Finance. On the whole, the yield from sources of State revenue reached unprecedented heights following the nation's embroilment in the war. This increase in receipts was not evenly distributed among the various sources. While State personal and corporation income taxes were unusually productive, for example, license fees and excises on motor vehicles and motor vehicle fuels declined appreciably. Although some States, more dependent on the declining sources of income than were the other States, were forced to adopt new levies, many of the States were able to grant their citizens some tax relief although the twofold desire to improve their financial standing for postwar needs and their unwillingness to prejudice the success of national price and economic policies pre-

vented all but relatively minor tax reductions.

The major tax relief offered by 1948 legislatures related to income taxes. South Dakota and West Virginia abolished their income levies outright, while California, Iowa, Maryland, New York, North Dakota, Oklahoma, Oregon, and Wisconsin granted taxpayers substantial reductions. Most of them provided for deductions for medical care or for in-surance costs while Alabama, Colorado, Massachusetts, and North Carolina permit certain new deductions.

California, likewise, lowered rates on corporation income and on bank and corporation franchise taxes. West Virginia exempted from the two per cent consumers' sales tax all food purchased up to fifty cents, and Nevada reduced the tax rate on property valuation. Various types of tax relief were granted to dealers in merchandise frozen under wartime controls in Minnesota, New Hampshire,

and North Carolina, while motor-fuel tax exemptions were extended to airplane operators by laws of Arkansas, North Dakota, Oklahoma, and Washington; Texas reduced its motor-fuel tax rates on Diesel fuels; and Alabama, Florida, Georgia, Indiana, North Dakota, and Oklahoma exempted the Federal government from paying certain State motor-fuel taxes.

Among the 1943 increases or new taxes levied are a one per cent "pay-as-you-go" tax on gross income in Delaware to expire at the end of 1944, and a tax of one cent per ten cigarettes in the same State. Alabama, Florida, and New Mexico also levied new tobacco taxes. The Iowa income tax law was amended to apply to war workers temporarily in the State. Some 16 States imposed new or reenacted old motor fuel and gasoline taxes, while Alabama, Florida, Idaho, Utah, and Washington and a few other States assessed new or increased existing taxes on liquors. Few 1943 changes in severance tax laws assessed against extraction of natural resources took place, but a trend was noticeable toward expansion of special utility taxation to cover transportation and power services hitherto not subject to a special utility tax.

not subject to a special utility tax.

Taxes on "juke boxes" were imposed in Oklahoma and Oregon, the latter also levying a three per cent sales tax which must be popularly ratified. North Dakota reenacted a two per cent retail sales tax and Nebraska increased its head tax for public assistance from two to three dollars a year. Washington became the seventh State to levy a special excise tax on motor vehicles in lieu of general

property taxes.

Colorado became the second State—Mississippi is the other—to have a general statute providing for reimbursement for all out-of-State auditing. The Colorado law provides that the costs of audits must be paid by out-of-State taxpayers for any tax due the State. Also related to tax administration were the major integration of tax agencies in Illinois and North Carolina's adoption of the enabling act proposed by the Council of State Governments and giving the Commissioner of Revenue power to enter into agreements with the Federal government or with any State or political subdivision of a State for the purpose of coordinating the administration and collection of taxes. One of the most interesting measures affecting tax and fiscal matters is the New York measure authorizing the creation of "tax revenue stabilization reserves," the purpose of which is to permit the accumulation of unneeded funds in the "fat" years for expenditure during the "lean." This measure met with popular approval in the November, 1943, election.

Labor Legislation. A great volume of labor laws was considered by the legislatures in 1943, much of it following closely along lines which became evident in 1942. New notes were struck as the result first of growing manpower shortages as the nation's output reach unprecedented heights, and second of strikes and disputes in defense and war

industries.

During the 1942–43 biennium, 20 States made permanent changes in laws relating to hours, night work, day of rest, and meal periods, in order to increase the production of individual workers. In several States occupations previously covered were excluded from hours laws. In Vermont, for example, the nine-hour day, fifty-hour week for women was amended to allow a ten-hour day and sixty-hour weeks or a period not to exceed ten consecutive weeks. Meal periods were shortened in two States while in six States, laws were passed lowering ages at which minors may work at night, or

permitting minors to work at later hours than formerly. In other States, changes were made suspending statutes for the duration of the war only, or granting authority to the labor commissioner or governor to vary labor laws during the war period.

Three States—Maryland, Delaware, and South Carolina—adopted in 1943 stringent "work-orfight" measures providing penalties for unemployed males, not in school, who refuse to accept employment. More common have been laws adopted in over one quarter of the States altering statutory requirements to permit wider use of women workers. Some, including laws in Illinois and Washington, assure women of equal pay for equal work.

ton, assure women of equal pay for equal work. Employment of boys, previously restricted, has been made possible, especially in bowling alleys and in dairy and farm work, in many States. Still others have lowered the age limits to permit boys to obtain conditional chauffeur licenses and driving certificates. Authorization of shorter school terms or unusual recesses to release students for farm work has been made in North Carolina, California, and Utah, while New York continued previous authority to release pupils for planting and harvesting, and added authorization for student work in canneries. An interesting sign of the times as it relates to students and the manpower situation is a Nebraska law which permits junior colleges to suspend until 1947 without loss of status. In all, since Dec. 7, 1941, more than three fourths of the States considered alterations of their child labor laws; in 27 of the States, changes have actually been made or authority to modify laws has been granted.

Prisoners are made available for work in Maryland and North Carolina. Recipients of old-age assistance in California and Montana have been encouraged by law to leave assistance rolls to accept seasonal work. In this connection, several legislatures—including those of California, Colorado, Nevada, and Oklahoma—have memorialized Congress to amend Federal regulations to permit old-age assistance recipients to do odd jobs without forfeiting State aid. The adoption of so-called "secondinjury fund" laws in at least five States—Maine, Michigan, Oklahoma, Rhode Island, and Washington—in 1943, adding to the 14 which previously had laws on the subject, was designed to encourage employers to hire physically-handicapped workers. Under these laws, employers pay costs of second injuries, but if these injuries, combined with the original handicap, result in permanent disability, the additional cost is borne by the State "second-injury" fund.

Special measures were taken by 1943 legislatures to meet the shortage of professional workers when a score of States passed laws relating to teachers, doctors, dentists, and nurses. Indiana has prohibited the retirement of municipal police officers on pension for the duration. Maine has taken similar action regarding State police. Retired school teachers are encouraged to return to work by Arizona, Arkansas, California, Indiana, and North Carolina laws, while many States have lowered teaching requirements in order to issue emergency teachers' certificates. Laws easing the requirements for practice by physicians, surgeons, and dentists have passed in Delaware, Kansas, Maine, Nevada, New York, Pennsylvania, and Washington, while Kansas and Oklahoma will permit nurses from

other States to practice.

Measures requiring legal responsibility of labor unions and their representatives drew much attention in 1943 sessions. During the year, 11 States enacted restrictive industrial relations measures.

Alabama, Arkansas, Colorado, Florida, Kansas, Missouri, and Texas adopted laws tightening control over labor organizations and requiring their licensing and periodic filing of financial and membership reports. The intent of these bills, expressed in the Texas law, is to establish regulation of unions, their officers, organizers, and other representatives, as a public policy. Anti-violence bills were placed on the statute books of Arkansas and Michigan, the Arkansas act curbing picketing and other activities resembling closely the 1941 Texas law and the 1942 Mississippi law. Alabama's law, adopted in mid-1943, incorporates features of laws passed earlier in the other States. Identical laws requiring periodic statements and limiting certain union activities passed in Idaho and South Dakota, while Massachusetts banned the exaction of fees by labor unions for work permits. In addition to these laws, minor changes were made in existing industrial relations acts in Minnesota, Pennsylvania, and Wisconsin.

Over half of the 1943 sessions studied laws to increase workmen's compensation. Minnesota and Michigan broadened their statutes to provide general coverage of occupational diseases, while Arizona and Oregon passed occupational disease laws for the first time. Compensation for injuries has been liberalized in Indiana, Massachusetts, North Carolina, and several other States. A Rhode Island statute establishes a curative center for rehabili-

tating injured workmen.

Exclusive of changes effected for the benefit of service men, few changes were made in the benefit provisions of State unemployment compensation laws in comparison with 1941 sessions. Changes consisted for the most part of increases in the maximum duration of benefits or in minimum or maximum weekly benefit amounts. Such changes were made in laws adopted in 20 States. A number of States adopted technical amendments to further the program for payment of benefits by one State on behalf of another or for similar reciprocal arrangements with Canada in cases in which a worker has moved from one jurisdiction to another.

Two opposing trends with respect to taxation for unemployment compensation were noted. One group of laws—notably those in Idaho, Maine, Maryland, Pennsylvania, and Tennessee—adopted experience-rating systems which will, in effect, lower tax rates. In several others, penalty rates above 2.7 per cent were lowered or abolished. Another group of laws, in Alabama, Florida, Illinois, Iowa, Maryland, Minnesota, Missouri, Ohio, Oklahoma, and Wisconsin, assess larger "war risk" payments against employers whose payrolls have expanded greatly within the last two or three years. The purpose behind these is to build up reserves

social legislation. Child welfare, public health, public assistance, and related subjects have not been ignored by 1943 legislatures. As funds for the support of these services have mounted, or as the cost of living has gone up, the movement to increase assistance to the indigent and dependent

has gained strength.

Ceilings on old-age-assistance grants were raised by five States—California, Maine, Maryland, Minnesota, and Tennessee. Maximum limits were eliminated altogether by Iowa, Montana, and New Jersey, and Nevada raised its minimum from \$30 to \$40 a month. All of this action raised from 27 to 31 the number of States which have maximums of \$40 a month or more on old-age assistance grants or have no ceilings at all. Other States, including Michigan and Colorado, increased the amount of

property which recipients of assistance might have. The aid to dependent children program in Wisconsin was expanded. The program of aid to children between 16 and 18 years was extended to all of the counties in the State. Iowa adopted a new program which met with the approval of the Federal Social Security Board. The same body approved of the aid to the blind program adopted by the Illinois legislature. By the close of the 1943 legislative year, all States but Nevada had aid to dependent children programs approved by the board and all but Delaware, Missouri, Nevada, and Pennsylvania had board-approved aid to the blind programs. Approval by the board is a pre-requisite to appropriation of Federal funds to assist in carrying on such programs.

Steps have been taken by about two thirds of the States to set up wartime child-care programs. A score of these States this year enacted legislation authorizing public schools or other agencies to establish day care nursery schools or to undertake extended school services, with some of the States providing funds for operation of day care centers. New York, one of the first States to act, authorized a \$15,000,000 program and made an outright appropriation of \$2,500,000 for matching by the Fed-

eral government.

The desire to curb juvenile delinquency led to legislation setting up "liquor curfews." Florida, Texas, North Carolina, and Arkansas were among the States thus limiting the sale of liquor after certain hours, while Washington, Michigan, and Arkansas took steps to prohibit sale of alcoholic beverages to minors. Other bills of a like nature were passed in Idaho, Oklahoma, and Arizona, the law in Arizona calling for public school instruction on the nature and effects of alcohol, and the Oklahoma statute stipulating the nonsale of beer in

dancing places.

More than half of the legislatures considered laws affecting social hygiene. Seven of them—Arkansas, Florida, Georgia, Oklahoma, Tennessee, Texas, and West Virginia—adopted measures to combat prostitution, raising to 19 those with adequate control over most features of prostitution. The pre-marriage health examination laws adopted this year by Missouri, Nebraska, Idaho, and Wyoming raise to 30 the States having this provision. The same number of States provide for blood tests of expectant mothers, as a result of laws in Idaho, Georgia, Kansas, and Nebraska. An Alabama law of 1943 launched a venereal disease control program which has as its goal the eventual examination for syphilis of every person in the State between the ages of 14 and 50. The waiting periods between application for and receipt of licenses that were put on the statute books to prevent "gin mar-riages" and "child marriages" are losing popularity, however. Illinois abolished its waiting period two years ago, California this year; and Maryland has eliminated its requirement when persons in the armed forces are concerned.

The outstanding piece of prison reform legislation was passed by a special session of the Georgia General Assembly. The old State Board of Prisons was abolished and a State Department of Corrections substituted. At the same time, the Director of Corrections was specifically enjoined to eliminate "chain gang" conditions, prohibit whipping, abolish road camps, segregate the sexes, and the juvenile offenders from hardened immates, severely restrict the use of striped clothing on prisoners, institute programs for rehabilitation, provide educational and recreational activities, and formulate rules and regulations in a systematic manner for

the rewarding of exemplary prisoners. These measures supplement the constitutional amendment ratified by the people of Georgia in August which takes away from the governor the power of reprieve, pardon, or commutation of sentence except in case of death or treason sentences.

State Government and Employees. A number of administrative shifts and changes drew the attention of the legislatures in 1943. One of the most important of these was the creation in Michigan of a new Department of Business Administration to effect economies and to suggest means of consolidating functions and activities. Another was the creation in New York of a new department, the Department of Commerce, a measure which was subsequently ratified by the people in the November election. This is the first full-fledged State department created in New York in twenty years. Other developments include the tax administrative reorganization measures in Illinois and South Dasistand the abolition in Maine of the old age assistance commission and the transfer of its duties to the department of health and welfare.

Reapportionment, much overdue in many cases, was acted on in Pennsylvania and New York. In the latter, the 1943 action is the first since 1917. The legislature of the Empire State also changed the beginning of the fiscal year from July 1st (used by almost two thirds of the States) to April 1st (also used by Washington and Wyoming).

Measures to grant retirement plan benefits to

Measures to grant retirement plan benefits to State employees and to raise their salaries were considered by several legislatures. In part these were adopted to offset the effect of more lucrative Federal and industrial employment, to "stabilize State employment, reduce excessive personnel turnover, and offer suitable attraction to high-grade men and women to enter State service" as expressed in a Wisconsin statute, and to compensate for increased costs of living. With the adoption of retirement plans for State employees in Illinois, Michigan, and Wisconsin this year, about half of the States had taken such action. The Wisconsin proposal was vetoed by the governor but was repassed over his veto at his request. Supreme court and circuit court jurists in Oregon are affected by a retirement plan adopted for them, while teachers benefit from pension systems adopted in Arizona, Oklahoma, and Nevada. The people of Georgia in August ratified a constitutional amendment permitting the State government to set up a retirement system for teachers.

Some States permit employees of local governments to participate in their retirement systems. With the enactment of laws by Pennsylvania, Colorado, and Wisconsin this year, 11 States now provide for State-wide retirement plans for municipal and local government employees. A Connecticut law of this year established a separate system for

certain municipal servants.

A score of legislatures found it desirable to raise salary levels, at least ten States taking such action for their own employees. In North Dakota, the ceiling over State employees' salaries was removed and an increase of 25 per cent given; California continues previous wartime salary increases of \$25 and \$20 a month to employees whose pay is less and more, respectively, than \$300 a month. New Jersey, New York, and Wisconsin all gave their employees wartime cost-of-living bonuses on a percentage basis. In each case, the increase is not applicable over a certain set amount. School teachers also benefit from increases in about ten States. In this connection, Utah became the 25th State to pass a minimum salary law for teachers.

Among other measures affecting the framework and operation of government were laws in Idaho and Nebraska granting women the right to serve on juries. They, and Vermont which took similar action by popular ratification of a constitutional amendment in November, 1942, raise to 28 the States permitting women to serve in this capacity. Moves in the direction of constitutional revision were heralded in Georgia and New Jersey. In the former, a joint resolution called for the appointment of a constitutional revision commission; in the latter, the people of New Jersey ratified a measure authorizing the next legislature to adopt a revised constitution for the State.

Aviation, Highways, and Motor Vehicles. The postwar importance of aviation was recognized by several of the State legislatures. Many of them made their postwar planning agencies responsible for coordinating aeronautical development plans with their other business. This object apparently lay back of the Wisconsin action in abolishing its preexisting State aeronautics board and entrusting the stimulation of aviation to the State planning board. In Alabama, the 1943 legislature reorganized the aviation commission which is to foster aeronautics, while the Minnesota legislature adopted several outstanding measures. One of these created an independent department of aeronautics and gave it extensive powers; others laid the basis for a State system of municipal airports and created a commission to develop airports for Minneapolis and St. Paul.

The 1943 legislatures, especially those of the western States, have shown much interest in the construction of flight strips along highways. These laws, more or less uniform, authorize State highway departments to cooperate with the U.S. Public

Roads Administration.

The impact of war was reflected clearly in developments affecting highways and motor vehicles. Many legislatures authorized the adoption of new vehicle licenses because of essential metal shortages. The matter of highway speeds likewise drew attention. Many of the laws granting extraordinary powers to governors and highway departments empowered them to set limits as conditions require.

Several States—including Delaware, Minnesota, Missouri, Nebraska, New Hampshire, New Mexico, North Carolina, and Wisconsin—legislated to liberalize their regulations governing the maximum lengths, gross weights, gross load limits, and other aspects of trucks and trailer-combinations, with a view to adopting minimum approved standards. Efforts along this line in Illinois were not successful. Greater concern was not shown for this problem, however, because the States had agreed in 1942 to apply uniform motor vehicle regulations for the duration.

In the field of reciprocity laws, several agreements relating to trucks, commercial vehicles, and passenger automobiles were reached. In Florida, a State reciprocal trade commission was established to treat with similar commissions in neighboring States in the endeavor to wipe out gross inequities. In the Southwest, an administrative accord affects Oklahoma on the one hand, and Arkansas and Texas on the other. Legislative action led to the adoption of a reciprocal truck bill in New Hampshire and to the negotiation of a pact ending a trucking war between Wisconsin and Michigan. Reciprocity measures were adopted also in Minnesota, South Dakota, Tennessee, and Utah, and an Illinois legislative commission has been created to study the subject.

Indiana, Oregon, and Utah enacted new driver

responsibility laws requiring financial ability to pay for accidents. In the field of motor vehicle inspection, several States have been forced by loss of personnel and other reasons to make readjustments. Laws in Connecticut, Delaware, South Carolina, Vermont, and Washington are designed to abandon

or curtail the periodic inspections.

The trend toward banning the use of so-called "highway" funds—gasoline taxes, motor vehicle registration receipts, etc.—for nonhighway purposes continued in 1948. Constitutional amendments to invoke this ban were submitted to the voters by the legislatures of Maine and Washington, and similar amendments were initially approved in New York and Pennsylvania, but must be passed on again by the legislature before appearing on the ballot. Fourteen other States at the present time have these constitutional provisions. Interstate Legislation and Uniform Laws. Several ex-

Interstate Legislation and Uniform Laws. Several examples of interstate accord have been mentioned in other connections. Important developments in the field of river and marine agreements deserve special mention, however. The Arizona legislature provided for the consummation of a contract between that State and the Federal government, looking toward adherence to the Colorado River Compact. The other six States in the Colorado basin have signed the compact which was promulgated

in 1925.

The Republican River Compact, signed Dec. 31, 1942, came before the legislatures of Colorado, Kansas, and Nebraska for review; all three gave legislative approval. Georgia ratified the Atlantic States Marine Fisheries Compact and became a member of the compact commission, while South Dakota took legislative action in anticipation of the creation of an eight-State committee of Missouri River Valley States for development of that

region. Through legislative or executive action, the member-States of the interstate oil compact commission extended their membership for four more years. Connecticut became the 37th State to sign the interstate parole and probation compact and enabling legislation was passed by the New York legislature to permit the participation of that State.

Uniform laws were also considered in 1943. A total of more than 60 adoptions of the 65 recommended uniform laws brought to about 800 the uniform laws on the statute books of the States. South Dakota, for example, adopted seven uniform acts and North Dakota, eight. The Simultaneous Death Act, alone, was adopted by 13 legislatures in 1943.

conclusion. It is apparent that legislative leaders endeavored to streamline 1943 sessions by limiting their consideration largely to "emergency" laws dealing with war and postwar matters, and to necssary regular business. As a result, the sessions were—on the whole—shorter, and the number of bills considered was less, than in 1941 and 1939.

In recent "legislative" years—the odd-numbered years—the State law makers have considered about 60,000 bills and have enacted about 18,000 of them. In 1939, 59,500 bills were introduced and 17,958 enacted; in 1941, with three States not reporting, 58,579 were introduced and 18,124 passed. In 1943, introductions (with three States not reporting) totaled 42,400 and enactments numbered 15,867. Thus about 37.5 per cent were enacted this year in contrast to less than 31 per cent in 1941 and 30 per cent in 1989.

The desire to streamline sessions is seen in the number of calendar days taken up by the legislatures. For example, the session in Kansas was two weeks shorter than in 1941; Maine's was three weeks shorter; and Michigan's was twenty-four weeks shorter. More than 12 legislatures dispensed with their business in at least one calendar week less time than in 1941 while seven cut down their sessions a few days. Only three sessions besides Missourt's—which was the longest in the State's history—were longer than in 1941.

STRATEGIC AND CRITICAL MATERIALS. Strategic materials are defined as "those essential to national defense, for the supply of which in war dependence must be placed in whole, or in substantial part, on sources outside the continental limits of the United States, and for which strict conservation and distribution control measures will be nec-

essary."

The Conservation Division of the WPB issues quarterly revisions of some 500 materials grouped into three categories. Group I includes those materials whose supply is insufficient to satisfy war plus essential industrial demands. Those in Group II are currently sufficient to satisfy these same needs. Group III materials are in excess of current essential needs. The two factors determining the placement of the materials are supply—including domestic production, import, stockpiles, Government Planning, United Nations policy arrangements; and demand—including military, civilian, and export needs, stockpile reserves, Government regulations, substitution possibilities.

The Oct. 1, 1943, list of the Conservation Division revealed the easing of many nonferrous metals including aluminum and magnesium, into Group II, and the even more marked easing of ferroalloys indicated that these materials in unfabricated form are sufficient to supply essential war and industrial needs, although there was no indication of availability for general use. Certain synthetic rubbers were eased, while a few chemicals, including sulfuric acid, were more critical. New materials added to Group I were dichlorodifluoromethane (freon 12), lignumvitae, and penicillin.

The most significant change in the Jan. 15, 1944, list was the easing of copper and steel to Group II. However, in opposition to the general trend toward easement, most chemicals and plastics became slightly tighter. Also, in contrast to the general easing of nonferrous materials, tin continued as a critical supply. Another such exception was the advance of lead from Group III to Group II, due to a gradually declining supply.

In making a comparison of 1942 and 1943, the

most striking changes have occurred among metals: on Nov. 6, 1942, the three most critical materials were aluminum, copper, and magnesium, while a year later, Oct. 15, 1943, these same metals had become plentiful enough to be eased into Group II, with copper changing on Jan. 15, 1944. On the first date, the most critical of the ferroalloys was molybdenum, only to be eased into Group III on January 15. Cadmium, nickel, platinum, and malleable cast iron remained in Group I.

For governmental activities in conserving or procuring strategic and critical materials, see War Production Board under Balanced Production; also, Coordinator of Inter-American Affairs, Federal Bureau of Investigation, Mines, Bureau of, and National Housing Agency. See the separate articles on important materials, as Beryllum, Hides and Leather, Nickel, Platinum, Tin, etc. See also the articles on various branches of industry and those listed under Substitutes.

SUBSIDIES. Governmental subsidies were in effect with regard to certain commodities in the United States during 1943, with the object of holding down the cost of living and, in other instances, stimulating war production. The use of subsidies was advocated by the Administration and was the subject of extended Congressional debate, a ban having been voted and subsequently vetoed during the year. The highly controversial nature of the subject appears in the discussion of the subject from diverse angles in the following articles: Acriculture under Wartime Price Control; Business Review; Food Industry; Living Costs; United States under Inflation; War Food Administration. SUEZ CANAL. A sea-level canal across the Isthmus of Suez, connecting the Mediterranean and the Red Sea. Operated by the French-controlled Suez Canal Company, which holds a concession (expires Nov. 17, 1968) from the Egyptian Government, the canal is normally the main route between maritime Europe and the ports of the Indian and western Pacific oceans.

Cargo traffic on the canal declined from the peak of 36,129,101 net registered tons carried by 6,570 ships in the calendar year 1937 to 13,092,-615 tons carried by 2,459 ships in 1940. A total of 98,944 passengers (civil and military) traveled through the canal during 1940. During 1941 and 1942 Axis bombers repeatedly attacked Canal installations and were reported to have sunk several ships which blocked traffic temporarily. See Egypt under Transportation.

sugar. The sugar beet crop in the United States in 1943 was estimated by the U.S. Department of Agriculture at 6,516,000 tons of beets from 552,000 acres, expected to produce about 938,000 tons of sugar, compared with the 11,674,000 tons of beets, 954,000 acres and 1,613,000 tons of sugar in 1942, and a 1932–41 average of 9,834,000 tons of beets from 833,000 acres and 1,452,000 tons of sugar. The acre yield was 11.8 tons versus 12.2 tons in 1942 and 11.8, the 10-year average. The production figure represent approximately a 44 per cent reduction from the near-record crop produced in 1942 and the smallest tonnage produced since 1922. Contributing to the decrease this season were such factors as unfavorable weather at planting time, uncertainty as to the labor situation, discouragement brought about by the difficulties experienced in harvesting the previous crop, and hard competition from other crops demanding less hand labor. Beet sugar production in leading States was estimated for Colorado 244,000 short tons, California 168,000, Montana 102,000, Idaho 78,000, Nebraska 76,000, and Utah 64,000.

Production of sugarcane for sugar in 1943 was marked by a favorable season in both Louisiana and Florida. The 1943 sugarcane crop of the two States, including cane for seed, was grown on 289,000 and 33,000 acres, respectively, and was estimated as 5,914,000 and 990,000 tons. Molasses as a sugarcane by-product totaled 42,423,000 gal. The sugarcane sirup produced in eight Southern States totaled 19,240,000 gal. and sorgo sirup made in 18 States amounted to 11,760,000 gal.

Maple products report by 10 States included 2,555,000 gal. of sirup and 578,000 lb. of maple sugar. These figures compared with 2,915,000 gal. of sirup and 654,000 lb. of sugar in 1942 and the average of 2,534,000 gal. of sirup and 800,000 lb. of sugar for the 10-year period.

The average prices received by growers during the 1942 marketing season and the value of production, according to preliminary estimates, were respectively for sugar beets \$7.19 per ton, \$46,853,000; sugar cane for sugar and seed \$4.41 per ton, \$30,428,000; sugar cane sirup \$1.018 per gal., \$19,492,000; maple sugar 45.3 per lb., \$262,000; maple sirup \$2.85 per gal., \$7,274,000; and sorgo sirup \$1.247 per gal., \$14,668,000. Beginning in May, 1942, sugar was rationed and the consumption limited to ½ lb. per person per week but to conserve the nation's fruit crop an additional allowance of one pound for every four quarts of canned fruit

and of one lb. per family member for packing preserves, jams, jellies, and fruit butters was made. See CHEMISTRY; CUBA under History.

SURINAM (Netherlands Guiana). A colony on the northern coast of South America, belonging to the Netherlands. Area, 54,291 square miles. Population (Jan. 1, 1942), 183,780, including the Negroes and Indians living in the forests. Chief towns: Paramaribo (capital), 56,223 inhabitants, Nieuw Nickerie, 5,000, Albina, Coronie, and Moengo. Vital statistics (1941): 5,140 births, 1,928 deaths, and 451 marriages. Education (1941): 120 schools and 22,664 students.

Production and Trade. The principal agricultural products are sugar, rice, maize, coffee, cacao, balata, bananas, oranges, molasses, rum, and timber. Mineral output (1941) included bauxite (1,093,-764 metric tons), gold, and salt. Livestock (1941): 21,396 cattle, 5,727 goats, and 7,161 pigs. Trade (1941): imports 9,429,922 guilders; exports 11,398,377 guilders. Shipping (1941): 548 vessels of 2,167,008 register tons cleared 2,197,098 register tons cleared.

Communications. The rivers provide the principal means of communication to the interior. Railways: 244 miles. Air services (1943): Paramaribo and Miami, Florida, operated by Pan American Airways; Paramaribo and Trinidad, Curaçao, and other West Indian points, operated by Royal Dutch Air Lines.

Government. Budget estimates (1943): revenue 8,765,000 guilders, expenditure 8,769,000 guilders. The executive authority and administration are under a governor, assisted by an advisory council. There is a representative body called the States of Surinam consisting of 15 members (5 appointed by the Governor and 10 elected by the voters). Governor, Dr. J. C. Kielstra (app. Aug. 16, 1933).

History. The threat to Surinam's wartime prosperity and military security that arose as a result of Axis espionage, sabotage, and submarine war-fare during 1940–42 was largely banished in 1943. After more than 10 years in office, Governor Kielstra resigned early in December and was appointed Netherlands Minister to Mexico, effective Jan. 3, 1944. J. C. Brons, vice chairman of the Surinam Council and former president of the Paramaribo Court of Justice, became acting Covernor.

When Professor Kielstra took office in 1933, Surinam's revenues averaged 4,000,000 guilders (\$2,160,000) annually and a subsidy of nearly 3,000,000 guilders from the Netherlands Government was required to balance the budget. When he left, the budget had increased to 13,500,000

guilders (\$7,390,000) and was balanced without the aid of the mother country

Crown Princess Juliana made an official visit to Surinam, arriving at Paramaribo from the United States by air on November 2 and making a tour of the principal towns and mining centers. She was enthusiastically greeted by the polyglot population. All classes participated in a great demonstration in Paramaribo in honor of the royal family. The Netherlands Covernment in London arranged late in the year to purchase all first-quality coffee produced in the colony at fixed prices to bolster the coffee industry. See NETHERLANDS under History.

SURVIVAL RATES, Pupil. See Schools. SURVIVORS INSURANCE. See SOCIAL SECURITY BOARD.

SVALBARD. An arctic archipelago (10° to 35° E. and 74° to 81° N.) owned by Norway. The principal islands are West Spitsbergen (or Mainland), pan Islands are North East Land, Prince Charles Foreland, Edge Island Barents Land, King Karl's Land, Hope Island, Barents Land, King Karl's Land, Hope Island, and Bear Island (69 sq. mi.). Total area, 24,294 square miles. Population on Jan. 1, 1940, about 1,000. Green Harbor (capital), New Aalesund, Coles Bay, Longyearbyen, and Braganza Bay were the main settlements, all on the western coast of West Spitsbergen. Coal was the chief product (627,000 metric tons in 1938 and 400,000 in 1940). Iron, asbestos, and gypsum exist. Most of the inhabitants were evacuated during September, 1941. The archipelago commands the route over which Allied war supplies were being sent to the Russian port of Murmansk. On Sept. 8, 1943, heavy units of the German fleet made a hit-andrun raid on West Spitsbergen, guarded by 100 Norwegian soldiers. The Germans claimed to have wrecked harbor installations and the weather station at Barentsburg. Five British destroyers were reported to have reached Barentsburg on Sept. 13, 1943, and landed additional forces.

SWAZILAND. A British protectorate in South Africa. Area, 6,705 square miles. Estimated population, Jan. 1, 1940, 160,000. At the 1936 census there were 153,270 native Bantus, 2,740 whites, and 705 of mixed race. Capital, Mbabane. The chief occupations are stock raising and agriculture (mainly corn, tobacco, groundnuts, cotton, and millet). Some tin and gold are mined. Revenue in 1939-40, £109,756; expenditure, £159,812; public debt, £99,195. The government is in the hands of a resident commissioner representing the British High Commissioner for Basutoland, Bechuanaland Protectorate, and Swaziland.

SWEDEN. A constitutional monarchy of Scandinavia.

Capital, Stockholm. Sovereign, Gustaf V, who succeeded to the throne Dec. 8, 1907.

Area and Population. Area, 173,398 square miles; population, estimated at 6,406,474 on Jan. 1, 1942 (6,250,506 at 1935 census). Of the 1941 population, 3,990,000 lived in rural and 2,381,000 in urban districts. Births in 1941 numbered 99,386 (15.6 per 1,000); deaths, 71,774 (11.2 per 1,000); marriages, 56,954 (8.9 per 1,000). The number of Norwegian refugees in Sweden in 1943 was estimated at 19,000. Estimated populations of the chief cities on Jan. 1, 1942, were: Stockholm, 599,962; Göteborg, 283,183; Malmö, 157,462; 599,962; Göteborg, 283,183; Malmö, Norrköping, 71,150; Hälsingborg, 62,553.

Education and Religion. Schooling is compulsory and there is practically no illiteracy. The elemen-

tary schools had 557,667 pupils in 1939. In 1941 there were 52,939 pupils in 189 public secondary schools; 6,046 in 58 people's high schools; 4,144 in 2 high and 9 elementary technical schools. The state universities at Uppsala and Lund and the medical faculty in Stockholm had a total of 5,878 students in 1941, the private universities at Stockholm and Göteborg, 2,531 students. According to the 1930 census, there were 6,653 Jews, 4,763 Roman Catholics, 3,981 Methodists, 805 Baptists, and 1,499 members of other minority creeds. The rest of the inhabitants adhered to the state-recognized Lutheran Protestant Church.

Production. The 1940 census showed 35.7 per cent of the total population dependent upon industry (32.8 per cent in 1930), as against 31.9 per cent dependent upon agriculture (36.7 per cent in 1930). The bread grain crop of 1942 (wheat and rye) increased to 896,200 metric tons from 610,300 metric tons in 1941. Feed-grain crops (barley and oats) totaled 1,690,924 metric tons in 1942 (1,354,396 in 1941). Beet sugar production from the 1942 crop was about 276,000 short tons. Yields of other crops in 1941 were (metric tons): Potatoes, 2,069,693; peas, 31,520; beans, 1,489; vetches, 11,123; feed roots, 2,403,018; hay, 2,394,449. The livestock census of June 1, 1942, showed 2,531,412 cattle (2,759,394 on Jan. 3, 1941); horses, 586,295 (613,423); sheep, 445,729 (410,923); goats, 26,809 (25,490); swine, 836,311 (997,025); poultry, 7,046,514 (10,850,792). Exports of sawn and planed lumber were 355,000 in 1941).

Exports of iron ore were 13,650,000 tons in 1939, 10,137,000 in 1940, 9,539,000 in 1941, and 8,633,000 in 1942. Of the total iron-ore shipments, Germany took 11,292,000 tons in 1939, 9,285,000 in 1940, 9,477,000 in 1941, and 8,200,000 in 1942. Estimated mineral and metallurgical production in 1940 was (in metric tons): Coal, 450,000; iron ore, 14,000,000; pig iron, 745,127; ferro-alloys, 42,084; steel ingots, 1,145,064; manganese ore, 6,000; tungsten, 200; copper, 10,000; zinc, 32,000; aluminum, 1,400. Peat output was 400,000 tons in 1941. Shale oil production was about 37,000 tons in 1943; an expansion program adopted in 1943 called for facilities to produce 81,000 tons annually. Merchant ships delivered in 1941 totaled 161,

000 gross registered tons.

Foreign Trade. Merchandise imports in 1942 totaled 1,770,000,000 Swedish crowns (1,671,600,000 in 1941); exports, 1,312,800,000 crowns (1,351,200,000 in 1941). Nearly three-fourths of Sweden's trade was with Germany. German-Swedish trade totaled about 1,750,000,000 crowns in 1942 and 1,912,000,000 crowns in 1941. During 1942 Swedish ships made 61 trips between Göteborg and North and South America, carrying 528,000 gross tons of cargo. The value of goods imported from overseas was 550,000,000 crowns; of goods exported, 60,000,000 crowns. Grain, fodder, mineral oils, etc., were the chief imports from

goods exported, 60,000,000 crowns. Grain, fodder, mineral oils, etc., were the chief imports from overseas. Germany in 1942 supplied about 3,800,000 metric tons of coal and coke, 280,000 tons of iron and steel, 72,000 tons of pig iron, about 110,000,000 crowns worth textile raw materials, and 100,000,000 crowns worth of machinery.

Finance. Sweden balanced its budget annually until the outbreak of World War II, and thereafter faced growing deficits due to extraordinary defense expenditures. For the fiscal year ended June 30, 1942, actual receipts were 2,267,633,000 crowns and expenditures 3,603,823,000 crowns. Estimates for 1942–43 placed current receipts at

2,362,550,000 and expenditures at 2,360,980,000 crowns (including ordinary defense appropriations of 762,000,000 crowns). Estimates for the capital budget balanced at 364,500,000 crowns. The public debt rose from 2,634,000,000 crowns on June 30, 1939, to 8,732,000,000 on July 1, 1943. Average dollar exchange rate of the Swedish crown (krona): \$0,2383 in 1941 and 1942.

(krona): \$0.2383 in 1941 and 1942.

Transportation. Sweden in 1942 had about 10,381 miles of railways, 55,000 miles of highways, and air lines connecting Stockholm with Helsinki, London (irregularly), and the chief cities of Germandominated Europe. Under legislation passed in 1939, all private railway lines were amalgamated with the state-owned lines by 1943. Over 90 per cent of the railway traffic is electrified. Swedish air lines in 1941 carried 20,987 passengers and 552,290 lb. of freight. Incoming shipping traffic from foreign countries totaled 11,592,000 tons in 1941; outgoing traffic, 12,079,000 tons. The total 1941 foreign traffic was 52.6 per cent that of 1939. The Swedish merchant marine on Dec. 31, 1941, consisted of 2,123 ships of 1,464,398 gross tons. Gross earnings in 1941 were 595,110,000 crowns. From September, 1939, to Apr. 1, 1943, Sweden lost 179 ships of 483,196 gross tons and 1,183 seamen as a result of attacks by belligerent powers. Of 600,000 tons of deadweight Swedish shipping chartered to Britain in 1940, more than two-thirds was lost in the service of the United Nations.

lost in the service of the United Nations.

Government. The Constitution of 1809, as subsequently amended, vested executive power in a hereditary King, acting under the advice of a Council of State (Cabinet), which is responsible to the Diet or Riksdag. The Upper Chamber of the Riksdag has 150 members, one-eighth of whom are elected annually by provincial and city councils; the Lower Chamber, 230 members, elected by direct male and female suffrage for four years. The composition of the Lower Chamber elected Sept. 15, 1940, was: Social Democrats, 134; Conservatives, 42; Agrarians, 28; People's party, 23; Communists, 3. A coalition Government including representatives of the Social Democratic, Agrarian, Conservative, and People's parties was appointed Dec. 13, 1939, with Per Albin Hansson (Social Democrat) as Premier. For developments in 1943, see below.

# HISTORY

Neutrality Maintained. Opening the 1943 session of the Riksdag on January 12, King Gustaf, then in his 85th year, again emphasized the primary aim of Swedish policy—to stay out of the war at all costs. To maintain her neutrality, Sweden was prepared to fight to the bitter end against invasion from any source. Premier Hansson told the Riksdag on January 18 that the commander in chief of Swedish armed forces had sent out a special order to all local military and civilian authorities to prepare to fight to the last on their own resources if communications between the central and local authorities were disrupted.

To present an effective defense against any attack, Sweden continued to strengthen, equip, and train the formidable military force that had been in process of expansion since before the outbreak of war. The budget for 1943–44 allocated 1,260,000,000 Swedish crowns for defense. Additional contingents of troops were called up for training in January and in June partial mobilization for a 30-day period was ordered by radio. Two milion copies of a booklet instructing the public what to do in case of war were distributed by the Ministry of Information in July. In mid-September

the Swedish general staff announced that the emergency mobilization of the armed forces would be maintained because of the imminent possibility of new extensions of the war in northern Europe.

Pressure from Allies. The policy of military preparedness was spurred by repeated protests from both Berlin and Allied capitals against alleged vio-lations of Swedish neutrality favorable to the opposing side, and by a series of armed attacks upon

Swedish ships, planes, and towns.
On the night of April 28-29 bombs bearing Russian markings were dropped on Verkoe Island, near the Swedish naval base of Karlskrona. In reply to a Swedish protest, Moscow replied that no Russian planes had been over Sweden that night. On June 5 the Soviet publication War and the Working Class published an article by Prof. Sergei Kryloff charging the Swedish Government with seven specific violations of neutrality in favor of the Axis (see *New York Times*, June 6, 1943, for the detailed charges). On June 9 a Swedish Foreign Office spokesman denied most of the Russian charges, but admitted several instances in which the Germans had been aided. Sweden, he said, had permitted the passage of one armed German division from Norway to Finland in 1941. He also admitted that after Soviet submarines had sunk Swedish vessels engaged in German trade in the Baltic, Swedish warships had escorted convoys containing some German ships through Swedish territorial waters

Stockholm authorities on March 10 rejected a protest from Britain against the building in Sweden of fishing boats for German order, which the British said were to be used as minesweepers. The British Ministry of Economic Warfare on April 20 announced that Sweden was exporting to Germany, in addition to iron ore and other raw materials, certain classes of goods outside the strict category of war materials that "may be used either for civil or military purposes." Sweden declined to answer the Anglo-American—Soviet notes of early August warning neutral nations against granting asylum to "Axis war criminals." After bombs of British origin were dropped on Lund during the night of November 18, the British Government admitted that one of the planes that did not re-turn from a raid on Germany that night might have been responsible. It agreed to make full com-

pensation.

There were other infringements of Swedish neutrality for which responsibility was not fixed. A Government communiqué of June 12 blamed sabo-tage by unidentified persons for the sinking of three Swedish destroyers at Haarsfjaerden, near Stockholm, on Sept. 17, 1941. On September 2 it was announced that a "violent explosion" in the Karlshamn oil factories had killed one worker, injured 20, and caused fire and damage estimated at a million crowns. In December the Swedish police arrested 14 Swedish seamen and one Norwegian for espionage on behalf of one unnamed foreign power against another—the latter was believed to be either Germany or Finland.

Friction with Germany. Swedish relations with Germany, however, constituted the major focus of the controversy over neutrality and the principal danger of Sweden's involvement in the war. steady stiffening of the Government's attitude toward Berlin was explained indirectly by Foreign Minister Christian E. Guenther on May 7, when he said that Sweden had acted in accordance with the dictates of the moment in interpreting her neutrality obligations so as to keep out of war. He

implied that during the first years of the war, when Sweden's defenses were weak and the danger of a German attack was great, the Government had slipped somewhat from the path of strict neutrality in order to avert an open clash with Hitler. By the beginning of 1943, however, German military difficulties had greatly reduced the likelihood of an invasion of Sweden and Stockholm felt free to take a stronger line toward Berlin, despite German threats.

This firmer attitude was reflected in Sweden's refusal to grant Germany a \$25,000,000 credit in connection with the renewal of the Swedish-German trade agreement early in 1943. The Germans responded by suspending in January the safe-conduct agreement under which a limited number of Swedish ships had been permitted to pass through the German and Allied blockades. They asserted that the Swedes had permitted Norwegian ships in Allied service to load at Göteborg goods needed for the Allied war effort. It was late in May before Berlin agreed to permit the resumption of this

vital overseas traffic.

Meanwhile a new source of controversy had developed. The Swedish submarine *Draken*, while maneuvering in Swedish territorial waters off Göteborg on April 16, was fired on by a German ship engaged in laying mines in Swedish waters. At the same time another Swedish submarine, the Ulven, which was on maneuvers with the Draken, disappeared in circumstances indicating that it might have been sunk by German gunfire. Two vigorous Swedish protests were rejected by Berlin, but on May 3 the German naval attaché in Stockholm offered an expression of regret from the German navy at the loss of the Ulven.

The anger aroused in Sweden by these events was deepened by successive flights of German warplanes over Swedish territory, and by the growing German brutalities toward Norwegian and Danish patriots. It found expression in strong criticism of the Swedish Government's foreign policy, particularly the continuance of the transit agree-ment of 1940 under which unarmed German troops and supplies were moved by rail across Sweden to and from Norway. This had eased the German burden of occupying Norway, facilitated the con-struction and manning of new German defenses in Norway, and lessened the strain on German ship-ping. The deep irritation of the Swedes was vented against the Swedish Nazi minority when two local groups attempted to hold rallies late in April. Both

under pressure from within as well as from Britain and Russia, the Swedish Government on August 5 announced that the transit of war material to Norway and Finland would cease on August 15 and the traffic of German soldiers "on furlough" between Norway and Germany would be halted August 20. On August 15 the transit ban was extended to include German courier planes. On October 1 the Swedes also banned all rail shipments of oil through Sweden destined to other countries, thus ending German shipments of oil and gasoline to the Norwegian port of Narvik.

The Germans accepted these restrictions in poor grace. The Nazi press opened another campaign of recrimination against the Swedes and there were further German infringements of Swedish neutrality, mainly in the form of attacks on shipping. On August 25 German naval forces sank two Swedish fishing boats in the North Sea, causing the death of 12 sailors. The German Foreign Office rejected a strong Swedish protest, declaring that the fishing boats were operating in prohibited waters. The Berlin radio denounced Swedish fishermen as spies for the Allies and criticized the "arrogant and provocative" attitude of the Swedish press.

On October 22 a German fighter shot down a Swedish passenger plane en route from England to Stockholm, killing 13 of the occupants including one American clergyman, the Rev. Dr. T. C. Hume, who was going to Sweden on a mission for the World Council of Churches. In reply to Swedish protests, the Germans announced that they would renew the safe-conduct agreement for Swedish commercial planes only if the Swedes agreed to submit cargo and passenger lists for German approval.

The Swedes meanwhile had aroused further ire in Germany by offering asylum to some 7,000 Jews arrested by the Gestapo in Denmark on September 30; approving a million-crown loan for the post-war rehabilitation of Denmark, Norway, and Finland; and offering a welcome to Norwegians and Danes escaping to Sweden. The Swedish Government revealed in December that it had begun training some 15,000 Norwegian refugees of military age in "police duties" including rifle practice. It was learned that the Norwegian Governmentin-Exile was financing the program and that it was under the direct supervision of Andreas Aulir, head of the Norwegian State Police, whose headquar-

ters were in London.

The arrest by German occupationary authorities in Norway late in November of 1,200 Oslo University students and professors for deportation to the Reich caused a new wave of anti-German feeling in Sweden. The Swedish Government on December 1 appealed to Berlin to halt the deportations and release the imprisoned students "in the interests of future Swedish-German relations.' This appeal was angrily rejected by the German Foreign Minister, who bluntly told the Swedes to "mind their own business." In reply the Swedish Government on December 18 warned that a "further deterioration" of German-Swedish relations ther deterioration" of German-Swedish relations was in prospect unless the Germans ended their repression of "neighboring peoples."

Economic Conditions. Despite a short grain crop in 1943, food rations remained fairly liberal. The continued trade with Germany and with overseas countries enabled the Swedes to obtain the most essential imports and the country entered 1944 in relatively good shape. The expected unemployment crisis failed to develop. Military mobilization, expansion of arms industries, and increased domestic production of substitutes for normal imports absorbed all of the kingdom's able-bodied

See CHEMISTRY under Foreign; DENMARK, FIN-LAND and Norway under History; LABOR CONDI-TIONS under Collective Bargaining; MUSIC; NAVAL PROGRESS; REFUGEES; SOCIALISM.

SWIMMING. A year without a new crop of swimming records would be almost unbelievable and the past campaign proved no exception for no fewer than six world's records for men were broken. Alan Ford, Yale freshman, turned in the most noteworthy performance when he reduced the great Johnny Weissmuller's 0:51 for 100 yards free style to 0:50.6. Ford had tied the old mark (set in 1927) during the 1942 season. The young Eli also helped Yale's Richard Baribault, Brewster McFadden, and Richard Lyon lower the 400-

yard free-style relay record to 3:26.2. Harry Holiday, University of Michigan ace, knocked down two back-stroke standards, swimming 100 yards in 0:57 and 200 meters in 2:22.9.

Emmett Cashin of Stanford cut the breast-stroke marks for 200 yards to 2:19 and 200 meters to 2:33.7. However, both of Cashin's records are awaiting official recognition. Michigan's trio of Holiday, Hayes, and Patten cut the American short-course time for the 300-yard medley relay to 2:50.8, fastest time ever achieved in any country though the International Federation lists no record for this event. Henry Kozlowski of North-western was clocked in 0:22.1 for 50 yards free style, a new national standard.

Ohio State dominated the indoor season, capturing the National Collegiate A.A. crown and the National A.A.U. title. However, before the sum-mer rolled around the Buckeyes had lost most of their stars to Uncle Sam and could offer no real threat in the National A.A.U. outdoor meet, Yale easily taking the team crown in that competition. Yale again won the Eastern Intercollegiate League title, Ohio State led the Western Conference, and Rutgers paced the Eastern Collegiate Association.

With many of our leading girl swimmers joining the services (and the Waves seem to be their favorite branch) the mermaids who usually steal the sports space from the less photogenic men stayed more or less in the background. However, enough comely and talented young stars were unveiled to raise high hopes for close and colorful competition among the lassies during 1944. The girls accounted for two American records. Miss Ann Curtis, 17-year-old San Francisco high school naiad, lowered the short-course time for 500 meters free style to 7:01.8 and Miss Jane Dillard of Fort Worth, Texas, the long-course standard for 100 meters breast stroke to 1:24.3.

Miss Curtis and Miss Florence Schmitt, 12-yearold New York Women's Swimming Association member, were the brightest stars among the mermaids. Miss Curtis, in her first start in national competition, won both the 400 and 800 meter free-style titles and Miss Schmitt captured the 1,500 meter and long-distance championships. The Multnomah A.C. girls of Portland, Ore., won A.A.U. team honors indoors and the Riviera Club of Indianapolis triumphed outdoors.

Among the divers, Frank Dempsey of Ohio State and Miss Ann Ross of Brooklyn's St. George Dragon Club were best off the springboard and Miller Anderson of the Army Air Force and Miss Jeanne Kessler of Chicago took platform diving laurels.

THOMAS V. HANEY.

SWITZERLAND. A federated republic of central Europe. Capital, Bern (Berne).

Area and Population. Area, 15,944 square miles; population at the census of Dec. 1, 1941, 4,265,703, against 4,066,400 at the 1980 census. Of the 1941 population, 1,396,747 resided in cities of more than 10,000 inhabitants. The 1941 census populations of the chief cities were: Zurich, 336,-395; Basel, 162,105; Berne, 130,331; Geneva, 124,-431; Lausanne, 92,541; St. Gallen, 62,530; Winterthur, 58,883; Lucerne, 54,716. The live birth rate per 1,000 inhabitants was 18.5 in 1942 (16.9 in 1941); death rate, 11.0 (11.1). In 1941 there were 2,194,085 Swiss and 126,621 foreign visitors to holiday resorts (1,922,825 Swiss and 1,007,865 foreigners in 1939). The 1930 census showed 2,924,-313 German-speaking Swiss; 831,097 French-speaking; 242,034 Italian-speaking; and 44,158 Romansch-speaking.

Defense. All males from 18 to 60 years of age serve in the compulsory national militia. Some 650,000 men were mobilized following the outbreak of war in Europe in 1939. After the collapse

of France, which lessened danger of invasion, betrance, which lessened danger of invasion, between 200,000 and 250,000 men were kept under arms. The army is well-equipped with modern arms, for which 1.5 billion Swiss francs were appropriated during 1933—43. Strong fortifications were constructed along the frontiers. Defense expenditures in 1942 were 1,253,377,000 francs.

Education and Religion. Literacy is virtually universal under a system of public education which varies by cantons. Statistics for 1940–41 showed 452,506 pupils in primary schools, 73,634 pupils in secondary and lower middle schools, and 10,121 students in the seven universities (in 1941-42). According to the census of 1930, there were 2,230,303 Protestants, 1,666,350 Roman Catholics,

and 17,973 Jews.

Production. In 1939 about 1,285,419 workers were employed in industrial establishments and 887,511 were engaged in agricultural pursuits. As a result of the war, the area under cultivation was expanded by 65 per cent, increasing home production of cereals to 32 per cent, potatoes to 46 per cent, and vegetables to 70 per cent of normal needs. The 1942 potato crop was about 1,250,000 metric tons (1,080,000 in 1941); vegetables, over 500,000 metric tons or more than double the 1941 yield. Milk production declined from 28.4 million quintals in 1939 to 26.2 millions in 1941. Fruit production was 7,512,000 quintals in 1941; wine, 18,180,000 gal. The 1942 livestock census showed 195,549 sheep, 144,375 horses, 3,644 mules and donkeys, 207,359 goats, 1,492,862 cattle, and 670,-115 swine. Estimated mineral production in 1940 (metric tons): Aluminum, 28,000; magnesium, 700; iron ore, 180,000; coal, 3,000. The chief manufactures are watches and clocks, machinery, textiles, electric equipment, chemicals, shoes, cheese, condensed milk, etc.

Foreign Trade. Including bullion except "gold bullion for banking transactions," the value of merchandise imports in 1942 was 2,049,600,000 Swiss francs (2,024,400,000 in 1941); exports, 1,572,-000,000 francs (1,462,800,000 in 1941). This increase was due mainly to higher prices, as the volume of imports was only three-fifths that of 1938. After the fall of France, Swiss foreign trade

1938. After the fall of France, Swiss foreign trade was carried on principally with Germany and German-controlled areas of Europe.

Finance. Estimates for 1943 (ordinary budget) were: Receipts, 384,700,000 Swiss francs (371,000,000 in 1942); expenditures, 481,200,000 francs (479,000,000 in 1942). The total of estimated ordinary and extraordinary budget expenditures in 1942 was 1,819,000,000 francs, of which defense appropriations were 1,310,000,000 francs. The total estimated tax receipts were 703,000,000, leaving 1,116,000,000 francs to be raised by loans. From Sept. 1, 1939, to Dec. 31, 1942, the cost of From Sept. 1, 1939, to Dec. 31, 1942, the cost of national defense totaled 4.6 billion francs, of which 3.4 billions were met by loans. Exclusive of the railway debt, the public debt of the Confederation on Jan. 1, 1942, was 4,285,761,752 francs. Including the railway debt and the debts of the cantons and municipalities, the total internal debt on Jan. 1, 1943, was nearly 10 billion francs, or more than 2,000 francs per capita. The average exchange rate of the Swiss franc was \$0.2268 in 1940, \$0.2320 in 1941, about \$0.2340 in October, 1942, and about \$0.2335 in October, 1943.

Transportation. The railways, mostly state owned, have 3,218 miles of line. In 1942 the Federal Railways carried 158,600,000 passengers (an alltime record) and 22,300,000 metric tons of freight. Highway mileage in 1940, 10,291. Swiss and foreign airlines operating within the country in 1941

carried 4,668 passengers (62,239 in 1939); flights covered 242,266 kilometers (2,580,600 in 1939). A merchant marine of 10 or more vessels was acquired in 1942 in an effort to continue Swiss overseas trade.

Government. The Constitution of 1874 provides a republican confederation of 22 cantons or States. The Federal Assembly consists of two chambers: one, the Council of States, is composed of 44 members—two from each canton; the other chamber, the National Council, has 187 members, all elected quadrennially by the obligatory vote of males and females who have attained 20 years of age. The Federal Council consists of seven members, all elected quadrennially by vote of the united chambers of the Federal Assembly; by similar vote, but annually, are chosen, from among the seven, a President of the Confederation and a Vice-President of the Federal Council. Each of the Federal Council's seven members is assigned to the direction of one of the seven Federal administrative departments. President in 1943, Enrico Celio. For developments in 1943, see below.

#### HISTORY

In the parliamentary elections of October 31 the Social Democratic party gained 11 seats and emerged as the strongest faction in the Federal Assembly, with 56 of the 187 mandates. The Social Democrats then demanded representation in the Federal Council, long dominated by the Radical Liberals and Conservative parties, and a proportionate share of the positions in the Federal Ministries, departments, and civil service. In an electoral session of the Federal Assembly on December 15 one Social Democrat, Ernest Nobs, was named head of the Department of Finance and Custom. The Radical Democratic, Catholic Conservative, and Farmers parties pooled their votes to reelect Marcel Pilet-Golaz for another four-year term as Federal Councilor (Foreign Minister). The Social Democrats had fought the parliamentary election on a platform calling for increased social legislation and a more liberal expression of foreign policy. On November 4 they demanded Swiss recognition of Soviet Russia and the resumption of diplomatic relations with Moscow, suspended for many years.

Throughout the year the Swiss continued the

policy of armed neutrality, which kept the country at peace during four and one-half years of Europe's greatest war. On frequent occasions the Swiss Government and the military command called the attention of the population to the continued danger of invasion and likewise reminded the warring powers that Switzerland was ready to fight. A series of preparedness demonstrations took place in the spring. Late in May Gen. Henri Guisan, Swiss commander in chief, warned the world in a radio broadcast to "keep hands off our passes." This warning was taken to reflect Swiss fears of a German-Italian move to seize the St. Gotthard and Simplon Passes through the Alps in order to facilitate the movement of troops and supplies between the two Axis countries.

The Swiss Foreign Office made repeated protests at the violation of the republic's airspace by R.A.F. and U.S. warplanes attacking German and Italian cities. On August 6 it politely rejected the Anglo-American-Soviet note warning neutral countries not to grant asylum to "Axis war criminals." The capitulation of the Badoglio Government to the Allies early in September brought a new flood of refugees from Italy and southeastern France. During September 17-27 alone, a total of 21,860

Italian refugees and 960 escaped Allied war prisoners crossed into Switzerland. Some German and Italian troops likewise entered the republic seek-

ing internment.

The Federal Supreme Court at Lausanne on February 1 imposed light prison terms on five persons charged with publishing communistic propaganda in violation of the emergency decree of Aug. 6, 1940 (see 1941 Year Book). On January 26 the Federal Council banned one volume of the latest edition of Meyer's Konversations Lexikon, printed in Germany, which described Switzerland as "peopled by a medley of criminals, particularly Jews." Two Swiss Nazi political parties were banned by the Federal Council and their newspapers suppressed on July 7 for deliberately pursuing policies violating Swiss neutrality legislation. A military tribunal at Berne sentenced three Swiss to death and 14 others to prison terms on March 31 for espionage on behalf of a foreign power, believed to be Germany. In May a military court at Lucerne sentenced 45 persons to short jail terms for spreading false reports of alleged treasonable activities by a high Swiss army officer.

Because of its economic dependence upon German-controlled Europe, the Swiss Government was unable to pursue in its economic relations with the Reich the same independent policy that characterized its political and military relations. To obtain the raw materials and food needed to keep the nation's economy functioning, the Government was obliged to extend large credits to the Germans and to accept German orders of value to the Nazi war machine. The German wartime debt to Switzerland was estimated at 800,000,000 Swiss francs late in

May.

On October 30 the big Swiss armament firm of Sulzer Brothers was blacklisted by the British and American Governments for excessive cooperation with the Reich, including the refusal to submit to inspection of its business relations with the Germans. In a communiqué issued November 5, the Swiss Government denied that the firm had ever exported arms to Germany, exonerated its director, and warned all Swiss manufacturers that sanctions would be applied to any firm submitting to foreign control of its operations.

CIALISM.

SYNTHETICS. See topics listed under Substitute Materials.

syria and lebanon. Two republics on the east coast of the Mediterranean between Turkey and Palestine, mandated to France by the League of Nations on July 24, 1922, and proclaimed independent in 1941. Beyrouth (Beirut) is the seat of

the French High Commissioner.

Area and Population. The territory is divided into the Republic of Syria (capital, Damascus; area, about 72,560 square miles; estimated population, 2,487,000 in December, 1938) and the Republic of Lebanon (capital, Beyrouth; area, 3,470 square miles; population, 862,600 at 1935 census). Included in the Syrian Republic are the two semi-autonomous districts of Latakia (capital, Latakia; area, 2,310 square miles; estimated population, 372,000 in 1938) and Djebel Druse or Jebel Druze (capital, El Suweideh; area, about 2,700 square miles; estimated population in 1938, 71,000 excluding some 15,000 nomads who spend part of their time in the district).

The people are mainly Arabs and Arabic is the chief language, but there are considerable num-

bers of Turks, Kurds, Turkomans, Circassians, Armenians, Iranians, and Jews as well as about 28,000 Europeans. The chief cities, with 1935 populations, are: Damascus, 193,912; Aleppo, 177,313; Beyrouth, 134,655; Homs, 52,792.

Education and Religion. The entire mandated territory in 1938 had 809 public elementary schools (87,220 pupils), 1,313 private elementary schools (119,894 pupils), 514 foreign primary schools (17,984 pupils), 155 vocational schools (17,984 pupils), 33 secondary schools (1,584 pupils). There was also a French university at Beyrouth (641 students), an American university and a college at Beyrouth (444 students), an Arab academy, and agricultural colleges at Sélémié and Bekaa. The composition of the population by religions was: Moslems, 1,514,755 (including 1,075,816 Sunni Moslems); Christians, 505,419 (including 186,676 Maronites, 151,326 Orthodox, 66,762 Greek Catholics or Uniats, 32,859 Armenians, 28,885 Melkites, 8,887 Protestants, 7,305 Armenian Catholics); Jews, 16,526.

Production. Agriculture and stock raising are the main occupations. Livestock in 1939 included 2,631,000 sheep, 491,918 cattle, 90,030 goats, 80,-168 camels, 182,234 asses. Production of the chief crops in 1942 was officially estimated as follows (in metric tons): Wheat, 468,000; barley, 203,-000; corn, 33,000; millet and sorghum, 72,000; rice, 3,000. Wheat production for 1943 was unofficially estimated at 650,000 metric tons; barley, 250,000 in 1943; tobacco, 4,698 in 1941; olive oil, 13,000 in 1940-41; cotton, 5,000 in 1941; cotton-seed, 15,100 in 1940. The 1943 wool clip was estimated at 2,500 metric tons (2,730 in 1942). Chickpeas, lentils, wine grapes, raw silk, rice, fruits, and vegetables are other crops. Minerals are unimportant. Chief manufactures: Textiles, cement, macaroni, biscuits, soap, matches, beverages.

Foreign Trade. Full trade statistics have not been published since 1938 when imports (including bullion and specie) totaled 70,811,061 Syrian-Lebanese pounds (\$40,787,000) and exports 29,278,213 pounds (\$16,864,000). There is an important transit traffic through Syria and Lebanon

in peacetime.

Frovisional figures for general trade were (in millions of Syrian-Lebanese pounds): Imports, 38 in 1941 (57 in 1940); exports, 11 in 1941 (19 in 1940). The volume of imports declined from 640,000 metric tons in 1938 to 176,000 in 1941; of exports, from 460,000 metric tons in 1938 (excluding petroleum in transit from Iraq) to 30,000 in 1941.

Finance. Under the French mandatory administration, Syria and Lebanon had separate budgets and also a "common interests" budget covering customs, posts, telegraphs, etc. Actual receipts of the "common interests" budget were 12,237,189 Syrian-Lebanese pounds in 1938 and 7,742,500 in 1939. Estimated receipts of the Syrian Republic for 1940 were 11,746,000 pounds; of the Lebanese Republic, about 6,500,000 pounds. The Syrian-Lebanese pound (equal to 20 French francs), exchanged at \$0.576 in 1938 and \$0.502 in 1939. The official exchange rate in 1942 was \$0.4556.

Transportation. Syria in 1943 had over 900 miles

Transportation. Syria in 1943 had over 900 miles of railway line, providing connections with Palestine, Turkey, and Iraq, and about 6,569 miles of roads. Beyrouth is the chief port of call but Tripoli is used for the important transit trade and is the terminal of one branch of the oil pipeline from the Iraq oil fields. During 1942 the British completed a 175-mile strategic railway linking Beyrouth di-

rectly with Haifa in Palestine and making possible direct railway traffic between Cairo and Istanbul. A 550-mile surfaced highway between Damascus and Baghdad in Iraq was also completed in 1942.

Government. For the political status of Syria and Lebanon preceding the British-Free French invasion in 1941 and the terms of the armistice of July 14, 1941, see 1942 Year Book. With the ousting of the Vichy regime, the British forces remained in military occupation while Gen. Georges Catroux, named Free French High Commissioner, assumed the civil functions formerly performed by the Vichy Government's High Commissioner at Beyrouth. On Aug. 7, 1941, the British Government in a letter to Gen. Charles de Gaulle guaranteed the Free French "a predominant position in Syria and Lebanon over any other European power," including Britain. In agreement with the British and in accordance with previous pledges, General Catroux proclaimed the independence of Syria on Sept. 16, 1941, and of Lebanon on November 26. The Free French undertook to guarantee both new republics by treaty. However it was indicated that the final status of the two territories would not be determined until the end of the war.

President of the Syrian Republic at the beginning of 1943, Sheik Tajeddine Hassani; Premier, Husni Bey Barazzi (Nationalist). President of the Lebanese Republic, Alfred Naccache, who assumed office Apr. 6, 1941; Prime Minister, Riad Solh. For developments in 1943, see below.

### HISTORY

Constitutions Restored. After the battles of El Alamein and Stalingrad late in 1942 had eliminated the German invasion threat from the Middle East, political events in Syria and the Lebanon during 1943 moved rapidly to a climax which brought actual independence to both republics at the close of the year.

The nationalist movements in both Syria and Lebanon refused to accept the French thesis that determination of the final status of the two republics must await the end of the war, and be preceded by the conclusion of treaties with France. The demand for immediate steps toward self government was reflected in the resignation of the Syrian Cabinet early in January. On January 9 Jamai Ulshi succeeded the Nationalist Bloc leader, Husni Barazzi, as the Syrian Prime Minister.

This was followed by the death on January 17 of Sheik Tajeddine Hassani, whom the Fighting French High Commissioner, Gen. Georges Catroux, had named President of the Syrian Republic in 1941 over nationalist opposition. The nationalists made it plain that they expected a voice in the selection of a new President. They had the support of the British Minister to Syria and Lebanon, Maj. Gen. Sir Edward L. Spears, who reflected the British Government's view that the security of British and Allied military bases throughout the Middle East depended upon the friendly support of the Arab peoples.

of the Arab peoples.

The French National Committee in London yielded to the nationalist demands. On January 24 it was announced that General Catroux had been empowered to make the necessary arrangements for the restoration of constitutional regimes in Syria and Lebanon, suspended following the outbreak of war in 1939. In March the High Commissioner restored the constitutions and called parliamentary elections, which were held in Syria in July and in Lebanon in September.

Meanwhile General Catroux was absorbed in

the negotiations which led to the amalgamation of Gen. Charles de Gaulle's French National Committee and Gen. Henri Honoré Gtraud's North African administration at Algiers on June 4. Shortly after its formation, the French Committee of National Liberation, of which Catroux was a member, appointed Jean Helleu as its Delegate General, or High Commissioner, in Syria and Lebanon. (Gabriel Puaux, who served as High Commissioner during Catroux's absence, was transferred to the post of Resident General of French Morocco.)

Nationalist Governments Formed. The elections in Syria gave the Nationalist Bloc a clear majority in the Chamber of Deputies at Damascus. Nationalist Deputies proceeded to elect one of their leaders, Shukri Quwatly, as President of Syria on August 17, and a Nationalist Cabinet was formed under Premier Saadallah el Jabry. The Arab governments of Egypt and Iraq immediately recognized the independence of Syria. Colonel Oliva-Roget, known for his sympathetic attitude toward the Nationalist Bloc, was appointed French Delegate to Damascus—a move which disposed the Syrian leaders to display restraint and moderation during the subsequent crisis in Lebanon.

The elections held early in September in Lebanon likewise resulted in a victory for the nationalist elements, composed of both Christian and Moslem Arabs. While by no means free of vote-buying and other fraudulence, the Lebanese elections were reported to be far more honest than the French-controlled elections of the prewar years. They took place during an intense wave of anti-French nationalism, attributed in part to governmental scandals and in part to the obvious reluctance of French local officials to give up the powers promised to both Syria and Lebanon in General Catroux's 1941 proclamation. Candidates believed to have French backing were defeated all along the line.

The new Lebanese Chamber of Deputies, composed of 30 Christians and 25 Moslems, elected as President of the republic on September 21 Bechara El-Khoury, a Maronite Christian of definitely nationalist tendencies. The President then appointed as Premier the Moslem nationalist, Riad Solh, one of the pro-independence leaders recently ousted from office by the French authorities.

The new governments of Syria and Lebanon were now faced with three major problems. They had to conclude a permanent arrangement for future relations with France. They had to work out an arrangement for future relations between Syria and Lebanon. And they had to determine their attitude toward the movement for Arab federation, in regard to which the leaders of the other Arab states were then conducting negotiations. An official delegation from Syria was in Cairo for discussions on the Arab federation issue when the Lebanese Government brought the question of French relations to the foreground.

tion of French relations to the foreground.

Lebanon Votes Freedom. On November 8 the Lebanese Parliament unanimously adopted a declaration of policy prepared by Premier Solh, which called for the deletion from the constitution of provisions incompatible with full sovereignty and independence. Among the specific demands listed in the declaration were the adoption of a Lebanese national flag, the adoption of Arabic as the sole government language, and the reduction of the status of the French Delegate General to that of a diplomatic mission. The Lebanese also demanded full control over the administration of certain governmental departments and of the so-called "common interest funds" derived from

customs receipts, harbor dues, etc. They asked for the control of Lebanese military forces, but did not request immediate concessions that would interfere with Allied security and prosecution of the war, such as the control of Beyrouth harbor.

Premier Solh's move was made while Delegate General Helleu was in Algiers, discussing with the French Committee for National Liberation the concessions that it would make to Syrian and Lebanese demands for fulfillment of the French pledge of independence. Immediately after the Chamber of Deputies' vote, French authorities in Lebanon imposed a strict censorship on outgoing messages, suspended publication of local newspapers, and took military measures to maintain order under a modified form of martial law.

These measures provoked an outburst of resentment not only in Lebanon but also in Syria and the rest of the Arab world. Premier Solh demanded the immediate restoration of civil rights. The reply of Delegate General Helleu, who had hurried back to Beyrouth from Algiers, was to order the arrest of the Lebanese President, Premier, and other members of the Cabinet and the Chamber of Deputies on November 11. The constitution was suspended, the Government and Chamber of Deputies dissolved, and a pro-French politician, former President Emile Edde, was appointed chief of the

Lebanese state.

These drastic measures were taken in accordance with the instructions of the French Committee of National Liberation, according to M. Helleu, and without consulting either the British Minister or Lieut. Gen. W. G. Holmes, commander of the British Ninth Army stationed in Syria and Lebanon. The French authorities took the position that the Lebanese nationalists knew Helleu was returning to Beyrouth from Algiers with proposals for eventual independence approved by the French Committee and that they had chosen to present him with a fait accompli rather than attempt to negotiate a settlement satisfactory to both parties. Consequently they said they would not be "bullied" into acceptance of the nationalists' unilateral program.

French Capitulate. The French authorities were forced to withdraw from this position by the violence of the reaction to their measures of November 11. Rioting and anti-French demonstrations spread throughout Lebanon and into Syria. A general strike paralyzed Beyrouth and other Lebanese cities. Guerrilla bands began to form in the mountains and a country-wide revolt seemed imminent. There were demonstrations of sympathy throughout the Arab world. The Governments of Egypt and Saudi Arabia protested indignantly to the

French Committee at Algiers.

The British Government, with the support of the United States, protested the French actions and insisted that immediate steps be taken to restore self government in Lebanon and to fulfill the French pledges to both Syria and Lebanon. The British made it plain that they would intervene with military force, if necessary, to prevent the Lebanese disorders from developing into anti-liked substrate in the protect of the Nicola States.

Allied outbreaks in other parts of the Middle East. While protesting that the Lebanese events had been exaggerated, the French Committee rushed General Catroux to Beyrouth to bring order out of the developing chaos. Arriving there on November 17, he entered into negotiations with the French, Arab, and British spokesmen. Delegate General Helleu, whose dismissal had been requested as one point in a British plan for solution of the controversy, was recalled to Algiers on

November 20. He was replaced by Yves Chataigneau. The next day the French Committee approved Catroux's recommendations for the immediate release of the Lebanese President and Ministers, the reinstatement of President Bechara El-Khoury, and the opening of negotiations for freeing both Syria and Lebanon within the framework of the League of Nations mandate held by the French.

The release of the Lebanese leaders on November 22 and the withdrawal of French troops from the streets of Beyrouth was hailed with enthusiasm by Lebanese crowds. But neither the Lebanese nor the British accepted the French demand that the President must select a new Cabinet to replace that of Premier Solh. On November 24 the French Committee agreed to the reinstatement of all the members of the dissolved Government and Chamber of Deputies, thus repealing all of the decrees of November 11. General Catroux broadcast an appeal to the Lebanese people to have confidence in France "to respect your rights and liberties." He was loudly cheered as he passed through Beyrouth crowds to pay an official visit to President Bechara El-Khoury and Premier Solh on November 24. Return visits paid by the Lebanese national leaders signified the end of the crisis. The British and U.S. Governments both registered their approval of the settlement.

registered their approval of the settlement.

Independence Achieved. Immediately afterwards General Catroux opened negotiations with the Syrian and Lebanese Governments for the permanent regulation of their relations with France. Both Governments insisted on proceeding on the basis of complete sovereignty. At the end of November the Syrian Chamber of Deputies voted to amend the constitution to eliminate the High Commissioner's power to veto legislation. The Lebanese Government insisted that the amendments to the Lebanese Constitution approved by the Chamber of Deputies were now in force. At a secret meeting on December 1 the Chamber voted a resolution designating the Lebanese flag as the sole recognized banner of the republic. It also authorized legal proceedings against Emile Edde and other Lebanese who collaborated with his French-ap-

pointed government.

Meanwhile the Syrian and Lebanese Governments entered into an agreement for a common front in concluding negotiations with France, and for the establishment of a Syrian-Lebanese joint commission to consider mutual problems. As a result of the ensuing negotiations, General Catroux and the Syrian-Lebanese representatives signed on December 23 an agreement under which France transferred to the two republics for the duration of the war all legislative and administrative functions hitherto exercised by French authorities, effective Jan. 1, 1944. It was agreed, among other things, that all proceeds of the customs, postoffice, and telegraph services would henceforth be distributed equally between the two republics, with 20 per cent going into a common fund. This arrangement was approved by the French Committee of National Liberation, according to an announcement of December 25. However a spokesman for the Committee said that the accord did not void the French mandate over Syria and Lebanon.

French mandate over Syria and Lebanon. See Great Britain, ECYPT, Iraq under *History*.

TAJIK SOVIET SOCIALIST REPUBLIC. See Union OF SOVIET SOCIALIST REPUBLICS under Area and Population.

TAIC, STEATITE TAIC. Tale is a hydrous magnesium silicate; tale low in lime and iron oxide, generally with less than 1½ per cent of each, is considered to be of steatite grade, and sometimes is known simply as steatite. Steatite talc has come into war prominence as the ceramic material for radio and radar insulators and underwater sound instru-

ments, for which a low power loss is essential.

Only about 5 per cent of all talc mined is of steatite grade. Total mine production of tale and soapstone in the United States, according to the Bureau of Mines, in 1942 was 350,554 tons, of which 305,392 tons was ground for sale. About 80 per cent of steatite production is in southeastern California, in the vicinity of Keeler, the balance being mined in Montana and New Mexico. Principal nonsteatite talc producing States are New York, which mines more than one-third of the national total, Vermont, North Carolina, California, Georgia, Maryland, and Nevada. Principal world producers of talc, pyrophyllite (a hydrous aluminum silicate), and soapstone in 1938, the last year for which complete figures are available, were United States (193,025 tons), Manchuria (81,-215 tons), Italy (53,511 tons), Norway (23,703 tons), and British India (18,888 tons).

To provide adequate supplies of steatite talc for war uses, the War Production Board on Oct. 13, 1942, issued Order M-239 which forbade the use, sale, and delivery of steatite except for (1) insulators in communications, radio, radar, and underwater sound instruments; (2) spark plugs for certain war industries; (3) filtering of foods, flavoring extracts, and medicines; and (4) medicines and health supplies, not including talcum powder and cosmetics. The order was liberalized Feb. 6, 1943, to permit its use in electrical and heat insulation products (not including refrac-tories), electric light bulbs, and experimental work. By Apr. 29, 1943, production and supplies were sufficient to enable further amendment removing all delivery and use restrictions, but establishing control over production and grading and providing a system of inventory control based on maximum consumer stocks.

Principal uses of talc, pyrophyllite, and ground stoapstone sold by producers in the United States in 1942, according to the Bureau of Mines, were paint (filler), 32 per cent; ceramics, 13 per cent; roofing, 13 per cent; rubber, 10 per cent; paper, 8 per cent; toilet preparations, 5 per cent; insecticides, 4 per cent; and foundry facings, 2 per cent. Steatite tale sold during 1943 for as much as

\$43 per ton, f.o.b. mill. Most other grades ranged from \$13 to \$18.

CHARLES T. POST.

TANGANYIKA. A territory in East Africa administered, since 1919, by Great Britain under a League of Nations mandate. Area, 374,131 square miles. Population (1940), 5,231,983 (5,191,709 natives, 33,800 Asiatics, and 6,474 Europeans). Chief towns: Dar es Salaam (capital), 33,147 inhabitants, Kigoma, Tanga, Tabora, Lindi, Mikindani, and Kilwa. Education (1941): 20,109 students englich. 8,109,071 pro-ph/d rolled; £102,971 expended.

Production and Trade. The chief crops are sisal, coffee, cotton (51,000 bales), tea, sugar, groundnuts, sesame, and copra. Other important products include gold, diamonds, salt, tin, ghee, hides and skins, and timber (pencil cedar, mahogany, ebony, etc.). Livestock (1942): 5,593,717 cattle, 2,839,531 goats, 1,978,987 sheep. Trade (1941): imports £3,656,497; exports £5,679,861. The main import items were cotton piece goods, foodstuffs,

iron and steel manufactures, gasoline, and kerosene. Sisal, gold, cotton, coffee, hides, and skins were the main exports. Shipping (1939): 458 steamers (exclusive of coastal ships) cleared the ports. Roads (1942): 22,617 miles. Railways (1942): 1,377 miles.

Government. Budget (1943): £3,183,000 appropriated for expenditure. In 1942 revenue totaled £3,147,000; expenditure £3,132,000. The administration is under the control of a governor, assisted by an executive council. There is a legislative council of 13 official members and not more than 10 nonofficial members. Governor, Sir Wilfrid Jackson (app. June 19, 1941).

TANGIER. An internationalized district in northwestern Africa, including the port and city of Tangier, situated 15 miles across the Strait of Gibraltar from the British fortress. Area, about 225 square miles; estimated population, 80,000—mostly Moslems but including some 17,000 Europeans and 7,000 Jews. The city of Tangier had about 45,000 in the literature. inhabitants.

Commerce, agriculture, fishing, and cigarette-making are the chief occupations. Leading crops are wheat, barley, and chickpeas. Imports in 1938 were valued at 94,693,830 French francs; exports, 11300,986 francs; Exports, 1200,986 francs; Exports, 1200, 11,380,286 francs. A French-controlled railway connects the city of Tangier with Fez, French Morocco, and with the French North African railway network. Highways and roads extend about 65 miles. Budget estimates for 1939: Receipts, 29,-

795,500 francs; expenditures, 29,653,312 francs.
Tangier was demilitarized, neutralized, and placed under the control of an international com-mission under the General Act of Algeciras of 1906, a series of agreements concluded in 1911 and 1912, a convention signed by Great Britain, France, and Spain on Dec. 18, 1923, and a protocol added to the convention on July 25, 1928. The protocol accorded Italy almost equal rights with the other three signatory powers in the administra-tion of Tangier. For the international government established under the Tangier Convention, see the 1941 Year Book, p. 729. This administration was unilaterally abolished by Spain during 1940 over the protests of Great Britain and the United States. On June 14, 1940, troops from Spanish Morocco occupied Tangier "to guarantee the neutrality of the Zone and the City." The following November 4 the commander of the Spanish forces assumed the title of Military Governor of Tangier, representing the High Commissioner of Spanish Morocco, and disbanded the international administrative agencies. On November 23, the Spanish Cabinet approved legislation which, in effect, incorporated Tangier in Spanish Morocco. Spanish officials assumed control of most of the Zone's administrative services and also of economic and political affairs. On Mar. 16, 1941, they ousted the Mendoub, who was appointed by the Sultan of Morocco to supervise native affairs in the Tangier Zone. He was replaced by a Spanish-appointed native Pasha. The Spanish Military Governor in 1943 was General Iriarte. For 1943 events, see below.

History. With the open connivance of the Spanish authorities, the Tangier Zone remained a hothed of Axis espionage and anti-Allied propaganda dur-ing 1943. The danger that Tangier might be used as a base for an Axis attack upon Allied communications in North Africa kept large American forces tied down in adjacent areas of French Morocco during most of the year (see Morocco under History).

The refusal of Great Britain and the French

authorities at Algiers to recognize the Spanish occupation of Tangier was again emphasized by developments. In January the Spanish High Commissioner formally affirmed that "Tangier forms part of the (Spanish) Moroccan Protectorate." The British Consul General in Tangier immediately advised him that Great Britain reserved all her rights under the Tangier Statute of 1925 and the Protocol of 1928. On March 4 the Spanish authorities in the Zone took over the postal, telegraph and telephone services, which had been operated by the French Ministry of Posts and Telegraphs. This brought an "energetic protest" from Gen. Henri Giraud, the French High Commissioner for North Africa.

At the end of May Spanish police in Tangier arrested and beat up more than 300 young Jews and Arabs who had volunteered at the French Consulate for military or labor service in French Morocco. Some of these youths were reportedly deported to Spanish Morocco. The police also picketed the office of a local British-owned newspaper, the Tangier Gazette. These actions were denounced as a violation of the interim Anglo-Spanish agreement of February, 1941, regarding the war-time administration of Tangier (see 1942 Year Book) in another formal protest registered by the British Consul General.

TARIFF COMMISSION, U.S. An independent agency of the U.S. Government, created in 1916, which investigates and reports upon tariff matters. It also handles cases of unfair practices in import trade. The Committee makes such investigations and reports and furnishes such information as may be required by the President, the House Ways and Means Committee, the Senate Finance Committee, or either branch of Congress. The full Commission consists of six members, appointed by the President and confirmed by the Senate for terms of 6 years each, one term expiring each year. Not more than three commissioners may be of the same political party. The work of the Commission falls into two groups, general administration and auxiliary services under the Secretary, and professional, scientific, and technical work under the Planning and Reviewing Committee. At present the major part of the Commission staff is assigned to activities involving extensive studies of a technical and economic nature in cooperation with the war agencies. Chairman: Oscar B. Ryder.

TASMANIA. See Australia under Area and Population.

TAXATION. President Roosevelt, in his budget message to Congress in January, 1943, stated that "we should strive to collect not less than \$16,000,000,000 of additional funds by taxation, savings, or both during the fiscal year 1944." Such additional receipts, along with expected collections of \$35,000,000,000 from existing taxes, were expected to cover approximately 50 per cent of all Government expenditures, then estimated at \$104,000,000,000 for the year to end June 30, 1944.

Congress failed to authorize additional taxes in the course of 1943, although important changes were effected in tax legislation. Bills to provide a small fraction of the huge sums requested by the President were passed in the House and approved by the Senate Finance Committee, with final enactment scheduled at the beginning of the 1944 session of Congress. A good deal of time elapsed before Congress went to work on a new revenue law because of the controversy that developed over pay-as-you-go legislation. When this issue was settled, a Congressional revolt developed against the Administration's tax proposals, particularly after it became evident that total expenditures would fall materially below the budget estimates and revenues would be larger. Neither house of the legislature, therefore was ready to provide materially more than \$2,000,000,000 of added tax revenues to the Federal Government.

Pay-As-You-Go Legislation. The lowering of personal income tax exemptions in the War Revenue Act of 1942, by adding some 23,000,000 persons to the income tax rolls, had greatly complicated the collection problems. It was reported that numerous wage earners who had never paid income taxes before would ignore their obligation, and that the Treasury would be confronted with an almost impossible collection problem in trying to force the payment of this levy. Withholding at the source, the obvious solution, required placing collections on a current basis. Nation-wide popular support was accorded the plan of Beardsley Ruml, chairman of the board of the Federal Reserve Bank of New York, to "forgive" taxes on 1942 incomes so as to place all taxpayers on a current basis, thus making it possible to withhold at the source the bulk of income taxes due on wages and salaries. The Treasury opposed the Ruml plan, however, on the ground that forgiveness of the tax on 1942 incomes would benefit chiefly persons in the higher brackets, and thus would run counter to the principle of progressive taxation which the Treasury has vigorously espoused.

The Ruml plan was rejected by the House of Representatives on three successive votes, although by quite narrow margins. After several unsuccessful attempts to put through a compromise, the Current Tax Payment Act was finally passed and signed by the President on June 9, 1943. As enacted, this law abated 75 per cent of the Federal income tax payable by individuals on either 1942 or 1943 incomes, whichever was the lower. The sums not abated are payable one-half on Mar. 15, 1944, and one-half on Mar. 15, 1945, in addition to the current tax then due. Income tax payments made on March 15 and June 15, 1943, were treated as current payments on 1943 income. Where the tax due for the forgiven year did not exceed \$50 it was abated in full, and an abatement of \$50 was granted the taxpayer owing between \$50 and \$66.67. The Current Tax Payment Act also provides that employers withhold 20 per cent of wages and salaries beginning July 1, 1943. after deducting exemptions at the annual rate of \$624 for single and \$1,248 for married persons, and \$312 for each dependent. Members of the armed forces, clergymen, agricultural workers, and domestics are not included under the withholding provisions.

The law changed drastically the method of filing personal income tax returns. Persons receiving wages and salaries of more than \$2,700, if single, and \$3,500, if married, and those expecting income in other forms of more than \$100, must file an estimate of the current year's taxable income and of withheld taxes on March 15, paying the balance of taxes found to be due for the year in four quarterly installments. The taxpayer may re-

vise this estimate of annual taxable income on each quarterly payment date. A penalty of 6 per cent is imposed for underestimating income by more than 20 per cent, and in the case of farmers by more than one-third. A final return for each year is to be filed on March 15 of the following year, and any additional tax is then payable. If payments were excessive, a refund of the overpayment is due the taxpayer.

One provision of the law reduces further taxes due on 1942 incomes from members of the armed services. Taxes owing at time of death by any person in the service are abated in full, and a special exemption of \$1,500 is allowed members of the armed forces over and above ordinary exemp-

tions.

The Current Tax Payment Act, by accelerating receipt of personal income taxes in the Treasury and by providing for payment of half of the taxes on 1942 incomes not abated, was expected to add \$3,300,000,000 to Treasury revenues for the fiscal year 1944. Actual figures, however, indicated that collections would be more than \$5,000,000,000 greater, so that when Secretary Morgenthau presented proposals for a new revenue measure to the House Ways and Means Committee, he asked for \$10,500,000,000, instead of the \$16,000,000,000 first sought by the President. Mr. Morgenthau's program included \$6,530,000,000 to be raised through increases in the personal income tax; \$1,140,000,000 from a rise in the corporate normal and surtax from 40 to 50 per cent; \$2,490,-000,000 from additional excise taxes, and \$400,-000,000 from higher estate and gift taxes. Members of both parties criticized these proposals as excessive and unnecessary, and the House Ways and Means Committee proceeded to write a tax bill of its own of far less ambitious proportions. The 1943 Revenue Bill. The House of Representa-

tives finally passed on November 24 a revenue bill that was expected to provide \$2,139,000,000 of additional taxes to the Treasury. Almost twothirds of this total was to be produced by increased excise taxes, including a rise from \$6 to \$9 per gallon in the excise on distilled spirits, from \$7 to \$8 per barrel on beer, and additions of 50 to 100 per cent in the tax on wine. Higher rates were specified in the bill on electric light bulbs, furs, luggage, toilet preparations, jewelry, telephone and telegraph messages, and admissions. The excise on passenger transportation was to be lifted from 10 per cent to 15 per cent. First-class local postage rates were to be increased from 2¢ to 3¢ per ounce, the air mail rate from 6¢ to 8¢, and several other postage rates were to be raised proportionately. It was specified, however, that these higher postage rates should lapse six months after the end of the war.

The House revenue bill provided for the integration of the Victory tax with the normal personal income tax, to meet popular demand for a simplification of the income tax structure. Abolition of the earned income credit and an increase in the normal tax from 6 to 10 per cent were specified, and married persons filing separate returns were to receive only a single person's exemption. The bill raised the corporation excess profits tax from 90 to 95 per cent, but increased the specific credit under this tax from \$5,000 to \$10,000 to aid small enterprises. Also, corporations using invested capital in determining their excess profits tax credit were allowed 1 per cent less on invested

capital above \$5,000,000. The Senate Finance Committee approved, at the end of the session in December, a tax bill which reduced several of the excise tax increases approved by the House and rejected the plan to simplify the personal income tax, the Victory tax being retained at a 3 per cent rate, without post-war refund. The earned income credit was to be disallowed, as in the House bill. The excess profits tax rate increase was allowed to stand, but the reduction in the percentage return allowed on invested capital was made less severe. The Senate Finance Committee bill was expected to yield \$2,284,000,000. Final enactment of the revenue measure into law was left for the 1944 session of Congress.

The Senate Finance Committee also was asked by the Treasury for \$10,500,000,000 in addi-tional taxes. Like the House Ways and Means Committee, the Senate Committee flatly rejected the Treasury's proposals. An effort to adopt a general Federal sales tax failed to win the approval of the committee, owing to bitter Administration opposi-

tion and hostility from organized labor.

Contract Renegotiation Revision. The revenue bill passed by the House included a number of changes in the law providing for renegotiation of Government contracts. Most important of these changes

(1) Exemption from renegotiation was extended to concerns who deliver less than \$500,000 of goods and services under war contracts in any one year.

(2) Contracts for agricultural commodities were ex-

(3) Contractors could appeal to the United States Tax Court on matters of fact as well as law in renegotiation

cases.
(4) A five-man Joint Price Adjustment Board (q.v.) was set up to hear appeals from decisions by renegotiation officers of the individual procurement agencies.

The Senate Finance Committee ordered far more drastic changes in contract renegotiation procedure, adoption of which, the Treasury claimed, would make the renegotiation statute ineffective. The Senate Finance Committee bill exempted contracts for "standard commercial articles" from renegotiation. It provided that subcontractors whose products did not actually enter into goods bought by the Government, such as machine tool and other machinery manufacturers, were to be exempted from renegotiation retroactively. The committee bill also specified that renegotiation cases already closed could be appealed, and made the Court of Claims the appeals tribunal. Perhaps most important was the provision in the committee's bill that renegotiation should apply to income after, rather than before, Federal income and excess profits taxes. Treasury spokesmen claimed that these changes would not only make renegotiation ineffective for the future, but would make it necessary for the Treasury to refund very large sums to corporations which had already agreed to settlements with the Government involving repayment of billions of dollars.

Social Security Changes. Social Security bills were introduced in Congress by Senators Wagner and Murray and Representative Dingell to put into effect recommendations of the National Resources Planning Board for a "cradle-to-grave" insurance plan, which the President had transmitted to Congress on March 10. These bills provided for increased benefits and wider coverage, with the payroll tax increased to 6 per cent for employees and 6 per cent for employers, as compared to the existing rate of 1 per cent for each. Congress not only refused to act upon these proposals, but instead suspended for 60 days the increase to 2 per cent in the payroll tax scheduled to take place under existing law on Jan. 1, 1944. Senator Vandenberg sponsored an amendment to the tax law

to freeze the 1 per cent payroll tax rate to Jan. 1, 1945.

Federal Tax Policy. The attitude of Congress toward tax legislation during 1943 reflected more clearly than any other actions of the legislature the refusal of that body to proceed with reform measures during the war. While appropriations for war were voted freely, and the debt limit was lifted to \$210,000,000,000 without resistance, the President's executive order limiting salaries to \$25,000 after taxes was rescinded by law. A rider was attached to the bill to lift the debt limit allowing paid on Dec. 7, 1941. The President, fearing to interfere with Federal financing, permitted this measure to become law without his signature. Congress ordered both the National Resources Planning Board and the National Youth Administration liquidated in 1943.

Congress also refused to consider substantial increases in income taxation on either individuals or corporations. While the proximity of the Presidential elections was a factor, it is more correct to say that the stand of the majority of legislators toward taxes was a culmination of a more conservative trend that had been in evidence in the

preceding session.

State Taxation. The accompanying table shows State tax collections in major categories for the fiscal year 1943. For tax laws enacted, repealed, or amended see the article on STATE LEGISLATION. See also Social Security.

JULES I. BOGEN.

TAX COURT OF THE UNITED STATES. An independent agency of the U.S. Government (formerly the U.S. Board of Tax Appeals, created by the Revenue Act of 1924). Its function is to determine, after hearing, whether there is a deficiency or an overpayment, where deficiencies have been determined by the Commissioner of Internal Revenue, in income, profits, estate, gift, and unjust enrichment taxes, and personal holding company surtaxes; to adjudicate controversies relating to excess profits on Navy contracts and Army aircraft contracts; and to review the action of the Commissioner in deficiency and refund cases founded on claims of abnormalities under excess profits and processing tax statutes. Presiding Judge: J. Edgar Murdock.

TENNESSEE. An east south central State. Area: 42,-246 sq. mi. Population: 2,915,841 (1940 census); 2,862,211 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia.

each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of monitoring has been appeared of the time of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Book, p. 430.

Elections. See the article Elections in the UNITED STATES; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE LEG-ISLATION.

Officers. The Governor is Prentice Cooper (Dem.), inaugurated in January, 1943, for his third four-year term; Secretary of State, Joe C. Carr; Attorney General, Roy H. Beeler.

TENNESSEE VALLEY AUTHORITY (TVA). A corporation created by Congress in 1933 to develop the Tennessee River System in the interest of navigation, control of floods, and the generation and disposition of hydroelectric power. It conducts a program of water control and conservation, including fertilizer research. The TVA is constructing a system of dams (q.v.) which will provide a nine-foot navigable channel from the mouth of the river near Paducah, Ky., to Knoxville, Tenn., 648 river miles. The Tennessee basin includes parts of seven States, an area of 41,000 square miles with a population of about 3,000,000.

The Corporations's power-producing system has an installed capacity of 1,639,000 kw, and new capacity authorized for war production purposes, with WPB allocations, will bring the total to 2,100,-000 kw in 1945. For war purposes the TVA is producing ammonium nitrate, pure elemental phos-

phorus, and calcium carbide.

As of June 30, 1943, the corporation had contracts for sale of power at wholesale with 80 municipalities, 3 counties, 45 cooperatives, and 22 privately owned utility companies. These agencies (the private companies excluded) distribute power to more than 500,000 ultimate consumers under retail rates agreed upon with the Authority. The corporation had contracts for bulk sales of firm and secondary power with 10 large industrial concerns. It is also providing power to 8 projects, plants, and bases of Federal agencies.

Since 1933 the corporation and various municipalities and nonprofit cooperative associations have purchased from utility companies the electric generating, transmission and distribution facilities in an area which includes substantially all of Tennessee except the northeastern portion, northern Alabama, and northeastern Mississippi. The contract prices for these properties have aggregated about \$116,000,000, of which the Authority's share, principally for generating plants and transmission facilities, has been about \$55,000,000.

There are now 28,000 employees. The standard workweek is 40 hours, with time and one-half for overtime for all hourly employees. Chairman: David E. Lilienthal.

WAYS, INLAND.

TENNIS. If it were not for the championships at Forest Hills in September one might review the 1943 tennis campaign in a few words. But Uncle Sam's generosity in granting passes to many stars in the service provided enough talent to produce the big show and once again the national tournament saved the sport from an otherwise colorless year.

Francisco (Pancho) Segura, the Ecuadorean with the two-handed grip, was made a top-heavy Favorite after his victories in the Pan-American, Eastern intercollegiate, national intercollegiate, New Jersey, Rye, and Southampton tourneys, and promptly justified his ranking by blasting Richard Bender, Pfc. Bitsy Grant, and Seymour Greenberg out of the blue-ribbon classic on the sacrosanct courts of the West Side Tennis Club. But it was Pancho's misfortune to run head-on into a wellmuscled Coast Guardsman, one Jack Kramer, in the semi-final round. Kramer, at his peak, scored 17 service aces and smashed Pancho's best offer-ings to all corners of the court to win at 2-6, 6-4, 7-5, 6-3.

Meanwhile Lt. (j.g.) Joe Hunt, one-time collegiate champion from Annapolis, was overcoming some rough sailing to reach the title round. He turned back the threat of Corp. Frank Parker, 8–6, 6–2, 6–3, then took the measure of Billy Talbert in four hard sets. Then Hunt met Kramer in the all-service final before a huge crowd. The score seesawed for two sets, then the naval lieutenant pulled up from 3-5 to take the sizzling third set at 10-8 and Kramer never came back. The final score read 6-3, 6-8, 10-8, 6-0. Ensign Ted Schroeder was unable to get away from his naval duties to defend the crown he had won in 1942.

The men's doubles title was captured by Kramer and Parker, who defeated Talbert and Pfc. David Freeman, 6–2, 6–4, 6–4, to succeed Talbert and Lieut. Gardnar Mulloy of the Navy as the cup holders. Blonde Miss Pauline Betz of Los Angeles retained the women's singles crown when she repeated her 1942 victory over Miss Louise Brough of Beverly Hills, 6-3, 5-7, 6-3. Miss Brough and Miss Margaret Osborne of San Francisco triumphed in the women's doubles for the second straight time while Miss Osbome and Talbert paired to capture the mixed doubles in a thrilling final with Miss Betz and Segura that ended at 10–8, 6–4.

Her victory at Forest Hills climaxed a most successful year for Miss Betz in singles competition. She also triumphed in the national indoor and clay-court championships. However, the titleholder figured in one of the season's biggest upsets when she bowed to Miss Marchetta Ruth Donnelly, 19-year-old Californian, an unseeded player, by 6-4, 6-4 in the Pacific Southwest tourney.

TEXAS. A west south central State. Area: 267,339 sq. mi. Population: 6,414,824 (1940 census); 6,336,554 (1943 nonmilitary estimate).

Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Book, p. 430.

Elections. See the article Elections in the United States; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE LEG-

Officers. The Governor is Coke Stevenson (Dem.), inaugurated in January, 1943, for a two-year term; Lieutenant Governor, John Lee Smith; Secretary of State, Sidney Latham; Attorney General, Gerald C. Mann. See Antimony; Aqueducts; Hurri-CANES.

TEXTILES. Over-all textile production in 1943 fell approximately 5 per cent below the peak level obtained in 1942, although in some branches of the industry—notably rayon—new production records were established. Failure of the industry to equal its 1942 performance was due primarily to increasing labor difficulties, while uncertain and absolutely unsatisfactory pricing methods also contributed to the industry's difficulties.

Failure to maintain output at the previously established record pace clashed with continued peak demand for military, export, and essential civilian purposes, thus creating serious new distribution problems for the industry. This was particularly in evidence in cotton and rayon goods. While in 1942 approximately 60 per cent of cotton goods production was against rated orders—for Government or essential civilian purposes—this share rose to over 67 per cent in 1943.

Priorities. Priority difficulties increased as the year

progressed and led to two significant Government actions toward the close of 1943. These were:

(1) The establishment of a new rating pattern system through the issuance of a new Conservation Order M-317 in conjunction with a basic revision in the Limitation Order L-99; and

(2) The issuance on Nov. 16, 1943, of a special consumer goods directive by the Office of Economic Stabilization (the so called Vinson Directive) for the purpose of stimu-lating the production of low-priced textile

and apparel goods.

The new textile priority system aims at a more equitable distribution of priority rated orders among all textile mills. It has such broad aspects however and-in the opinion of the textile industry-was delayed so long that considerable time will be needed to overcome the initial disruption in established trade channels between suppliers and users of yarn caused by it.

The Vinson Directive is aimed at an increase in production of low-priced textile and apparel goods but in the opinion of the industry it is not likely to attain this goal, because it is based on unsatisfactory profit margins. The directive establishes a method by which the War Production Board can issue orders for increased production of essential consumer goods, particularly in the low price category, and provides that, where such action is taken, the Office of Price Administration under certain circumstances may be called upon to grant price concessions for such products. The formula for these price concessions is based on a 2 per cent profit margin, before taxes, for manufacturers whose over-all profits are not larger than double the amount obtained during the base period 1936 to 1939. Where profits have been doubled over that period manufacturers can be asked to produce their assigned quotas under such programs at cost. By the end of the year no programs had actually been launched under this directive, although several were in preparation—notably one on bed linen and one on chambrays

European Relief. Toward the end of the year preparations were progressing rapidly for the anticipated large textile demands in connection with European relief and rehabilitation needs in the liberated areas. The Office of Foreign Relief and Rehabilitation Operations made some preliminary studies which indicated that approximately 35 per cent of the population in liberated Europe will be in need of textile relief. The OFRRO late in 1943 started to prepare two textile relief programs, each for 3,500,000 persons, and each based on an expenditure of approximately \$56,000,000. These programs are based on a typical man's wardrobe consisting of a mackinaw, sweater, trousers, shirt, cap, gloves, underwear, socks, and shoes; while the wardrobe for women is to include sweater, blouse, skirt, gloves, underwear, stockings, and shoes. Textile relief needs will be substantial but are to be handled in such a way that markets will not be unduly disturbed. They are expected to reach about 3 per cent of the total volume of the

Manpower. Manpower problems multiplied in the textile industry in 1943, reflecting both a loss in total workers and a decline in workers' efficiency. The total number of workers employed in cotton goods manufacture, which stood at 503,600 at the end of 1942, dropped to 472,000 by October of last year. Labor costs continued to increase. The hourly wage rate in cotton manufacturing increased to 59.3 cents, as compared with an average of 36.8 cents in 1936. Weekly average wage payments stood at close to \$25 at the end of 1943, as compared with \$13.31 in 1938.

The manpower problem in the industry was aggravated by the fact that existing price ceilings make it impossible for many mills to pay overtime rates. This was particularly pressing in instances where labor shortages forced mills to abandon three shift operations.

Textile prices last year showed little fluctuation, except for raw cotton. The Bureau of Labor group index of textile prices showed only minor gains in 1943 as shown in the following table:

INDEXES OF WHOLESALE TEXTILE PRICES (1926 = 100)

|                        |      |      |       | December |
|------------------------|------|------|-------|----------|
|                        | 1940 | 1941 | 1942  | 1943     |
| Textile products       | 73.8 | 84.8 | 96.9  | 97.7     |
| Cotton goods           | 71.4 | 94.2 | 112.4 | 112.9    |
| Rayon                  | 29.5 | 29.7 | 30.3  | 30.3     |
| Woolen & worsted goods | 85.7 | 96.6 | 110.4 | 112.5    |

Cotton Goods. Production of cotton fabrics in 1943, as measured in terms of raw cotton consumption, dropped approximately 8 per cent below the peak established in 1942. It is estimated at approximately 11,000,000,000 square yards, of which 4,000,000,000 square yards were for military purposes. Civilian production against preference ratings amounted to about 2,800,000,000 square yards so that for unrated civilian purposes only about 4,200,000,000 square yards were available. Production in 1942 was 8,300,000,000 yards. Despite the fact that production fell off slightly from 1942, it continued considerably above the prewar level of 8,600,000,000 square yards for the 1936–39 average.

Basic cotton goods statistics, as compiled by the Cotton Textile Institute, are shown in the following

table:

## COTTON GOODS ACTIVITY

|      | Raw Cotton<br>Consumed<br>(Bales) | Spindles<br>in Place | Spindles<br>Active | Processed,a<br>lb. per Ac-<br>tive Spindle |
|------|-----------------------------------|----------------------|--------------------|--|
| 1933 | 6,210,600                         | 31,442,174           | 26,894,860         | 122.8                                      |
| 1934 | 5,419,137                         | 30,938,340           | 27,742,462         | 105.7                                      |
| 1935 | 5,650,670                         | 30,889,444           | 26,700,946         | 117.6                                      |
| 1936 | 7,103,765                         | 29,253,444           | 24,664,428         | 148.5                                      |
| 1937 | 7,417,991                         | 27,700,194           | 25,419,110         | 151.9                                      |
| 1938 | 5,902,272                         | 26,704,476           | 24,774,004         | 132.0                                      |
| 1939 | 7,369,861                         | 25,986,620           | 23,731,050         | 163.3                                      |
| 1940 | 8,037,648                         | 24,943,302           | 23,585,938         | 177.0                                      |
| 1941 | 10,583,550                        | 24,532,146           | 22,926,485         | 229.0                                      |
| 1942 | 11,436,312                        | 23,843,858           | 22,133,175         | $258.4 \\ 234.2$                           |
| 1943 | 10,657,643                        | 23,340,190           | 22,752,220         |  |

a Processed per average active spindle, in lb.

Production of cotton yarns in 1943 dropped approximately 11 per cent below 1942 when production of carded yarn was 778,000,000 pounds and the production of combed yarns totaled 288,000,000 pounds. In 1942 sales yarn output had been almost double the production in 1939. Despite the high rate of output military and essential demands outran production to such an extent that the War Production Board in several instances had to resort to special yarn allocations by directives in order to safeguard supplies for certain essential civilian programs. Cases in point were the allocations for underwear mills and for children's and infants wear.

The outstanding development in the yarn field was the fact that, as far as military demands were concerned, less emphasis was placed on combed yarns so that the percentage of carded yarns taken

for war purposes increased.

Cotton goods prices—under rigid ceilings—held stationary in 1943. On May 4, 1942, the Office of Price Administration abandoned the "sliding scale" pricing principle for cotton goods under which these prices had been automatically adjusted to fluctuations in the price of raw cotton. Prices were fixed on the basis of 20.37 cents per pound of raw cotton. These same ceiling prices remained in effect throughout the balance of 1942 and 1943. These prices were generally regarded as adequate when they were established. However, late in 1943 mill margins dropped sharply, due to higher raw materials and manufacturing costs.

materials and manufacturing costs.

Rayon. Total 1943 rayon production, both yarns and staple fiber, is reported at 663,100,000 pounds by Rayon Organon, official statistical publication of the industry. This was an increase of 5 per cent over 1942 output of 632,600,000 pounds and estab-

lished a new all-time record.

Heavy wartime needs for rayon, for direct military purposes and to meet essential civilian apparel needs, drove consumption in 1948 to a level of 656,200,000 pounds, as compared with 620,600,000 pounds in 1942. Year-end stocks of rayon were down to the insignificant level of 7,900,000 pounds of which 6,100,000 were filament yarns, the bulk

of which was set aside for military orders and shipments to Latin American countries.

Rayon yam production amounted to 501,100,000 pounds in 1943 as compared with 479,300,000 pounds in 1942. The increase in rayon staple fiber output was from 153,285,000 pounds in 1942 to 162,019,000 pounds in 1943.

In analyzing production trends, Rayon Organon pointed out that there were divergent trends in the various branches of the industry. Viscose plus cuprammonium filament yarms showed an increase in production of 9 per cent to 338,511,000 pounds, principally due to the continued expansion of the rayon tire yarn program. Production of tire cords in 1944 is to be stepped up to a 240,000,000 pound annual rate. Acetate filament yarn output, on the other hand, showed a decline of 4 per cent from the 1942 figure of 168,855,000 pounds. The principal cause for the decline was seen in the shortage of essential raw materials.

Distribution of rayon yarn by principal users during 1943 and 1942 compared as follows:

| (Units are Millions of Pounds) |         |        |       |       |  |  |
|--------------------------------|---------|--------|-------|-------|--|--|
| ••••                           | Viscose | -Cupra | Ace   | tate  |  |  |
|                                | 1943    | 1942   | 1943  | 1942  |  |  |
| Hosiery                        | 40.8    | 44.9   | 8.4   | 4.4   |  |  |
| Other knit                     | 37.5    | 40.9   | 18.6  | 15.4  |  |  |
| Broad woven & tires            | 226.5   | 197.9  | 133.9 | 145.7 |  |  |
| Narrow woven                   | 10.1    | 8.4    | 0.3   | 0.3   |  |  |
| Miscellaneous                  | 16.5    | 9.4    | 1.6   | 1.5   |  |  |

Mounting military and essential civilian needs forced a further scaling down in rayon quotas for civilian uses, notably for hosiery and other knit goods production. Chief war uses of rayon are tire yarns and fragmentation, aerial delivery, flare and similar parachutes. Between 50 and 60 million pounds of rayon tire cord were shipped in 1943, so that production still is a long way from the new 240,000,000 pound goal. Reflecting the large demand for the tire yarn and parachute programs, a decided trend toward larger production of coarser grades of rayon developed in 1943. This was in reversal of a long-established trend toward increased output of finer rayon yarns.

Nylon. Nylon yarn capacity was greatly increased in 1943 but no figures are available for military security reasons. All nylon output is frozen for military purposes, principally for use in parachute cloths and for cords and tapes used in the manufacture of escape 'chutes. Only moderate quantities of nylon "rejects" were released in 1943 for civilian

purposes.

It is now believed that nylon capacity has been increased to such an extent that it could fill most needs of the full fashioned hosiery industry. (This statement is credited to Robert A. Ramsdell, sales director of the DuPont Co.'s nylon division.) Before the war nylon was in sufficient supply to account only for about 20 per cent of the hosiery industry's needs.

Extensive research into peacetime uses of synthetic fibers is now being conducted. Heavy nylon poundage will be needed, in addition to hosiery, for gloves, foundation garments, and woven goods. Vinyon will go into industrial filters, surgical goods, underwear, and shoes. Staple fiber will be widely used in sports fabrics, decorative fabrics, and floor coverings. Casein fabrics will go into dress goods, interlinings and in the place of wool. Glass and saran fiber have important industrial and decorative uses ahead. Soybean fibers have a large prospective market in the automotive industry.

Wool. Wool experienced a complete reversal in trend in 1943. This was highlighted by the fact that toward the end of the year the War Produc-

tion Board lifted virtually all restrictions on the use of wool. Two factors combined to account for this: a sharp cutback in military requirements and an increase in supplies from both domestic and foreign sources. As a result, emphasis shifted to the advisability of a reduction in Government owned stockpiles of wool accumulated since the start of

Over-all production of wool cloth in 1943 dropped approximately 10 per cent from 1942, according to (preliminary) figures compiled by the National Association of Wool Manufacturers.

The trend toward the end of the year revealed that sales of woolen and worsted mills to the Government were down about 50 per cent from previous peak levels while civilian fabric sales for men's wear showed an increase of 60 per cent and those for women's wear were up 45 per cent.

Machinery activity in the wool industry showed the following trend:

WOOL MACHINERY ACTIVITY (Weekly averages in thousands of active hours)

|                                       | January,<br>1942               | January,<br>1943                | December,          |
|---------------------------------------|--------------------------------|---------------------------------|--------------------|
| Looms                                 |                                | •                               |                    |

| Carpet and rug a Broad Narrow         | 122<br>105                     | 63<br>40                        | 53<br>36           |
| Spinning spindles Woolen Worsted      | 118,65 <del>4</del><br>120,806 | $\substack{124,120 \\ 112,922}$ | 115,024<br>106,763 |

<sup>e</sup> Carpet and rug looms converted to mfr. of blankets and cotton fabrics and looms now operating entirely on cotton yarns have been excluded beginning Jan. 1, 1942 and July 1, 1942, and July 1, 1942. respectively.

For the 53 week period from January to December, 1943, woolen and worsted looms of all types worked 2,730,000 hours on a weekly average basis compared to 2,813,000 hours during a like 53 week period in 1942. Woolen spinning spindles averaged weekly 124,613,000 hours for 53 weeks of 1943 (122,862,000 in 1942). Worsted spinning spindles averaged weekly 112,121,000 hours for the 53 weeks of 1943 (114,022,000 in 1942).

Raw wool consumption, including apparel and carpet, in 1943 totaled (on a scoured basis) 636,-139,000 lb. (603,555,000 in 1942).

Employment in the wool industry dropped approximately 13,000 workers. Employment in woolen and worsted mills established its peak in 1941. In 1942 it dropped 2.7 per cent, while in 1943 a further decline of 7.3 per cent occurred. Total mill payroll disbursements increased approximately 8 per cent in 1943.

Burlap. Consumption of burlap in the United States in 1943 fell to 387,000,000 yards as compared with 422,000,000 yards in 1942. Stocks in this country at the end of the year totaled 76,000,-000 yards as against 198,000,000 yards a year earlier. Stocks in Calcutta also declined during the year and stood at 511,000,000 yards at the end of 1943 as compared with 632,000,000 yards twelve months earlier. All buying of burlap in India was taken over by the Government in 1943 and handled through a Central Burlap Office. Large purchases were made in India for the account of the Government. However, transportation difficulties in India —rather than the shipping situation—thus far have held arrivals in the United States below expectations so that restrictions on the use of burlap had to be carried over into 1944.

tiles; Cotton; Fashion Events

H. E. LUEDICKE.

THAILAND (SIAM). A constitutional monarchy of southeastern Asia, occupied by Japanese armed forces Dec. 8, 1941. Capital, Bangkok. King, Ananda Mahidol, who was born Sept. 20, 1925, and ascended the throne upon the abdication of

his uncle, Prajadhipok, on Mar. 2, 1935.

Area and Population. Area, 200,148 sq. mi., excluding annexations from French Indo-China in 1941 (see 1942 YEAR BOOK, p. 651) and from Burma in 1943 (see below under *History*). Estimated population on Mar. 31, 1940, 15,718,000 (14,464,489 at 1937 census). Bangkok had 684,-994 inhabitants in 1937; Chiengmai, 544,000; Ayuthia, 300,000. Nine-tenths of the people are Thai (or Siamese). There were in Thailand at the time of the Japanese invasion some 500,000 Chinese, 500,000 Indians and Malays, 60,000 Cambodians, and about 2,000 Europeans and Americans.

Education and Religion. There is free and compulsory primary education, but only about 35 per cent of the adult population are literate. As of Mar. 31, 1939, there were 12,809 government, local public and municipal schools, with a total of 1,567,745 pupils. Bangkok has two state-controlled universities. The religious composition of the population in 1987 was: Buddhists, 13,752,091; Mohammedans, 626,907; Christians, 69,227; others, 15,880.

Production. Over four-fifths of the working population is engaged in agriculture and fishing. The chief crop is rice, which is both the main article of diet and the principal export. Production in 1940-41, 4,923,350 tons of cleaned rice. Other leading crops are tobacco, coconuts, pepper, and cotton. Rubber and tin ore are the most important products after rice. Rubber shipments were 45,000 metric tons in 1940. The metal content of tin ore exported in 1940 was 17,700 metric tons. Teak lumbering is an important industry. Manufacturing is largely restricted to lumber and rice milling.

Foreign Trade. For the year ended Mar. 31, 1941 merchandise imports were valued at 163,400,000 bahts (128,200,000 in 1939-40); exports, 257,600,000 bahts (208,700,000). Values of the chief 1940-41 exports were (in millions of bahts): Rice, 142.8; tin ore, 48.4; rubber, 39.3; teak wood, 5.9. Rice exports totaled 1,625,400 metric tons; rubber, 43,700 metric tons.

Finance. The budget was changed to the Christian calendar year basis beginning Jan. 1, 1941. Ordinary budget estimates for 1942 placed receipts at 210,000,000 bahts and expenditures at 259,000,000; in 1941 they balanced at 138,000,000 bahts. There was a treasury reserve estimated at 31,857,465 bahts on Jan. 1, 1942. Public debt on Sept. 30, 1941, £4,977,988 (external) and 24,707,100 bahts (internal). The baht exchanged at an average of \$0.3515 in 1940.

Transportation. At the time of the Japanese invasion, Thailand had about 2,048 miles of railway line, 5,574 miles of highways, and state-controlled airlines linking the principal cities. Air connections with Japan were opened in 1942. During 1939-40 a total of 960 vessels of 1,425,989 tons entered the

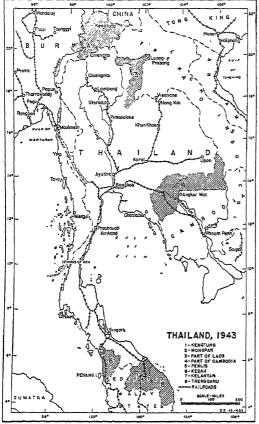

port of Bangkok.

Government. The constitution of Dec. 10, 1932 transformed Thailand from an absolute into a limited monarchy. Nominally the King exercises executive power through a State Council (Cabinet and legislative power through an Assembly of 182 members, to which the State Council is responsible Half the members of the Assembly were elected by popular vote and half nominated by the Crown Actually, there was an unofficial dictatorship headed by Premier (later Field Marshal) Luans Pibul Songgram (appointed Dec. 17, 1938). Al

though he reached his eighteenth birthday in September, 1943, King Ananda Mahidol remained in school in Switzerland. Premier Songgram and a few other leading members of the State Council cooperated with the Japanese invaders, who occupied the country beginning Dec. 8, 1941. On Dec. 21, 1941, the Premier signed a ten-year treaty of alliance with Japan and on Jan. 25, 1942, he declared war on Britain and the United States. This policy was repudiated by Thai diplomatic representatives in the United States and most of the other United Nations. It was reported to have been opposed by some ousted members of the Thai Government and Assembly. According to a Bangkok radio broadcast of Oct. 16, 1942, the Assembly agreed to transfer its powers to the Government for the duration of the war. For developments in 1943, see below.

History. Little news of developments in Thailand

History. Little news of developments in Thailand reached the outside world during 1943, except in the unreliable form of Japanese-controlled radio broadcasts. These broadcasts, coupled with moves made by members of the United Nations, indicated

# THAILAND'S TERRITORIAL ACQUISITIONS

By a treaty concluded in 1943 Japan transferred to Thailand the districts of Kentung (1) and Mongpan (2) in the Shan States and also the Unfederated Malay States of Perlis, Kedah, Kelantan, and Trengganu (5–8). In 1941 Japanese "meditation" brought about the cession to Thailand by French Indo-China of part of Laos (3) and part of Cambodia (4). The map shows the railway line Japanese military authorities were building to connect the Thai and Burmese railway networks.

that a propaganda battle was under way for the sympathy and goodwill of the Thai people. Meanwhile the war surged closer about the Japanese-dominated kingdom. There were increasingly heavy Allied air attacks upon Bangkok and other Thai communications centers by American and British planes based in both China and India.

Japanese propaganda for Thai consumption during the year tended to substantiate reports of widespread passive resistance to the Japanese and the pro-Japanese government at Bangkok. A statement by Premier Tojo of Japan, asserting that the Japanese had not violated Thailand's territorial integrity, was broadcast early in February. The Bangkok radio meanwhile issued frequent statements designed to counteract charges of graft leveled at Premier Songgram and to allay discontent arising from food shortages and the stagnation of trade. Songgram's wealth, the broadcasts declared, came from his private income and from sums contributed by merchants and the public "on such occasions as his birthday." On February 13 the Bangkok radio announced the resignation of the Premier and his entire Cabinet, but subsequent reports indicated

that Songgram had remained at the head of a re-

organized Cabinet.

Toward the end of February Gen. Chiang Kaishek, the Chinese Nationalist leader, appealed to the Thai people to resist the Japanese. He pledged Chinese aid in ousting the invaders and in restoring the complete independence of Thailand. The assurance that China had no territorial designs on Thailand was backed by President Roosevelt in a statement issued March 12. An important Japanese propaganda maneuver followed on July 5. The Tokyo radio announced that Premier Tojo had visited Bangkok on July 3-4 during his tour to "prepare the new policy for the southern region." While he was in Bangkok Tojo and Premier Songgram issued a joint communiqué announcing the transfer to Thai sovereignty of two districts in the Shan States and the four northernmost of the Malay States, shown in the accompanying map.

The two Shan States territories, Kengtung and Mongpan, had an area of 15,388 square miles, with a 1941 population of about 256,000. The four Unfederated Malay States of Perlis, Kedah, Kelantan, and Trengganu had a combined area of 14,770 square miles, or about one-fourth of the total area of British Malaya, and a population of about 1,100,000. These four states had been ceded by Thailand to the British in 1909. Japanese propaganda made the most of these cessions as reflecting Japan's honesty of purpose, its respect for Thai independence, and the benefits of the Japanese "co-prosperity sphere" policy. A formal treaty confirming the cessions was reported to have been signed in August.

Meanwhile Premier Songgram in a speech to Thai education officials reported by the Bangkok radio on April 6 declared the Government was "at its wit's end" as a result of the refusal of the public to cooperate in a government-sponsored program for the expansion of agricultural production and other forms of "self-improvement."

King Ananda Mahidol, still in school in Switzerland, observed his 18th birthday on September 20. He received greetings from Emperor Hirohito and other Japanese notables. On October 9 the Tokyo radio announced that Premier Songgram had assumed control of the Thai Foreign Ministry and appointed the previous incumbent Ambassador to Japan. A few days later the Thai Government recognized the Japanese-sponsored regime at Manila, which had been newly established to con-

solidate Japanese rule in the Philippines. See Burma under *History*.

THEATER. A calendar year in the theater consists, especially in New York, which must be regarded as the center of the American stage and, for the duration of the war at least, the principal playproducing city of the world, of virtually halves of two distinct seasons, separated, of course, by the summer vacation period. And under normal conditions surprisingly little difference in character is perceptible as one of these seasons gives way to the next. The year 1943, however, proved an exception to this generality. Its first half disclosed an approximately equal, and therefore exceptionally good, ratio between the creditable and the discreditable and, by the same token, between the successes and the failures. But by early autumn an extraordinary dearth of worthy new plays had manifested itself and the quality of the great ma-jority of those offered was lamentable. Yet because New York was crowded to overflowing, largely with men and women in uniform, myriads of whom were clearly intent upon theater-going, adverse critical opinion had but little effect upon many a production which ordinarily could not have withstood its chilly reception at the hands of the reviewers. Precisely as in the case of foods, if the public could not get what it really wanted, it tried to like what it could get; and to damn a piece with faint praise, or no praise at all, by no

means spelt failure for it.

During the year the Theater Guild, whose recent record had not been so happy, was the recipient of Fortune's kindliest smiles, directed at two of its presentations, one in the spring, the other in the fall, the former a musical comedy, the latter a Shakespearean tragedy. Though entitled Oklahoma, the earlier was a musical version by Oscar Hammerstein 2nd and Richard Rodgers of Lynn Riggs' folk comedy, Green Grow the Li-lacs, a Guild offering of a dozen years back, whose locale was the old Indian Territory at the turn of the century. Inasmuch as the original name of the piece was also that of an interpolated song it was not surprising that the Riggs theme should lend itself so admirably to this sort of revision. Couched in the Plains dialect, with a sane, romantic plot, uncommonly charming airs and lyrics, agreeable comedy features, and a novel ballet introduced with the definite object of illuminating the story, all acted, sung, and danced by a cast selected for ability and appropriateness rather than on the basis of past performances, Oklahoma slipped promptly and justly into the position of the year's most sought-after theatrical production. Prominently included among its players were Alfred Drake, Joan Roberts, Betty Carde, Howard da Silva, Celeste Holm, Joseph Buloff, Lee Dixon, and Ralph Riggs. The ballet feature was the creation of Agnes de Mille. Then, in mid-October, the Guild brought forth Shakespeare's Othello as staged by Margaret Webster and tested in a couple of the more ambitious summer theaters in the preceding year, with Paul Robeson, the distinguished Negro actor and singer, portraying the Moor of Venice and with Jose Ferrer figuring as the Iago, Uta Hagen as Desdemona, and Miss Webster herself playing Emilia. In an arrangement of the text designed to clarify the sometimes vague motivation of the tragedy, Othello took rank, perhaps for the first time in the history of the American stage, as an offering tremendously in demand.

Competing with these Guild products in both popularity and critical esteem was Harriet, an epi-

sodic biographical drama by Florence Ryerson and Colin Clements depicting the most active portion of the career of Harriet Beecher Stowe, that doughty humanitarian crusader for the abolitionist cause, starting from her marriage down to the time in 1861 when, as the famous author of Uncle Tom's Cabin, she was hailed by President Lincoln as "the little woman who made this great war." In the title role Helen Hayes contributed one more of her realistic and captivating portraits of noted women of history. Rhys Williams had the part of her husband, and Sydney Smith as Henry Ward Beecher was only one of many who figured interestingly and often amusingly as Harriet's numerous relatives. Another notable biographical and historical work was Sidney Kings-ley's *The Patriots*, concerned primarily with the early political life of Thomas Jefferson, and presented very appropriately in the year of the Jefferson Bicentennial, at a moment when some of the chief Jeffersonian principles were once more at stake. Inevitably this drama involved also such other great personages as Washington, Madison, Monroe, and Alexander Hamilton, whose honest opposition to Jefferson's most cherished theories supplied the gist of the plot. Raymond Edward Johnson appeared with credit and dignity as Jefferson, House Jameson was a fiery Hamilton, John Souther and Judson Laire were respectively Madison and Monroe, while Madge Evans played the principal feminine part of Mr. Jefferson's daughter, Patsy.

Other creditable and popular presentations during the winter and spring were Dark Eyes, an amusing comedy about the invasion of a Long Island country estate by three needy Russian actresses, written as well as acted by two of them, Elena Miramova and Eugenie Leontovich, who virtually portrayed themselves; Kiss and Tell, by F. Hugh Herbert, likewise a comedy, concerned largely with the rising generation in a situation which would have had difficulty in passing the censor a few years back; an arresting and at times truly moving drama on the regeneration of a 12-year-old Nazi orphan, already steeped in the tenets of the Nazi philosophy, when he is expatriated to the home and care of his American uncle—Tomorrow the World, by James Gow and Arnoud d'Usseau, with Ralph Bellamy, Shirley Booth, and two amazingly competent child actors, Skippy Homeier and Joyce Van Patten, in its chief roles; and Three's a Family, by Phoebe and Henry Ephron, the first, the most hilarious, and the only unobjectionable and successful one of a series of comedies on the delicate topic of wartime's skyrocketing birth rate, with Robert Burton, Ruth Weston, and particularly Ethel Owen and William Wadsworth appearing to excellent comic advantage. Less fortunate but still worthy were Janet and Philip Stevenson's Counterattack, a war drama adapted from a Russian source, This Rock, by Walter Livingstone Faust, for the principal part in which Billie Burke returned to the speaking stage, and a London importation, Mary Hayley Bell's Men In Shadow, dealing with occupied France. The musicals, aside from Oklahoma, which was in a class by itself, were the Herbert and Dorothy Fields-Cole Porter Something for the Boys, which, cut to the measure of its star, Ethel Merman, was the first new offering of the year and was still cur-rent at its close, and another incarnation of the Ziegfeld Follies, produced some three months later and likewise still running at the year's end.

During the summer the rural and suburban playhouses throughout the country functioned and prospered, as in 1942, only in proportion to their accessibility by other means than private automobiles and, in general, on a considerably less experimental basis than usual, depending chiefly on stock presentations of recent hits. Meanwhile, in New York, the dearth of new material, more and more manifest as the new season came to life, was being evidenced by a series of revivals of such past musical successes as The Student Prince, The Vagabond King, Blossom Time, and The Merry Widow, of which the last, with Marta Eggerth and Jan Kiepura, both from the Metropolitan Opera Company, in its chief roles, was numbered among the major triumphs. Enduring favor was also accorded to another musical item entitled Early To Bed.

Heeding the warning inherent in the scant patronage that had fallen to the lot of most of the recent plays dealing with the war, the producers turned their attention to what was termed "escapist" drama, with the result indicated early in this record. One war item, however, did meet a cordial welcome in the early season, a program of five oneact sketches not only written but also acted by members of the armed forces, and presented under the collective title of *The Army Play by Play* in the interests of the Army Emergency Relief Fund. But another, *The Land of Fame*, by Albert and Mary Bein, concerned with the Nazi invasion and occupation of Greece, proved a swift casualty. No one else used any phase of the war for a basic topic until late November when Moss Hart's elaborate and inspiring spectacle, Winged Victory, made its appearance and instantly took a top position among critically approved as well as popular attractions. In this work Mr. Hart did for the Air Forces even more than Irving Berlin had previously done for the U.S. Army with his "soldier show," This Is the Army. He depicted in a succession of 17 scenes, some amusing, some moving and even thrilling, all vivid, the progress of a group of average American boys from a wide range of locali-ties and various types of homes, through their induction, training, and incidental experiences to the finished product, skilled, courageous fliers engaged in mortal combat with the enemy among the islands of the Pacific—a well-deserved glorification of that branch of the Service. Here again the multitudinous parts were splendidly played by the men—and women, too—of the armed forces, for the benefit of the Relief Fund.

Another object of high approval was One Touch of Venus, a musical comedy by the humorists, S. J. Perelman and Ogden Nash, suggested by a story of F. Anstey's, with tuneful airs by Kurt Weill, an entertaining modernization of the ancient Pygmalion theme. For the leading roles the producer raided the screen and radio industries and captured the engaging Mary Martin, John Boles, and Kenny Baker, with droll Paula Laurence, Teddy Hart, and a dancer named Sono Osato likewise contributing to the merriment. Notable among the dramas that met with marked success despite the handicap of unenthusiastic critical receptions was a recent London melodramatic success, The Two Mrs. Carrolls by Martin Vale, gripping though lacking in subtlety, and distinguished in its American presentation by the uncommonly resourceful performance of Elisabeth Bergner, with Victor Jory playing opposite. In the same category was Frederick Lonsdale's first new comedy in several years, Another Love Story, a misnomer to the extent that its plot involved a multiplicity of uninspired romances detailed with something less than the author's most scintillating skill. Roland Young and Margaret Lindsay were its featured players.

Elmer Rice's A New Life, the only serious contribution to the dramatic discussion of childbirth, was rather less fortunate, notwithstanding a competent portrayal by Betty Field of a young wife experiencing maternity. Although various attempts were made to foster the revived interest in vaude-ville, or at least variety shows, that had been in evidence for a year or two, the only one to achieve even moderate success was Laugh Time, wherein Frank Fay, Bertewheeler, and Ethel Waters were headliners.

Rose Franken, author of the very successful Claudia of a couple of seasons back, came forth with a new play, Outrageous Fortune, of a mildly mystic nature, which achieved, among other agreeable feats, that of luring Elsie Ferguson back to the stage to head one of the season's more distinguished casts, including also Maria Ouspenskaya, Frederic Tozere, Margalo Gillmore, Adele Long-mire, Margaret Hamilton, and Brent Sargent. Later, as the year was about to end, she became one of the rare playwrights to have two dramas simultaneously current in New York when her Doctors Disagree was also presented, a piece concerned with women surgeons. The Theater Guild meanwhile had offered a third attraction in The Innocent Voyage, a dramatization by Paul Osborn from Richard Hughes' novel, A High Wind in Jamaica, which enjoyed but a limited run under the handicap of rather intricate scenery representing no fewer than three different ships and the presence in its cast of nearly as many children as adults. It did, however, serve the excellent purpose of acquainting New York playgoers with the work of the Austrian actor, Oscar Homolka, who figured engagingly in the central role of a pirate captain, while Herbert Berghof and a very young and highly promising actress, Abby Bonime, likewise conducted themselves with conspicuous credit.

The prevalent conditions that were by now conferring financial success indiscriminately upon first-rate and second-rate offerings were largely responsible for the substantial run of the musical What's Up, in which Jimmy Savo was the bright particular comic, but the time was clearly ripe for a revival, or, more correctly, a rejuvenation, of A Connecticut Yankee, the lyric version of Mark Twain's elaborate yarn that Rodgers and Hart first put together for stage purposes in 1927. In its upto-date form the best of the original songs were retained, while others were replaced by new ones, the last work of Lorenz Hart before his untimely death. Dick Foran, Vivienne Segal, Julie Warren, Robert Chisholm, Jere McMahon, and one Vera-Ellen, a captivating danseuse, contributed abundantly to the gaiety of this resurrection.

Even Katharine Cornell was unable to find a new play measuring up to her standard or her talents, but, as a makeshift, presented Lovers and Friends, a comparatively unimportant work on a commonplace theme by the English Dodie Smith, and dignified it by the resourceful acting of herself and her company, which included Raymond Massey, Henry Daniell, and Carol Goodner. Oscar Hammerstein 2nd, the librettist, accomplished a truly notable feat by transplanting the well-loved opera of Carmen, plot, spirit, tempo, and setting, from Spain to somewhere in the sunny South of the United States, bringing it up to the moment, under the title of Carmen Jones, yet leaving the Bizet music virtually intact without additions or very many subtractions, and having it both sung and acted with amazingly agreeable effect by a cast composed entirely of Negroes. And the wan-

ing year still had one further blessing to confer in John van Druten's The Voice of the Turtle, a slight little comedy yet one of the daintiest and most endearing to put in an appearance in recent history, with a cast of three—Margaret Sullavan, Elliott Nugent, and Audrey Christie—playing exquisitely in perfect unison. What followed this as the year faded out was merely anticlimactic: Listen, Professorl, a posthumous adaptation of a work by the young Russian playwright, Alexander Afinogenov, a victim of the war in Moscow, featuring Dudley Digges in a grandfather role.

Abroad, London, enjoying a welcome respite from air raids, enjoyed likewise a theater boom throughout the year, though largely under condi-tions to some extent comparable with those in New York which spelt patronage for many an inferior attraction. The British, however, and their guests were seemingly content with the long-run pieces continuing over from 1942 and with numerous revivals of others of proven popularity. Nevertheless, a number of the best-known playwrights contributed new dramas and several were imported from the United States. Noel Coward varied the usual procedure by producing two at the same time and having them acted alternately by the same cast, which he himself headed. Respectively entitled *Present Laughter* and *This Happy Breed*, they were hailed as his most mature and consequential work to date. J. B. Priestley was represented by a new speculative play, They Came to a City, strong in character delineation though deficient in action and regarded as probably the most important new item written for the theater since the war started. Its notable cast included John Clements, A. E. Matthews, and Mabel Terry-Lewis. James Bridie was reputed to have outdone himself with Mr. Bolfry, an ingenious and witty demonstration of the conflict between the forces of good and evil. From America meanwhile had come Junior Miss, which met with moderate success, and the stage version of John Steinbeck's novel, The Moon Is Down, which gave promise of surpassing its record on the home front.

London saw also a realistic drama on the topic of juvenile crime based on Graham Greene's novel, Brighton Rock, wherein chief honors went to Hermione Baddeley for her rendering of a comedy part; also Lottie Dundass, the first play by the novelist, Enid Bagnold, with Ann Todd acquitting herself creditably in the title role, that of a young actress so certain of her own inherent genius that she even commits a murder in order to demonstrate it; an interesting, albeit unsuccessful, new work by the notable young actor-dramatist, Peter Ustinov, aged 20, entitled Blow Your Own Trumpet; Roland Pertwee's Pink String and Sealing Wax, a melodramatic Victorian character study; and Dark River, by Rodney Ackland, which brought Peggy Ashcroft back to the London stage after an extended absence besides stirring up a clash of opinion regarding its merits. There was, in addition, a fairly tedious dramatic version of Tolstoi's massive War and Peace, while further cordially welcomed visitors from America included the lurid musical, Panama Hattie, presented with an almost completely British cast, Irving Berlin's military melange, This Is the Army, with the author-producer himself acting in the play, Maxwell Anderson's The Eve of St. Mark, and, finally, Robert E. Sherwood's There Shall Be No Night in revised form with its setting and its application transferred for obvious reasons from Finland to equally heroic Greece. For this event Alfred Lunt and Lynn Fontanne crossed the Atlantic to assume their original characterizations. As the year ended, J. B. Priestley contributed one more impressive item related to the war, *Desert Highway*, wherein, by his own route, he arrived at much the same conclusion, as affecting the British, that Mr. Sherwood had already attributed, respectively, to Finns and Greeks.

In Paris, as in other Nazi-occupied centers, with all incentive for new work or originality strangled (see French Literature), activity in the theater was negligible, while Berlin, for extended periods under more or less constant bombardment from the air, discovered what it meant to be left without time, thought, or inclination for the drama. In Russia, to a large degree, plays were produced primarily for the entertainment of the fighting men, and taken to them at the battle fronts when opportunity permitted. One new work, The Deathless, by Alexei Arbugov and Alexander Gladiov, dealing unpretentiously and humanly with earlier phases of the German invasion, contained one character, a Yankee reporter who espouses the Russian cause, so well liked that the piece was accepted as adding materially to the friendliness of Soviet-American relations. See the articles on Literature.

THURINGIA. See GERMANY under Area and Population.

TIBET. A dependency of China in central Asia. Area, 463,000 square miles; population variously estimated at from 700,000 to 6,000,000. Capital, Lhasa, 50,000 inhabitants. Lamaism, a development of Mahayana Buddhism, is the religion of the people. Chief occupations: agriculture, stock raising, wool spinning, and knitting. The principal minerals are gold, borax, and salt. There is a factory for the manufacture of army equipment, uniforms, coins, and paper money. Trade is carried on with China and India.

Civil and religious authority is vested in the Dalai Lama, acting through a prime minister appointed from among the principal Tibetan lamas. The latter is assisted by a grand council of four members. The 14th Dalai Lama is a Chinese peasant boy selected in 1939 as the reincarnation of the 13th Dalai Lama who died in 1933. Enthroned Feb. 22, 1940 (see Year Book for 1940), he took the name of Jampel Ngawang Lobsang Yishey Tenzing Gyatso. During his minority, supreme power remains in the hands of the regent who assumed control upon the death of the 13th Dalai Lama.

History. After many months of negotiation with Chinese and British authorities, the Tibetan Government in May, 1943, departed from its traditional closed-door policy to the extent of agreeing to permit the transportation of nonmilitary supplies from India to China across Tibet. Under the agreement, the goods were to be carried by Tibetan transport contractors under the supervision of the Tibetan Government. The quantity of goods car-

ried was limited by the fact that pack animals offered the only means of transport and that both caravan routes to China—from Kalimpong in northern Bengal and Gangtok in Sikkim State averaged some 12,000 feet in altitude.

## TILE. See Building Materials.

TIMOR, Portuguese. A Portuguese possession (occupied by the Japanese during February, 1942) in the Malay Archipelago, comprising the eastern part of the island of Timor together with the territory of Ambeno and islands of Pulo Cambing and Pulo Nov. 8, 1943). Public debt (Dec. 31, 1941), 31,-279,164 escudos.

Portuguese Timor remained a zone of military operations throughout 1943. Japanese naval and air bases on the island were repeatedly attacked by Allied bombers of Gen. Douglas MacArthur's

Southwestern Pacific command.

TIN. Continued severe restrictions upon use, imports from Bolivia and Belgian Congo, and reclamation of tin can coatings combined to provide American industry with a lean but sustaining diet of tin dur-

ing 1943.

At the end of the year tin was listed as the third most critical of essential metals by the War Production Board. With 70 per cent of prewar production sources still in enemy hands, there was little immediate hope that consumption on the vast prewar scale could be resumed, however. Production of tinplate from which "tin cans" are made, was scheduled for approximately the same level in 1944 as in 1943, when output was approximately 2,500,000 tons.

The electrolytic process for tinplating steel for food containers was used for less than 15 per cent of 1943 tinplate output. Distribution of shipments from timplate mills during the first six months of 1943 was approximately as follows: hot dipped tinplate, 19,750,000 base boxes; electrolytic tinplate, 2,600,000 base boxes; black plate, 1,715,000 base boxes; pretreated or chemically bonded black plate, 1,005,000 base boxes; ternes, 1,330,000 base boxes; total, 26,400,000 base boxes. (In order to convert to tonnage, base boxes may be divided by 21.) Production for the final six months of the year continued on a slightly reduced scale.

The \$6,300,000 Longhorn tin smelter, erected with government funds at Texas City, Tex., in order to smelt Bolivian ores for United States consumption, and for British needs in case Liverpool were bombed, did not reach capacity operation. The Liverpool smelters continued in operation, making full use of the Texas smelter unnecessary, although it could have produced more than 50,000

long tons of refined tin annually.

Production of the Belgian Congo, which is very substantial, is shipped to the United States. This production supposedly was larger in 1943 than in previous years. Some tin is refined in the Congo at Elizabethville. Nigerian production, also believed to have increased, is shipped directly to England, to have increased in the United Metians course. thus affording another United Nations source.

Tin cans were collected on so large a scale from American homes, restaurants, and institutions, as to become almost an American tradition. While the total amount of tin recovered from these cans by detinning plants was not large compared to overall requirements, the tin recovered is 99.85 to 99.95 per cent pure and is available for war uses. Some tin cans collected were routed to shredding plants to be prepared for shipment to the copper industry which uses them for precipitating copper bearing

Rumors that tin had been shipped from Japanese wartime possessions to the United States by way of Russia were denied in their entirety by responsible government officials. It was pointed out that the Metals Reserve Co. is the sole agency empowered to buy abroad for this country and that their records showed no such transaction.

Projects to mine and mill veinlet deposits of tin ore near Riverside, Calif., and Cima, Calif., failed

to produce more than minute amounts.

It is estimated that brass and bronze exceeded tinplate in 1943 as the leading tin use, taking approximately 35 per cent of the total consumed. Tinplate, it is believed, accounted for about 30 per cent, babbitt 9 per cent, and solder 16 per cent, with the remainder distributed among minor uses. See LABOR CONDITIONS under Labor Movements; WAR PRODUCTION BOARD under Salvage. CHARLES T. POST.

INT. See CHEMISTRY under Explosives.

TOBACCO. The production of all types of tobacco in the United States in 1943 was estimated by the U.S. Department of Agriculture at 1,403,275,000 lb. compared with the 1,408,717,000 lb. in 1942 and the 1932-41 average of 1,349,896,000 lb. The harvested crop totaled 1,461,800 acres compared with 1,377,200 acres in 1942, while the 1943 average vield average of 1,249,896,000 lb. The age yield per acre was 960 lb., compared with 1,023 lb. in 1942. The season average price received by farmers in 1942 was 36.9¢ per pound and the value of production was \$519,478,000.

The accompanying table lists the leading to-bacco States for 1948. See STATE LEGISLATION under Taxation and Finance.

| State | Value         | $Acres \ Harvested$ | Production (lbs.) |
|-------|---------------|---------------------|-------------------|
| N.C   | \$222,300,000 | 587,600,000         | 553,680,000       |
| Ку    | 137,118,000   | 341,400,000         | 328,811,000       |
| Va    | 43,520,000    | 116,600,000         | 106,878,000       |
| S.C   | 33,999,000    | 92,000,000          | 87,400,000        |

The production by types in 1943 was estimated as follows: flue-cured 790,878,000 lb.; fire-cured 68,523,000 lb.; air-cured light—Burley 385,286,-000 lb. and Southern Maryland 17,604,000 lb.; air-cured dark 32,422,000 lb.; and cigar types 108,-312,000 lb.; including filler 47,645,000 lb.; binder 50,840,000 lb.; and wrapper 9,827,000 lb. The production of cigar tobacco is about 9 per cent less than for 1942, due to decreases of 11 per cent in the filler class and 9 per cent in the binder class.

Internal revenue taxes collected on tobacco products by the United States for the fiscal year ended June 30, 1943, as reported by the U.S. Bureau of Internal Revenue, totaled \$923,857,283, distributed as follows: large cigars \$23,075,077, small 641

cigars \$97,317, large cigarettes \$29,600, small cigarettes \$885,230,743, snuff of all descriptions \$7,543,283, and chewing and smoking tobacco \$47,849,119. In this connection was collected also \$1,472,325 on cigarette papers and tubes, \$3,566 as leaf dealer penalties, etc., and \$8,556,250 on cigarette and cigar floor tax.

10G0, French. The part of Togo mandated to France by the League of Nations. Area, 21,893 square miles. Population (1938), 780,497. Capital: Lomé (14,380 inhabitants). The main products are cocoa, palm oil, copra, coffee, and cotton. Trade (1939): imports 91,644,000 francs; exports 74,227,000 francs (franc averaged \$0.0251 in 1939). Budget (1939): 50,534,000 francs; in addition, the railway budget was 12,889,000 francs. Railways (1940): 242 miles. Shipping (1938): 386 ships cleared the ports of Lomé and Anecho.

rogoland. The area of Togo which was confirmed as a British mandate by the League of Nations and attached to the British Gold Coast for administraive purposes. Area, 13,041 square miles. Popula-tion (June 30, 1940), 391,473. The chief products are palm oil, cacao, kola nuts, coffee, and cotton. Statistics of trade and finance are included in the general totals for the Gold Coast. Administrator, the Governor of the Gold Coast.

rokelau (Union Islands). A group of islands (Faka-ofo, Nukunono, Atafu) in the Pacific (8° to 10° S. and 171° to 173° W.), formerly part of the Gilbert and Ellice Islands colony, transferred to the juris-diction of New Zoolony, transferred to the jurisdiction of New Zealand on Feb. 11, 1926. Area, 4 square miles. Estimated population (June, 1942), 1,364. There was a wireless station on each of the three islands. The government was under supervision of the administrator of Western Samoa.

IONGA (Friendly Islands). A native kingdom and British protectorate in the South Pacific, east of Fiji. It comprises 150 islands and islets forming three nain groups called respectively Tongatabu, Haapai, and Vavau, and includes the outlying islands of Niuafoou, Tafahi, and Niuatobutabu. Total area, about 250 square miles. Population in 1939, 34,130 (32,862 Tongans, 400 whites, 441 half-astes, and 427 others), of whom 15,754 inhabit Tongatabu. The natives are Christians. Capital, Nukualofa. Education (1940): 117 schools and 6,714 students; Tonga College had 196 students enrolled. A large United States task force arrived during the spring of 1942 and built an airbase on Tongatabu.

Copra, bananas, citrus fruits, breadfruit, taro, yams, and fish are the chief products. Trade (1940): imports &A76,360; exports &A62,275 (copra 7,316 tons valued at £A43,889 was the main export item). Finance (1940–41): £A60,-820; expenditure £A72,211 (official exchange rate for the £A during 1940 and 1941 was \$3.228). Queen Salote Tubou succeeded to the throne Apr. 12, 1918. The Legislative Assembly consists of 22 members (7 nobles elected by their peers, 7 representatives of the people, 7 members of the Cabinet, and the Speaker). Elections are held triential. nially. A British Agent, responsible to the British High Commissioner for the Western Pacific, is assigned to the Court.

U.S. naval forces landed in Tonga in the spring of 1942. With the cooperation of British and Tongan authorities, they constructed an air base and other installations for defense and counter-

offense against the Japanese.

TOTALITARIANISM. See ARGENTINA, GERMANY, JA-PAN, ITALY, SPAIN, and UNION OF SOVIET SOCIAL-IST REPUBLICS, under History.

TRACK AND FIELD ATHLETICS. When Gunder Haegg of Sweden broke seven world distance records in 1942 some track fans on this side of the Atlantic were inclined to doubt the quality of the stop watches being used abroad. But in 1943, Gunder the Wonder visited this country for a series of races and convinced even the Doubting Thomases that he deserved billing as the greatest middle dis-tance runner the world had ever seen.

After a hazardous tanker trip across the ocean the Swift Swede went on a cross-country tour that called for eight appearances. When the trip was over Gunder had won seven races, set three American records, and clearly earned rating as "athlete of the year." The only event he failed to win was a two-mile test in which the victor was allowed a handicap of 440 yards. Nevertheless, Gunder, finishing second, established a new mark for the

However, while Haegg was over here, his countryman, Ame Andersson, who could not make the trip, found running in Sweden even more pro-ductive. For while Gunder was making new friends here Arne was busy making new records over there. What's more, it was a pair of outdoor standards belonging to Haegg that Andersson shattered. Arne lowered the mile record from 4:04.6 to 4:02.6 and the 1,500-meter time from 3:45.8 to 3:45.

The feats of Andersson and Haegg added spice to a campaign that saw interest in the sport maintained at a high level. Of course Andersson's new records were most notable, but rated not far behind was the 8:51 timing in a two-mile indoor event at Cleveland by that greatest board-floor middle distance man of all time, little Greg Rice. The former Notre Dame champion was one of the many track and field stars who entered the armed services.

For sustained interest, however, nothing that happened in the sport all year compared with Haegg's American showings. The Flying Fireman made his United States debut at Randalls Island, where he easily defeated Rice in a 5,000-meter test that carried with it the National A.A.U. championship and ended a 65-race winning streak for Rice. Haegg's time of 14:48.5 was slow, but his flawless form at once became a topic of conversation for track experts.

After New York, Haegg went to Chicago and there led home Gil Dodds in 9:02.8 for two miles. Olympic Stadium in Los Angeles was Gunder's next stop and there he ran two miles in 8:53.8, fastest time for the distance ever fashioned out-doors in the United States. At San Francisco, Haegg switched to the mile and won in 4:12.3, then a week later at Boston he really went to town, reeling off a mile in 4:05.3, to set a new American outdoor standard. En route he was caught in 3:47.8 for 1,500 meters, also the fastest ever in this country. In the Boston race, Dodds covered the mile in 4:06.5 (also under Glenn Cunningham's American standard of 4:06.7) and Bill Hulse, former N.Y.U. star, was caught in 4:07.8.

The Baldwin-Wallace track at Berea, Ohio, was the scene of Haegg's next triumph, the visiting ace again conquering Hulse and Dodds in 4:05.4 as Hulse, surprising the track world, was timed in 4:06, a tenth of a second faster than Dodds.

Haegg then moved to Cincinnati and produced an 8:51.3 two miles, bettering his record achievement at Los Angeles. The tour's finale brought Haegg, Dodds, and Hulse back to Randalls Island in a one-mile classic that resulted in a thrilling 4:06.9 victory over Dodds and Hulse, the Swede overcoming an accidental brush by Dodds that almost toppled Gunder off the track. Haegg's tour brought in nearly \$150,000 for the Army Air Forces Aid Society.

Haegg's visit and the participation of service men in most of the meets helped maintain interest in the sport. All the big competitions were held and despite a paucity of world records the year did produce Cornelius Warmerdam's greatest pole vault, a leap indoors of 15 feet 8½ inches, Rice's 8:51 mark for two miles indoors, and a number of assorted marks. The national indoor mile laurels were won by Frank Dixon while Dodds took the outdoor crown at 1,500 meters. Rice, of course, kept his two-mile title. The sprinting of Harold Davis and Harvey Kelsey, Bill Cummins's hurdling, and Cliff Bourland's unbeaten 440 racing were other highlights.

New York University swept the I.C.4-A meets, indoors and out, and took the National A.A.U. indoors championship to become the first college team to ever gain that crown. The New York A.C. retained the A.A.U. outdoor title. Southern California won the N.C.A.A. outdoor games for the ninth straight time and Michigan captured the Big Ten outdoor and indoor honors.

The Polish Olympic Women's A.C. of Cleveland annexed the women's national championship as the versatile Stella Walsh won two sprints and the broad jump to pace her team in victory.

THOMAS V. HANEY.

TRADE, Foreign. Preliminary returns for United States foreign trade during the calendar year 1943 showed record-breaking exports and a high level of imports. Including lend-lease shipments, exports were valued at \$12,716,902,000, a figure 58 per cent higher than in 1942, 143 per cent higher than in

a Including reexports. Partly estimated.

1929, and 54 per cent above the previous peak year of 1920. Imports, totaling \$3,364,809,000, were the highest in any year since 1929.

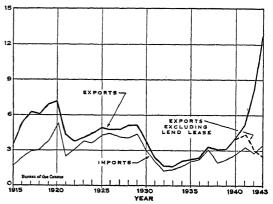

As indicated in Table I, U.S. exports other than lend-lease shipments sustained a sharp setback in 1942 coincident with the tremendous expansion of lend-lease trade. Cash exports totaled \$4,406,151,000 during the last ten months of 1941 but dropped to \$2,179,042,000 in the first ten months of 1943. At the end of 1943, they were running at about the same rate as in the years 1934-36 inclusive. On the other hand, lend-lease shipments were about 80 per cent of all U.S. exports by the fall of 1943, as compared with less than 1 per cent in March, 1941, the first month the Lend-Lease Act became operative. Lend-lease goods accounted for 78 per cent of all U.S. exports during the first ten months of 1943.

General imports in 1943 amounted to \$3,364,809,000, the highest total since 1929. They were 23 per cent greater than for 1942 and 51 per cent above the annual average imports for the decade 1932–41. However the 1943 imports were 36 per cent below the \$5,278,481,000 total registered for 1920. The value of general imports for the full year 1943 substantially increased compared with preceding years, but the December total of \$274,256,000 was the smallest since April and was 16 per cent less than the peak 1943 monthly import total of October. See Table II.

II. U.S. IMPORTS: 1942 AND 1943 (In thousands of dollars, adjusted to nearest thousands)

| Month     | General    | imports<br>ivals) | Imports for consumption |            |  |
|-----------|------------|-------------------|-------------------------|------------|--|
| TIT OLDGE | 1942       | 1943              |                         | 1943       |  |

| August    | 186,333    | 315,336           | 184,820                 | 305,714    |  |
| September | 196,061    | 284,936           | 196,785                 | 283,775    |  |
| October   | 199,694    | 328,572           | 223,409                 | 316,711    |  |
| November  | 168,037    | 316,532           | 186,942                 | 301,427    |  |
| December  | 358,301    | 274,256           | 407,144                 | 271,047    |  |
| Total     | 2,742,014  | 3,364,809         | 2,766,425               | 3,367,573  |  |

The net merchandise export balance for December, 1943, amounted to \$974,333,000. This brought the net export balance for the year to a new high of \$9,352,093,000, or 77 per cent above the previous peak of \$5,293,402,000 in 1942. Due to the wartime rise in prices, the figures showing the value of trade do not accurately reflect changes in the physical volume of trade.

<sup>&</sup>lt;sup>a</sup> Includes Lend-Lease shipments but excludes shipments to U.S. armed forces abroad. <sup>b</sup> Includes Eire. <sup>c</sup> Includes Newfoundland, Labrador, St. Pierre and Miquelon, Greenland, and Iceland. <sup>d</sup> Includes islands in the Mediterranean.

As indicated in Table III, the geographical distribution of U.S. exports and imports changed materially in 1942 as compared with 1941. (Comparative statistics for 1943 were not available in time for inclusion in this article.) The customary heavy shipments of consumer goods dropped off sharply in many lines in 1942 as production was curtailed and plants shifted to war orders. However cash exports of such essential products as coal, steel, industrial machinery, petroleum products, chemicals, paper, textiles, foodstuffs, and also strictly military equipment continued on a large scale.

The export trade in 1942 tended increasingly to concentrate upon British Empire countries and the American republics, in line with the trend since the outbreak of war in 1939. Lend-lease shipments accounted for a growing proportion of total U.S. shipments to the United Kingdom while cash sales to Canada increased. About one-fifth of the cash exports to Canada represented military items purchased outright. The Latin American republics and the European colonies in that area received about 25 per cent of the total cash exports of the United States in 1942, compared with 18 per cent in 1936–38 and 20 per cent in 1939–41. However cash exports to Latin America in 1942 were 23 per cent less in value than in 1941.

During the first nine months of 1943, general imports of merchandise into the United States from the 20 Latin American republics exceeded total exports to them by \$371,000,000. The net U.S. import balance for the same period of 1942 was \$221,000,000. The most significant import balances for the January-September, 1943, period were noted in U.S. trade with Cuba, Chile, Argentina, Brazil, Colombia, and Uruguay. U.S. exports to Panama and Venezuela exceeded imports from those countries during the same period.

TRANS-JORDAN. An Arab territory in Asia Minor, bounded by Syria, Iraq, Saudi Arabia, and Palestine. With Palestine, it was mandated to Great Britain by the League of Nations, Sept. 29, 1923. Area, 34,740 square miles. Estimated population, about 300,000 (260,000 Arab Moslems, 30,000 Arab Christians, 10,000 Circassians and others). Chief towns: Amman (capital), Es-Salt. Arabic is the official language. Education (1938–39): 191 schools and 13,854 pupils.

schools and 13,854 pupils.

Defense. The defense force in 1941 included Royal Air Force units based at Amman and Maán; the Trans-Jordan Frontier Force of 700 natives with British officers; and an Arab Legion of 47 officers and 1,577 men, led by Col. John B. Glubb, an Englishman. Local Arab tribal levies were available in time of emergency.

Production, etc. East of the Hejaz Railway the country is largely desert, but fertile land suitable for agriculture lies to the west. Stock raising and primitive agriculture are the principal occupations. Record crops of 200,000 tons of wheat and 100,000 tons of barley were reported for 1942. Some tobacco is grown. Phosphate deposits have been developed and potash is recovered from the Dead Sea. The country's limited trade is mainly with Palestine and Iraq. Roads (1938): 1,250 miles. The Hejaz Railway, running south from Damascus across Trans-Jordan, was open to traffic only as far as Maán in 1941. British reports indicated that in

1942 a military railway was under construction from Maán to the port of Aqaba on the Red Sea. Air lines from Cairo, Egypt, and Lydda, Palestine, to Baghdad cross Trans-Jordan. Finance (1939–40): £P513,971, including a grant-in-aid from the British Government; expenditure £P510,293; public debt (Dec. 31, 1939) £P155,107 (£P was worth \$4.035 in 1939 and 1940).

Government. Conquered from the Ottoman Empire by the British in World War I, Trans-Jordan was placed under the rule of the Hashimite prince, Emir Abdullah ibn Hussein in April, 1921. He is assisted by a Council of Ministers, established Aug. 6, 1939. There is a Legislative Assembly of 16 elected and 6 ex-officio members. A treaty recognizing Trans-Jordan's right to an independent government but placing it under British protection was signed Feb. 20, 1928. The British High Commissioner for Palestine is also High Commissioner for Trans-Jordan. He is represented at Amman by a British Resident (A. S. Kirkbride, app. Feb. 16, 1939).

History. Emir Abdullah lent his active support to the movement for federation of the Arab states during 1943. He offered his services as ruler of the proposed federation, and in September sent his Fremier, Tewfik el Hada, to Cairo to discuss federation with the Egyptian Premier. See Egypt under History.

TREASURY, U.S. Department of the A Department of the U.S. Government which was composed in 1943 of the following principal branches.

Bureau of the Comptroller of the Currency
Bureau of Customs
Bureau of Engraving and Printing
Bureau of Internal Revenue
Bureau of Internal Revenue
Bureau of Narcotics (see Narcotic Drugs Control)
Committee on Practice
Division of Parcotice
Division of Personnel
Division of Personnel
Division of Tax Research
Legal Division
Office of the Chief Clerk
Fiscal Service
War Savings Staff
Foreign Funds Control
Office of Superintendent of Treasury Buildings
Procurement Division
Secret Service

The Secretary of the Treasury in 1943 was Henry W. Morgenthau, Jr. See the separate listing of important bureaus; Banks and Banking; Financial Review; Public Finance; Taxation.

TREASURY (MONO) ISLANDS. See BRITISH SOLOMON ISLANDS; WORLD WAR under The War in the Pacific.

TRENGGANU. See British Malaya; Thailand.

TRINIDAD AND TOBAGO. A united British colony near the coast of Venezuela, comprising the islands of Trinidad (1,862 sq. mi.), Tobago (116 sq. mi.), and adjacent islands. Total area, 1,980 square miles. Total population (Jan. 1, 1942), 506,316. Most of the inhabitants are West Indian natives of African descent. The white population comprises English, French, Spanish, and Portuguese. In addition, there are East Indians (estimated at 170,396), and a few Chinese. Vital statistics

(1941): 16,494 births, 7,906 deaths, and 3,563 marriages. Chief towns: (of Trinidad) Port of Spain (capital), 97,531 inhabitants, San Fernando 28,652, Arima 16,000, Princes Town 5,580; (of Tobago) Scarborough 1,515, Roxborough, Plymouth. Education (1941): 292 primary and secondary schools. Queens Royal College provides higher education.

U.S. Bases. Defense bases were leased to the United States in 1941 for a period of 99 years, under the authority of United States Bases Agreement concluded between the Governments of the United Kingdom and the United States of America, and the Trinidad-United States Bases Lease of Apr. 22, 1941 (see 1942 Year Book, p. 662,

col. 2, for the location of these bases).

Production and Trade. Principal products: petroleum (2,988,000 metric tons, 1941), asphalt, cocoa (5,000 tons, 1941–42), sugar (65,000 tons, 1943), rum, molasses, rice, coconuts, coffee, timber, grapefruit, and bananas. There are deposits of coal, iron, graphite, gold, and gypsum. Natural asphalt is obtained from the pitch lake at La Brea. Trade (1941): imports were valued at \$57,485,563; exports \$47,295,874 (sugar, asphalt, and cocoa are the chief export products).

Communications. In 1942 there were 1,849 miles of roads, 123 miles of government railway, 118 miles of telegraph line, and 22,040 miles of telephone line. There are three government wireless stations, and cable communications with North America, Great Britain, and other parts of the world. Air services were in operation to and from the United States, South America, Europe, and the West Indies. During 1943 a regular weekly air service from Trinidad to Grenada was inaugurated.

Finance. Revenue for 1943 was estimated at almost \$21,000,000 (\$22,000,000 in 1942) and expenditure at slightly less. Public debt, Dec. 31,

1941, \$22,574,040.

Government. The colony is governed under a reformed constitution which went into effect in 1941. A governor, assisted by an executive council, heads the administration. As now constituted the legislative council consists of the Governor as president (with a casting vote in case of a tie), 3 official members, and 15 unofficial members (6 nominated by the Governor and 9 elected by the voters). Governor, Capt. Sir Bede Clifford (app. Mar. 25, 1942).

History. The President of the United States made a short stop in Trinidad at the end of January, 1943, during his flight north from Brazil, and inspected United States army and naval installations on the island.

TRUK. The chief naval base of Japan in the west central Pacific, comprising a cluster of islands (151° 22′ E. and 6° 57′ N.) in a lagoon surrounded by coral reefs (32 miles across from east to west), in the eastern Caroline group of the mandated Japanese Pacific Islands (q.v.). Area, 51 square miles. Civil population (1938), 17,133. There are 245 islands in all, the chief being Dublon (3 miles long), Fefan, Moen, Tol, Udot, and Uman. The islands, of volcanic and coral formation, are for the

most part high, and offer good protection and safe anchorages for ships. Only four (North, Northeast, Otta, and Piaanu) of the 20 passes through the reefs are navigable.

TUAMOTU ISLANDS. See French Oceania. TUBERCULOSIS CONTROL. See Public Health Serv-

TUNGSTEN. Mounting domestic and Western hemisphere production and continued severe War Production Board restrictions upon use combined in 1943 to take tungsten out of the shortage classification in which it had remained during the first year of the war.

The Yellow Pine mine in the wilderness of central Idaho, operated by the Bradley Mining Co., fulfilled the hope that it would become the richest and greatest scheelite (CaWO4) deposit ever known, and undoubtedly accounted for more than one-third of domestic production. This mine also was the country's largest producer of antimony, the metal for which it was being developed when core drilling conducted by the U.S. Bureau of Mines and the U.S. Geological Survey (qq.v.) revealed the presence of tungsten ore. Continued successful application by the Nevada-Massachusetts Co. of its concentration process, which had reached maturity in 1941 and 1942, enabled it to produce substantially from northern Nevada ores. United States Vanadium Corp., which in 1941 had solved the problem of extracting tungsten from a large low-grade deposit of refractory ore occurring high in the Sierra-Nevada mountains of California, continued large-scale production from this deposit. This company also com-pleted and commenced operation as agents of Metals Reserve Co. of a chemical treatment plant at Salt Lake City, Utah, to produce high grade concentrates. Low grade scheelite deposits in northern Nevada were the source of considerable tonnages milled by Getchell Mines, Inc. Many smaller deposits, principally in the southern Sierra-Nevada mountains of California, in Nevada, and individual mines in western Árizona, southern Idaho, Utah, and Colorado, together rounded out most of the balance of domestic production.

Many smaller mines of immediately preceding years, a result of prospecting encouraged by the high price for tungsten at the beginning of the war and the hope that tungsten would shoot up to \$40 or \$60 per short ton unit as in the last war, were abandoned in the face of high operating costs and a stabilized price structure. The ultraviolet lamp, under which tungsten reveals its presence by a fluorescent glow, continued an inval-uable aid to prospecting. In view of the limited reserves of labor and equipment available, the Federal government discouraged development of deposits analyzing less than 0.5 per cent WO<sub>8</sub> unless the ore could be mined and milled at unusu-

ally low cost.

No production statistics are available because of the war, but it may be assumed that American requirements were met approximately one-half from domestic mines, and one-half by imports from Bolivia, Peru, Canada, Argentina, Mexico. World output of WO<sub>3</sub> rose from 46,000,000 lb. (1938) to

slightly under 70,000,000 lb. (est., 1943).

Most producers operated in 1943 under the Metals Reserve Co., Federal ore-buying agency, contracts calling for paying of \$24 per short ton unit f.o.b. shipping point. Qualified new producers were eligible to sell to Metals Reserve Co. at \$30 per short ton unit

\$30 per short ton unit.

War consumption of tungsten involves its use in armor-piercing projectile tips, and, indirectly, as an alloy for high speed steels and tungsten carbide cutting tools. Popularly, it continues to be best known as the material from which electric light globe filaments are made. In 1942, the War Production Board cut the proportion of tungsten used in making certain alloy steels, substituting molybdenum, then relatively plentiful. In 1943, the relative scarcity of the two alloying elements was reversed, and former ratios were resumed.

See GEOLOGICAL SURVEY.

CHARLES T. POST.

TUNISIA. A French protectorate in North Africa. Capital, Tunis. With an area of 48,332 square miles, Tunisia had a population of 2,608,313 at the 1936 census, including 2,335,623 Arabs and Bedouins, 59,485 native Jews, 108,068 French citizens, 94,289 Italians, and 7,279 Maltese. The estimated civilian population on Jan. 1, 1940, was 2,730,000. Italian census figures published July 22, 1940, placed the number of Italians in Tunisia at 125,000. The 1936 census populations of the chief towns were: Tunis, 219,578; Sfax, 43,333; Sousse, 28,465; Bizerte, 25,872; Kairouan, 22,991. Moslems comprise 89.5 per cent of the total population. The school attendance on Dec. 31, 1937, was 96,520.

Production. The chief occupations are agriculture, stock raising, fishing, and mining. Yields of the chief crops in 1941 were (in metric tons): Wheat, 400,000; barley, 200,000; oats, 30,000 in 1939; olive oil, 27,000 in 1940-41 (not including oil extracted from residues). Wine production in 1939 was 988,000 hectoliters (hectoliter equals 26.42 U.S. gal.); cork (1940), 6,374 metric tons; wool (1938), 3,700 metric tons. Approximate output of the chief minerals was (in metric tons): Phosphate rock, 1,608,000 in 1939; iron ore, 800,000 in 1940; zinc, 6,000 in 1940; lead, 24,000 in 1940; mercury, 10 in 1940. The principal native manufactures are woolen goods, carpets, leather goods, and pottery.

Foreign Trade, etc. Trade was mainly with France until disrupted by the Allied landings in French North Africa in November, 1942. Wheat, olive oil, phosphates, and wine normally account for half the total exports. Budget estimates for 1940: Receipts, 811,198,000 francs; expenditures, 810,954,-334. Transportation facilities in 1941 included 1,310 miles of railways, 7,887 miles of highways.

Government. Tunisia is a regency under the control of the French Foreign Office, which acts through a Resident General with headquarters in Tunis. There is normally a Ministry of 11 departments (8 French and 3 Tunisians); the Resident General holds the portfolio of Foreign Affairs. The nominal ruler (bey) is head of the reigning family, which has occupied the throne since 1705. Sidi Mohammed al Mounsaf (Moncef), who inherited the throne June 19, 1942, was ousted on May 15, 1943, and replaced by Sidi Lamine Bey. French Resident General, Gen. Charles Mast, appointed to succeed Vice Adm. Jean Esteva on May 7, 1943.

## HISTORY

Political Developments. The battle for the mastery of Tunisia, which began in mid-November of 1942, ended with an overwhelming Allied victory six months later. British and American forces entered Tunis and Bizerte, respectively, on May 7 and within a few days the last Axis troops on Tunisian and African soil surrendered (see WORLD WAR for a full account of the campaign). Many cities and towns of the protectorate had suffered severely from shelling and bombing by the contending armies. The port and naval base of Bizerte was in ruins. In Tunis the port area was completely wrecked by Allied bombings, but the remainder of the city was virtually unscathed.

Axis Rule. Throughout the Tunisian campaign the key cities and the most populous part of the protectorate remained under German and Italian control, with the Germans in supreme command. The presence of the Axis forces and their political policies aggravated the deep tensions among the four racial communities of the permanent population— French, Italians, Arabs, and Jews. The French were divided into pro-Vichy and anti-Vichy factions, with the great majority secretly adhering to the de Gaullist cause. French political dominance was threatened from two directions—by the Italian Fascists who had proclaimed the annexation of Tunisia as one of their war aims, and by the Arab nationalists who with German encouragement demanded a greater measure of independence from French rule and equality of status with the European population. However the Arabs were bitterly opposed to the Italian Fascist aspirations in Tunisia and some placed their hopes for liberation in the British and Americans. In general the Arabs of the Tunisian countryside proved friendly to the Anglo-American forces even while the campaign hung in the balance. But in the Axis-occupied areas there was friction and some violence among French, Italians, and Arabs. To a greater or less degrée, all three groups were hostile to the native Tunisian

The Vichy Resident General, Vice Adm. Jean Esteva, had refused to join in the armed resistance offered to the Axis invasion by some of the French forces in Tunisia. He permitted himself to be taken prisoner in Tunis and continued to function as Resident General more or less willingly under German direction, with the assistance of a number of Vichy French officials. Decrees discriminating against the Jews were issued. At the demand of the Axis commanders, the Jews and later Frenchmen and Italians were conscripted for labor service on the docks of Tunis and Bizerte. Some of the anti-Fascist Italians reportedly went to prison rather than cooperate with the Axis.

It was confirmed that neither Esteva nor the Bey of Tunis replied to President Roosevelt's messages of the preceding November asking permission for Allied forces to pass through Tunisia. Against his vigorous protest, Admiral Esteva was forcibly removed from Tunis in a German plane immediately prior to the fall of the capital. He was reported to have been sent to France.

French Political Measures. The Allied military victory brought Tunisia under the control first of the pro-Allied Giraud regime in Algiers and then (on June 3) of the French Committee of National Liberation headed by Ciraud and Gen. Charles de Gaulle, leader of the Fighting French movement (see ALGERIA and FRANCE under *History* for the developments at Algiers). On May 7 General Giraud appointed Gen. Charles Mast as Resident General of Tunisia. Gen. Alphonse-Pierre Juin, field commander of Giraud's froops, filled the Resident General's post temporarily until Mast recovered from injuries sufficiently to assume charge.

The Algiers regime moved promptly to reassert French control over the Arabs and Italians and to punish those French military and civil officials who had collaborated with the Axis. On May 15 General Giraud deposed Sidi Mohammed al Mounsaf as Bey of Tunisia. He had maintained cordial relations with the Germans, who recognized him as "king," and apparently had used his great influence over the Arabs on behalf of the Axis and of Arab independence. The deposed temporal and spiritual ruler of Tunisia's Moslems was reportedly exiled to Madagascar. He was succeeded by Sidi Lamine, a member of the same dynasty and youngest son of Sidi Mohammed el Habib Bey, who reigned from 1922 to 1929. Sidi Lamine was formally installed on May 15 and the following day appointed a Cabinet headed by Salheddine Baccouche. The new ruler was known for his lack of interest in politics.

Early in September the French Committee of National Liberation at Algiers annulled the privileges that had been enjoyed by Italian residents of Tunisia under the Franco-Italian convention of 1896. Under this convention the Italian Government was entitled to maintain schools, hospitals, and similar institutions for the Italian population of Tunisia. The Fascist Government had used these privileges to agitate and prepare for the annexation of Tunisia. The French Committee took the position that the convention was annulled by Italy's at-

tack upon France in 1940.

The Committee on August 5 also appointed a special commission to investigate the circumstances under which Axis troops seized control of Tunisia's key cities in November, 1942, and to determine the responsibility of the French civil and military officials involved.

Relief Operations. The inhabitants of Tunis and Bizerte suffered from an acute food shortage during the months preceding the Axis debacle. But within a week after the Allied entrance into Tunis, some 7,500 tons of food, clothing, and medical supplies had been distributed, in accordance with prearranged plans, by the North African Economic Board, an Anglo-American agency, with the assistance of the U.S. Office of Foreign Relief and Rehabilitation Operations and French authorities. Under the supervision of the OFRRO, a chain of "relief stores" was established in the newly liberated cities where persons with funds could buy essential foods and clothing. In addition, some direct "gift" relief was provided for penniless refugees. The bread ration that prevailed during the Axis occupation was doubled, and immediate steps taken to restore sanitary facilities and prevent epidemics. As a result of this coordinated program the need for charitable relief proved much less than anticipated and Tunisia made a relatively rapid return to normal.

TUNISIAN CAMPAIGN. See WORLD WAR under Tunisia-Italy Campaigns; also, MILITARY PROGRESS under Campaign Lessons.

TUNNELS. Projects involving extensive tunnel work are largely shelved during war time, owing to shortage of men and materials and to the desirability of concentrating on works that can be pushed to completion with relative rapidity. However, there are important tunnels under way, and others are deferred or halted temporarily. A notable addition to the system of submarine tunnels at New York City will be that already begun between Manhattan, at the Battery, and Hamilton St., Brooklyn. It will be 9,117 ft. long between portals and will consist of two 31-ft. tubes, each with a two-lane roadway. Although lined mainly with cast-iron, there will be short lengths of steel frame or reinforced concrete structures forming part of the land sections.

After sinking construction shafts, work began on the shield-driven tunnels from the Brooklyn end in June, 1941, and progressed 640 ft. in the west and 1,200 ft. in the east tube, with lining completed. From the New York or Manhattan end, which is mainly in rock, work was started in October, 1941, and bottom drifts 18 x 13 to 24 x 24 ft. have been driven 2,818 ft. and 2,825 ft. in the east and west tubes, respectively. At present, work is suspended but it will be resumed as soon as needed materials are again available, as the project is fully financed. Another project in the same vicinity is that for a submarine tunnel under the Narrows, entrance to New York harbor, between Brooklyn and Staten Island. In 1942, the State legislature appropriated \$50,000 for preliminary studies, and plans for the tunnel as a postwar project are under consideration. Its length will be 9,635 ft. between portals, and, like the Brooklyn-Battery tunnel, it will have two parallel two-lane tubes. An authorized project is the Midtown Manhattan tunnel crossing the city to connect the Queens Midtown tunnel under the East River (in operation since 1940) with the existing Lincoln tunnel under the Hudson. It will be 6,200 ft. between portals. The first tube of the Lincoln tunnels has been in service for some time. The second tube, started in 1941, is to be opened to traffic in 1944, the tunnel proper (7,482 ft. between portals) being already completed.

At Pittsburgh, the twin Liberty Tunnels, 5,900 ft. long, built some years ago for highway traffic through a ridge, have been modernized by new lining, paving, and lighting, and the installation of a traffic control system. Each tunnel has a two-lane roadway. On the Chesapeake & Ohio Ry., a single-track tunnel was completed at Afton, W. Va., to supplement one built in 1850 which is too small in section for modern locomotives and cars. The old one is 4,265 ft. long, lined partly with brick. The new one, 150 to 500 ft. distant, is 4,000 ft. long, 18 ft. wide, and 22 ft. high, with concrete lining throughout. In a somewhat similar case on the Delaware and Hudson R.R., near Binghamton, N.Y., the height of an old tunnel was increased 4 ft. by excavating the rock floor and underpinning the side walls. This work was carried out without interrupting traffic. The Northern Pacific R.R. will duplicate its old Bozeman Tunnel by one of larger size, since heavy traffic precludes enlarging the

present tunnel.

Two long tunnels are included in the irrigation works of the U.S. Bureau of Reclamation. On the 13-mile Continental Divide tunnel, 11 miles are completed and work is in progress, as it is part of a project deemed important in developing food supplies. Water from a reservoir on the west slope of the Rocky Mountains will flow by gravity through the tunnel to irrigate lands on the eastern slope, in Colorado. Of the six-mile Duchesne tunnel on the Provo River project in Utah, two and three-fourths miles have been driven, but work is now halted. It will divert water from the Duchesne River (a Colorado River tributary) to the Provo River and Deer Creek reservoir for irrigation purposes.

Large tunnels are required at many dams on hydroelectric projects, at first to carry the river flow during construction of the dam and later to carry the overflow or to serve as conduits or sluices. Many of these are short, but on the Apalachia project of the Tennessee Valley Authority an 8-mile tunnel carries water from the dam to the power house. On the Pit River project of the Pacific Gas & Electric Co., of California, plant No. 5 includes two 19-ft. rock tunnels, 23,150 ft. and 5,050 ft. long.

To permit the production of ores containing lead, zinc, copper, etc., important in war in-

dustries, two tunnels are being driven in Colorado for the drainage of flooded mines. At Leadville, a tunnel 13,000 ft. long, with 6,000 ft. additional in three branches to different mines, is being driven from a portal elevation 9,950 ft. above sea level. An appropriation of \$1,400,000 was made by Congress and the work is under the supervision of the U.S. Bureau of Mines. The other work is extension of an existing tunnel for a mine near Ouray, where not only were the workings flooded, but the headworks of the shaft had been destroyed by snow slides. This tunnel will serve both for drainage and for bringing out the ore. The older tunnel is 5,540 ft. long, 7 x 8 ft. in section, while the new one, 9 x 9 ft., will be 6,300 ft. With the portal elevation at 10,673 ft., the tunnel will rise to 10,700 ft. From its end a raise or incline will be driven to reach the lower workings of the mine at an elevation of 12,500 ft.

In relation to tunnel ventilation, the U.S. Public Health Service has made studies in the Holland Tunnel, under the Hudson River at New York, used only by automobiles, to determine the effects of carbon monoxide and other toxic gases upon employees in the tunnel. The average content was 70 parts per million, but ranged from 20 to 200, and if it exceeds 250, an alarm bell is rung automatically. There was no evidence of temporary or permanent ill effects. In mines, the exhaust from oil-engine locomotives may be more toxic than that from the gasoline engines of automobiles.

In Mexico, the Tequixquiac tunnel, under construction, is for flood control in the valley occupied by the federal district and city of Mexico. It will be seven miles long. A commercial agreement of 1948 between Argentina and Chile provides for new roads on both sides of the Andes connected by a long tunnel. Tunnels will be included also on the 200-mile link to connect the railways of the two countries for a route between Buenos Aires and Antofagasta. To connect mainline routes on the Chinese railways, a tunnel under the Yangtse River at Nanking is proposed, as alternative to a bridge. In Australia, the State of Victoria is developing power on the Kilwa River by a number of tunnels connecting a series of dams and reservoirs. A 21-mile tunnel through a mountain range is proposed by the Union of South Africa as part of an irrigation project.

In Canada, a short but important tunnel forms part of a project for draining Steep Rock Lake, in Ontario, the bed of which is underlaid by an extensive deposit of iron ore. The tunnel, 1,200 ft. long, opens into the bed of the lake by a 115-ft. raise or incline driven upward at an angle of 50 degrees and opened by a final heavy blast. The tunnel is  $10 \times 12$  ft. in section, except that the raise is 14 ft. square. The longest tunnel on the Canadian National Railways is that under Mount Royal, 3.1 miles, forming the approach to the new Montreal terminal station, which was put in service in July, 1943.

On the government railways of Switzerland, part of a tunnel two miles long, near Courgenay, collapsed in February. Traffic was handled over the Ragnier Pass by busses and motor trucks until the line was reopened. Some tunnels on the railroad crossing the Brenner Pass, between Germany and Italy, were reported blocked by Allied bombing attacks. A tunnel of very exceptional character was that driven (in 1941) by American and English prisoners of war to escape from a camp south of Algiers, Africa. It was some 250 ft. long, but only 2 ft. wide and 2 to 3 ft. high, starting under a barrack building and passing under the wall of

the camp and a line of barbed-wire fencing. Tools and methods were improvised and extreme caution

was necessary.

The centennial of the Thames Tunnel, in London, England, was celebrated in March, 1943. Work was begun in 1825, but many serious diffi-culties were encountered. It is 1,200 ft. long between the shafts, and is formed with twin bricklined compartments 13 ft. 9 in. wide and 16 ft. 4 in. high. For driving through the soft ground, a shield advanced by jacks was invented by the engineer, Marc Isambard Brunel. Although built for pedestrians, it was purchased in 1866 by the East London Railway, which began operating the line in 1869. It is still in operation as a link between railway systems north and south of the Thames. See Dams; Water Supply. E. E. Russell Tratman.

TURKEY. A republic comprising parts of Asia Minor and the Balkan peninsula as well as Imbros, Tenedos, and the Rabbit Islands in the Aegean Sea.

Capital, Ankara (Angora).

Area and Population. The area, including the Sanjak of Alexandretta (Hatay) but excluding 452 sq. mi. of marshes and 3,256 sq. mi. of lakes, is 296,346 sq. mi. (13,012 in Europe and 283,334 in Asia). The Sanjak of Alexandretta (area 1,930 sq. mi.; pop., about 228,000) was ceded to Turkey by France on June 23, 1939. The population of Turkey at the census of Oct. 20, 1940, was 17,-869,901 (16,158,018 at the 1935 census). Populations of the chief cities in 1940 were: Istanbul, 789,846; Izmir (Smyrna), 184,362; Ankara (Angora), 155,544; Seyhan (Adana), 89,990; Bursa (Brusa), 77,348; Eskisehir, 60,514; Gaziantep, 57,314; Konya, 56,698; Kayseri, 53,908.

Defense. Military service is compulsory. As of Jan. 1, 1941, an estimated 800,000 troops, excluding the air force of 3,500, were under arms. The air force in 1940 had about 370 first-line and 500 second-line planes. During 1939-43 the Turks made substantial progress in modernizing their army with weapons supplied by Germany, Britain, and the United States. The navy in 1942 consisted of the rebuilt German battle cruiser Goeben (Turkish name, Yavuz) of 23,100 tons, 2 old but modernized cruisers, 4 destroyers, 9 submarines, 2 gunboats, 3 minesweepers, and various auxiliary craft. Two new destroyers and a submarine were delivered to Turkey by the British early in 1942. See Finance.

Education and Religion. Illiteracy was estimated at 55 per cent of the adult population in 1935, but only 2,517, 878 were literate in the Latin alphabet, introduced in 1928. Students enrolled in 1939-40: Primary, 905,139; secondary, 92,327; lycées, 26,-401; normal schools, 4,120; professional schools, 9,504; universities and other institutions of higher education, 12,325. At the census of 1935 there were 15,838,673 Moslems, 125,046 Orthodox Christians, 78,730 Jews, 32,155 Roman Catholics, 44,526 Gregorians, 11,229 Armenians, 8,586 Protestants, and 12,967 adherents of other religions.

Production. Agriculture supports about four-fifths of the total population. The 1942 cereal crops, with estimated yields for 1943 in parentheses, were (in metric tons): Wheat 2,736,900 (4,000,000); barley, 1,417,151 (1,500,000); rye, 309,672 (350,000); oats, 243,244 (300,000); corn, 665,731 000); oats, 243,244 (300,000); corn, 665,731 (750,000). Yields of other leading crops in 1942 were (metric tons): Cotton, 50,000; raisins, 50,000; figs, 18,000; olive oil, 30,000; tobacco, 70,000; rice, 33,000 in 1941. Livestock in 1942 included 17,283,000 sheep, 37,703,000 Angora goats, 8,832,000 other goats, 7,588,000 cattle, 690,000

buffaloes, 763,000 horses, 97,000 camels, 70,-000 mules, and 1,854,000 donkeys. Production of the chief minerals was (in metric tons): Coal, 2,-508,000 in 1942; copper (smelter), 6,746 in 1942; chrome ore, 126,575 in 1940; iron ore, 180,344 in 1940; antimony (metal content), 372 in 1940; quicksilver, 17 in 1940; magnesite, 845 in 1940; emery, 9,113 in 1940; borax, 5,380 in 1940; lead (condition), 3640 in 1940. (smelter), 3,640 in 1940.

The 1940 industrial production included (metric tons): Cotton yarn, 27,433; woolen yarn, 8,429; paper, 9,540; cement, 266,637 (180,000 in 1942); glass, 7,353. A government-sponsored industrialization program inaugurated in 1934 resulted in the cetablishment of programs for the size including the establishment of numerous factories, including steel, textile, paper, and flour mills; glass, soap, and chemical factories; sugar refineries; cement and canning plants; olive oil presses and refineries, leather tanneries, hydroelectric plants, etc.

Foreign Trade. Publication of official trade statistics was discontinued May 31, 1941. For the first five months of 1941 imports were valued at £T32,849,000 and exports at £T73,921,000. For the calendar year 1940 imports were £T68,922,-700; exports, £T111,446,500. Germany was Turkey's leading trade partner before World War II. Beginning in 1942, Anglo-American trade with Turkey increased rapidly. British Empire exports to Turkey in 1942 were unofficially reported at £T60,000,000 and British Empire imports from Turkey at £T64,000,000. United States exports to Turkey in 1942 (exclusive of lend-lease goods) were valued at about \$15,000,000; U.S. imports from Turkey, \$17,000,000. For the distribution of trade and the principal exports in 1940, see 1943 Year Book.

Finance. Ordinary budget estimates for the fiscal year ended May 31, 1944, anticipated receipts of £T486,720,500 and expenditures of £T486,717,-849, as contrasted with £T394,328,340 and £T394,326,938, respectively, for 1942-43. The ordinary defense appropriation for 1943-44 was £T116,031,238 and extraordinary appropriations of £T220,000,000 were voted by the National Assembly up to Sept. 30, 1943. The Minister of Finance stated that in 1942–43 extraordinary defense appropriations totaled more than £T400,000,000. In 1941-42 actual receipts were reported at £T309,700,000 and total expenditures at £T564,-2.1309,700,000 and total expenditures at £.1309,700,000. Public debt on May 31, 1939: £.T619,-385,681 (foreign, £.T223,795,688). Currency in circulation totaled £.T281,000,000 on Dec. 31, 1939, and £.T732,000,000 on June 30, 1943. Average exchange rate of the Turkish pound: \$0.7259

in 1940, \$0.7624 in 1941.

Transportation. As of Dec. 31, 1940, railway lines extended 4,619 miles, of which all except 270 miles were state-owned and operated. A law of June 3, 1941, authorized extension of railway lines from Diyarbekir and Elazig stations to the frontiers of Iraq and Iran, respectively. Construction of these lines and of the Zonguldak-Kozlu line connecting the Kozlu coal basin with the Black Sea was carried forward during 1941-43. A 57-mile line from Diyarbekir to Batman was opened to traffic in June, 1943. Highways extended 25,274 miles in 1940. During the summer months there was a daily air service between Ankara and Istanbul; no foreign airlines entered the country. Istanbul handled 76.1 per cent of the country's imports and 35.9 per cent of the exports in 1939. The Turkish merchant marine on May 1, 1941, included 125 vessels of 190,800 gross tons. British contractors were improving the ports of Mersin and Iskenderun (Alexandretta) during 1943.

Government. The Constitution of Jan. 20, 1921, as amended in 1924 and 1934, vests executive and legislative power in the Grand National Assembly, consisting of 429 deputies elected for four years by universal male and female suffrage. The Assembly exercises executive power through the President, elected for four years by the Assembly, and through the Council of Ministers, chosen by the President. In practice the President wields dictatorial powers. President in 1943, Gen. Ismet Inonu, who was elected to succeed President Kemal Ataturk on Nov. 11, 1938, and reelected Apr. 3, 1939. The People's party, the only legal political organization, in December, 1938, elected President Inonu as President General of the party for life. The Cabinet as reorganized July 9, 1942, was headed by Shukru Saracoglu.
On Oct. 19, 1939, Turkey signed a 15-year mili-

tary alliance with Great Britain and France (see 1939 Year Book, p. 769, for its provisions). A ten-year nonaggression treaty was signed with Germany June 18, 1941. For developments in 1943, see below.

#### HISTORY

Neutrality Policy. The course of Turkish foreign policy remained one of the great question marks of European affairs throughout 1943. As in the preceding war years, Allied and Axis diplomacy engaged in a fierce tussle to sway Turkey from its neutral path. There was, however, a significant change in the rival policies of the belligerents, reflecting the declining military fortunes of the Axis

powers.

During 1941 and 1942 Germany and Italy had employed every conceivable threat and inducement in a vain effort to force Turkey into the struggle on the side of the Axis, while the British, with American support, concentrated upon keeping the Turks neutral and thus blocking the German pathway into the Middle East. This situation was reversed following the German defeat at Stalingrad, the expulsion of Axis forces from North Africa, and the ensuing successful Allied offensives. Now it was the turn of the Allies to urge Turkish intervention on their side, while the German Ambassador at Ankara, Franz von Papen, fought a rearguard action by trying to bolster Turkish neutrality.

In line with their national interests and sympathies, the Turks gradually shifted from the more or less strict neutrality of previous years to a more openly pro-Allied nonbelligerency. Twenty-three American and seven British airmen, interned in Turkey for nearly a year after forced landings, were released April 30. Seven more American fliers who landed in Turkey after the great raid of August 1 on the Ploesti oil fields were released almost immediately. But the Turks firmly refused to enter the war or to place Turkish bases at the disposal

of the Allies.

The four main objectives of Turkish foreign policy, proclaimed on various occasions during 1942, remained unchanged at the close of 1943. They were: (1) maintenance of nonbelligerency as long as possible, (2) adherence to the Anglo-Turkish alliance of Oct. 19, 1939, (3) observance of the nonaggression pacts concluded with Russia on Mar. 24, 1941, and with Germany on June 18, 1941, and (4) armed resistance against aggression from any source. Meanwhile the Turks took full advantage of the rivalry for their favor among the warring powers to obtain further modern equipment for the Turkish armed forces and valuable economic concessions from both sides.

Adana Conference. The first Allied move of 1943 to bring Turkey into more active cooperation was agreed upon at the Roosevelt-Churchill conference at Casablanca in January. It was announced in London February 2 that Prime Minister Churchill and President Ismet Inonu, accompanied by high political and military officials of their respective governments, had concluded a two-days' conference at Adana in south central Turkey, which took place on January 30-31. A communiqué stated that the conferees reached agreement on policy with respect to "the present European situation," postwar problems, and "the manner in which Great Britain and the United States would be able to help Turkey materially to consolidate her own general defensive security."

The conference was held at Churchill's request, but the fact that the Turkish leaders agreed to such a gathering on Turkish soil was considered an act of defiance toward Germany that would not have been conceivable six months earlier. However an official Turkish statement asserted that Churchill did not ask Turkey to enter the war and that "the Turkish Government did not undertake any

such commitment.

The practical results of the Adana conference were first of all an increase in British and U.S. shipments of war materials, railway rolling stock, and other industrial equipment to Turkey and the provision of additional Allied shipping to speed up deliveries. Secondly, closer liaison was developed between the Turkish and British armed forces in the Middle East to permit coordination of their military efforts in case Turkey entered the conflict. Air Chief Marshal Sir Sholto Douglas, Com-

mander in Chief of Allied Air Forces in the Middle East, returned to Ankara on March 12 for further conferences with the Turkish General Staff. Gen. Sir Henry Maitland Wilson, British Commander in Chief in the Middle East, continued these discussions during a four-day visit to Ankara on April 15-19. He announced that a coordinated agreement for carrying out the decisions of the Casablanca and Adana conferences had been reached with the Turkish General Staff. Meanwhile a Turkish military mission had inspected Allied forces in the Middle East and North Africa, and Turkish airmen had been sent to Egypt to train with the Royal Air Force. About the same time about 100 Turkish army officers were sent to the United States to study technical aspects of warfare.

Russo-Turkish Negotiations. A third result of the Adana Conference was the initiation a week later of a renewed effort to reach a permanent Russo-Turkish accord that would clear the way for full Turkish cooperation with United Nations military forces in an invasion of the Balkans. These negotiations were launched on February 6 when Premier Saracoglu was the guest of honor at a formal dinner at the Soviet Embassy in Ankara, which was attended by the American and British Ambassadors. Anglo-American diplomacy had worked throughout 1942 to bring the Turks and Russians together, but their progress had been slowed by Axis intrigues and by Turkish suspicions of Soviet aims in the Straits, the Balkans, and Iran. At Adana, according to a leading Turkish editor, Churchill gave assurances "of Russia's goodwill plus the Allies' intention that Turkey will not be faced with any postwar aggression." faced with any postwar aggression.

The weeks of intense diplomatic activity that followed apparently achieved some definite progress. Premier Saracoglu told the Sixth Congress of the Turkish People's party on June 15 that relations between Moscow and Ankara had definitely improved. However the expected announcement of a Russo-Turkish agreement on war and postwar aims and objectives was not forthcoming. The negotiations were still in progress when a contact tator in the Soviet publication War and the Working Class accused Turkey on September 2 of prolaming the war by its continued neutrality. The gotiations were still in progress when a commeneditor of a leading Istanbul newspaper replied that the Allies had profited from Turkish neutrality and charged that Moscow was following a policy of cold-blooded self-interest in its death struggle with Nazi Germany.

German Relations. The Turkish Government displayed a capacity for a somewhat similar "realism" in its relations with Hitler's Reich. As explained in the 1943 Year Book, p. 696, the Turks had yielded to German pressure in 1942 and agreed to divert the output of its valuable chromite deposits from Britain to Germany upon expiration of the British chromite-purchase agreement on Jan. 8, 1943. The agreement with Berlin, however, was contingent upon the delivery to Turkey by the end of 1942 of war material to the value of 18,000,000

Turkish pounds.

Germany's failure to make these deliveries in full gave the Turks an opportunity to cancel the chromite arrangement had they so desired. The Allies exerted every influence to deprive the Reich of this vital mineral, essential to the hardening of armor plate, but were out-maneuvered and outbid

by the Germans.

In December, 1942, the German Ambassador renewed the offer to Turkey of a credit of 100,000,-000 reichsmarks to be used for the purchase of German war material. This credit, first granted in 1939, had been suspended upon the conclusion of the Anglo-Turkish alliance. The credit was to be redeemed in ten years at the rate of 12,500,000 reichsmarks annually, payable in Turkish products. The Turks signed an agreement in Berlin on December 31 accepting the German offer, after the Reich Government had demonstrated its ability to make the required arms deliveries.

This agreement enabled the Germans to demand fulfillment of the 1942 chromite accord. To emphasize their point, the Germans were reported on January 10 to have stopped all shipments to Tur-key pending "clarification" of Ankara's attitude on the chromite deal. The Turks then formally agreed to fulfill their part of the contract. After weeks of bargaining, a new German-Turkish trade and clearing pact was signed in Ankara April 18. It provided for the exchange of goods to the value of

120,000,000 reichsmarks up to May 1, 1944. According to an Istanbul dispatch to The New York Times of August 16, the Germans were making the scheduled deliveries of arms and other goods under the chromite and barter contracts, but were having difficulty in obtaining the chromite from Turkey. The Turks were said to be giving priority for use of their limited railway rolling stock and shipping in handling Allied lend-lease

materials.

To keep the Turks from yielding to Allied pressure for military intervention, the Germans in June invited a Turkish military mission to inspect sectors of both the Russian front and the fortifications guarding western Europe against an Allied invasion. In October Berlin reportedly invited the Turks to garrison the Italian Dodecanese islands with Turkish troops—an offer obviously calculated to create dissension among the United Nations. It was rejected.

Because of inability to use air bases on the adjacent Turkish coast, the Allies were unable to prevent German recapture in November of Leros, Kos, and other Italian and Greek islands in the Aegean Sea occupied by Allied forces following the Italian surrender. A major objective of the German campaign in the Aegean area was to keep Turkey neutral by a display of German strength, and the demonstration appeared to have its desired effect.

Allied Pressure Increased. As the year drew toward a close, the Allies displayed growing impatience at Turkey's stubborn neutrality. Anglo-American lend-lease aid to the Turks had been based upon the understanding that Turkish bases would be made available for Allied use as soon as Turkey's defensive position was secure and the Allies were in a position to make good use of the bases. Such cooperation from Turkey was called for under the Anglo-Turkish alliance, but the Turks continued to side-step Allied requests for more effective aid by pointing out that Istanbul and Adrianople were fully exposed to Axis air attacks. They insisted on further arms deliveries and on a definite understanding with the Soviet Union, guaranteed by the Anglo-American powers, before they would agree to the cession of bases or active intervention in the war.

The problem of winning active Turkish collaboration was one of the issues discussed at the conference of American, British, and Soviet Foreign Ministers at Moscow late in October (see UNITED NATIONS). That conference was followed by a more intensive Allied diplomatic campaign in Turkey. A conference between the Turkish and British Foreign Ministers followed in Cairo on November 5–8. Press reports indicated that Foreign Secretary Eden urged Turkey, in the interests of her future good relations with Russia, to take action that would help to divert German troops from the Russian front.

Foreign Minister Menemencioglu reported on his conversations with Eden before a lengthy secret session of the Turkish Grand National Assembly on November 16. A communiqué stated that the Assembly had "discussed questions resulting from the exigencies of the treaty of alliance" with Britain and that the Government's policy had been approved. However there was no outward change in Turkish foreign policy, despite a press report from Ankara on November 17 indicating that Turkey was giving undercover assistance to Allied

armed forces.

Following the adoption of an Allied military timetable for 1944 at the Tehran Conference early in December, the Allied leaders again raised the subject of Turkish cooperation at a full-dress conference. Immediately after the Churchill-Roosevelt-Stalin meeting at Tehran broke up, President Inonu was invited to Cairo to confer with Roosevelt and Churchill. The conferences, lasting for three days (Dec. 4-6), were attended by the British and Turkish Foreign Ministers and by Harry Hopkins, assistant to President Roosevelt. A communiqué issued December 7 revealed only that they had "examined at length the policy to be followed, taking into account the joint and several interests of the three countries.

There were strong indications that the Allied leaders called upon Turkey's President to fulfill Turkish obligations under the Anglo-Turkish alliance without undue delay. It was reported December 8 that Turkey had established militarized zones three miles wide on each side of the Bosporus, that surveillance of Axis nationals in Turkey had been tightened, and other precautionary meas-

Nevertheless Foreign Minister Menemencioglu

announced upon his return to Ankara the same day that Turkey's foreign policy remained unchanged but that the Anglo-Turkish alliance had been strengthened as a result of the Cairo discussions. On December 14 President Inonu in a broadcast to the nation declared that Turkey had never been a neutral country during the war. "She is in reality," he said, "one of the United Nations, contributing her share to winning this great struggle." But the year ended with the Turks holding to their stand that if they entered the war it would be on their own terms and at a time they considered opportune.

Balkan Policy. The Turks meanwhile had displayed a growing desire to reconstitute and extend the old Balkan Entente as a means of forestalling and checking Russian expansion and penetration into that area. The Turkish press was critical of Soviet opposition to federation movements in the Balkans and in Eastern Europe generally. While attempting to overcome Russian opposition on this score, Ankara strengthened its ties with the Greek and Yugoslav Governments-in-Exile and attempted to induce Bulgaria and Rumania to withdraw from the conflict before their positions became hope-lessly compromised. Axis attempts to use Turkey's anxiety about the Balkan situation as a means of launching a Berlin-inspired peace offensive were

summarily rejected by the Turks.

Internal Politics. An edict issued by the People's party on January 13 dissolved the Grand National Assembly in preparation for parliamentary elections, which were held in February. The new National Assembly, composed entirely of People's party members, convened on March 8 and unanimously reelected President Inonu to a second term of four years. The Cabinet resigned at the same time and was reorganized March 9 with Premier Saracoglu and six of the former Ministers retaining their posts, including Recep Peker (Interior), Gen. Ali Riza Artunkal (National Defense), Numan Menemencioglu (Foreign Affairs), Fuad Agrali (Finance), and Hasan Ali Yucel (Education). Premier Saracoglu won a vote of confidence from the National Assembly on March 17 after a speech expressing the Government's full sympathy with the Allied cause.

A suggestion for partial demobilization of the large force that Turkey had kept under arms since 1940 was firmly rejected by the Premier in the National Assembly on June 5. When the National Assembly reconvened November 1, President Inonu stressed the Government's faith in and support of a world order "based on the sincere cooperation of all free nations of the world, great and small."

Capital Levy Controversy. The enforcement, beginning in December, 1942, of a drastic tax on wealth authorized by the Grand National Assembly on Nov. 11, 1942, provoked widespread repercussions, including protests from the Christian and Jewish minorities in Turkey and from the Greek

and other foreign governments.

According to Government spokesmen, wealth tax, or varlik vergisi, was a last resort in the effort to curb an alarming inflationary trend produced by wartime conditions. There was an acute scarcity of imported goods, coupled with a labor shortage, heavy government deficits, and a rapid expansion of the currency resulting from the maintenance of nearly a million men under arms at a cost of more than a million Turkish pounds a day. Speculators and profiteers had reaped huge profits in deals in scarce commodities. There was a tremendous increase in prices and a flight of

capital from paper money into tangible wealth. Currency notes in circulation rose from £T281,-000,000 on Dec. 31, 1939, to £T757,000,000 on

Oct. 31, 1943.

The Turkish peasantry were already heavily taxed. The Government collected 8 per cent of their crops as a direct levy and required them to sell 12 per cent of their cereal crops to the state at fixed prices. Since the peasants could not stand a further tax increase, the Government imposed its capital levy on wealth and excess profits of the following classes of the population: salaried workers employed by private firms, important farmers (5 per cent of the value of their properties was the maximum levy), realty owners, companies and individuals engaged in business since 1939, and middlemen and commissionaires. The law provided that persons failing to pay the capital levy within one month were subject to forced labor on

nonmilitary projects.

Gross discrimination in the application of the levy by local assessment commissions aroused charges that the Government was intent upon driving the Christian and Jewish minorities and certain foreign-owned concerns out of business, thus ending minority control of a large part of the commercial life of the country. The Government flatly denied this charge, declaring that the tax was impartially aimed at all wealthy tax evaders and profiteers. However a survey made by C. L. Sulzberger of *The New York Times* showed that the assessments levied on businesses and fortunes of Christians and Jews possessing Turkish citizen-ship were much heavier than on Moslem Turkish businesses. He quoted a survey by the Foreign Chamber of Commerce showing the following ratio of assessments for Istanbul Province: Moslem Turkish merchants, 4.94 per cent; Greek Orthodox Turkish merchants, 156 per cent; Jewish Turkish merchants, 179 per cent; Armenian Christian Turkish merchants, 232 per cent. Foreign-owned businesses and fortunes suffered

similar discrimination. Those owned by Greeks, Yugoslavs and Italians were taxed almost as heavily as those of the Turkish minorities. German, Bulgarian, and French enterprises were taxed less severely while the levies assessed against British and American-owned enterprises were relatively light. The capital levy was so drastically applied to the Turkish minorities that thousands of them were said to have been ruined financially. An estimated 30,000 persons, almost all of them members of the minorities, were unable or unwilling to meet the payments demanded and were sent to camps in eastern Turkey for forced labor on roads. By no means all of these prisoners were wealthy or even

moderately well-to-do.

The discriminatory features of the law and the forced labor penalty aroused a vigorous protest from the Greek Government and brought indirect representations from the British and U.S. Governments. Just before President Inonu left Ankara for his meeting with Roosevelt and Churchill at Cairo, a decree was issued (December 2) ordering the release from forced-labor camps of those who had paid part of the amount assessed against them.

In August Premier Saracoglu said that the Covernment had originally hoped to obtain £T250,-000,000 through the capital levy, but that actually £T300,000,000 had already been collected. But in Istanbul Province alone the assessments levied to-taled £T344,000,000, or nearly half the total amount of currency in circulation. According to the Premier, the wealth tax would enable the Government to hold inflation in check for another year. If the war was not over by that time, he said, further emergency measures would be required.

Industrialization Continued. Notwithstanding fi-

nancial-economic difficulties and war threats, the Government pressed steadily ahead with the longterm program of industrialization through which it hoped to modernize and strengthen the nation. New industrial plants opened during the year included a woolen textile factory, a cement plant, a second paper and cellulose plant, several chemical units, and two cotton-spinning mills. The capacity of the Karabuk iron and steel works was expanded. A number of new irrigation and flood-control projects were launched.

Other Events. The series of disastrous earthquakes that had devastated various districts during previous years was extended in 1943. About 2,000 persons were killed in the town of Adapazar, near Istanbul, on June 20 (see EARTHQUAKES). Another earth shock that rocked the Black Sea coast northeast of Ankara on November 26 cost an estimated 4,000 lives. A serious typhus epidemic broke out in Istanbul and other Turkish cities late in May, but it was brought under control.

UGANDA. A British protectorate in East Africa. Area, 93,981 square miles, including 13,680 square miles of water. Population (1942), 3,865,608 (3,884,981 Africans, 18,381 Asiatics, 2,246 Europeans). Education (1939): 292,097 children attended schools. The college at Makerere provides higher education. In 1942 the cost of African education was £124,000. Bantu languages are spoken by some 2,400,000 Africans. Chief towns: Entebbe (capital), Kampala, and Jinja.

Production and Trade. The main products are cotton (100,000 bales in 1942-43), cottonseed, coffee, sugar, groundnuts, sesame, pyrethrum, hides, skins, salt, tin, gold, and timber. Large number of cattle, sheep, and goats are raised. Trade (1941): imports totaled £2,345,629 (cotton fabrics and manufactures £687,657); exports £5,710,900 (cotton £4,262,235, coffee £597,271, sugar £162,-107). 197, hides and skins £103,839). The value of reexports from Uganda and Kenya in 1941 was £3,494,000. Kenya, Tanganyika, and Uganda have a uniform customs tariff.

Communications. There are steamer services on the lakes of Victoria, Kioga, and Albert. Railways (1941): Kenya and Uganda railways carried

(1941): Kenya and Uganda railways carried 1,643,156 passengers (exclusive of 204,522 troops and prisoners of war) and 2,257,761 tons of freight. Roads (1940): 2,500 miles.

Government. The 1942 budget estimates indicate a surplus of over £302,200. Finance (1941): revenue £2,178,283; expenditure £1,937,926. Public debt, Dec. 31, 1940, £2,850,000. The Government in carrying out the functions of government. ernor, in carrying out the functions of govern-ment, is assisted by an executive council of 7

members and a legislative council of 6 official members and 4 nominated unofficial members. Governor and Commander in Chief, Sir Charles Dundas (app. July 8, 1940).

State comprising the greater part or the former Russian Empire. Capital, Moscow.

Area and Population. The area as of Aug. 31, 1939, was about 8,200,000 square miles (73 per cent in Asia and 27 per cent in Europe). The census of Jan. 17, 1939, showed a population of 170,467,186 (88,802,205 females and 81,664,981 males), compared with 147,027,915 at the 1926 census. The urban population at the 1939 census was 55. The urban population at the 1939 census was 55,-909,908; rural, 124,557,278. Following the outbreak of World War II on Sept. 1, 1939, the following territories were annexed to the Soviet Union, only to be reconquered by German, Finnish, and Rumanian forces in 1941.

## AREAS INCORPORATED INTO THE U.S.S.R.

|   | Date of annexation   |   | Population,<br>Jan. 1, 1940*                                |

| Total   |  | 174,171                                       | 22,198,000  |

<sup>c</sup> Taking into account the transfer of Vilna Territory (area, 2,570 sq. miles; pop. 457,000) to Lithuania by the Soviet-Lithuanian treaty of Oct. 10, 1939. <sup>5</sup> Approximate. <sup>c</sup> Almost all of the inhabitants of Finnish territories ceded to the U.S.S.R. (about 450,000) were evacuated to Finland. \*Estimated.

The newly acquired Polish territories were incorporated in the Ukrainian and White (Byelo) Russian Soviet Socialist Republics, Oct. 1-2, 1939. The Finnish provinces on Mar. 31, 1940, were joined to the Karelian S.S.R., which was then renamed the United Karelo-Finnish S.S.R. and raised to the status of a constituent republic of the U.S.S.R. The major part of Bessarabia was merged with the Moldavian Autonomous S.S.R. on Aug. 2, 1940, to form the constituent Moldavian S.S.R.

The remainder of Bessarabia, together with Northern Bukovina, was incorporated in the Ukrainian S.S.R. Lithuania, Latvia, and Estonia were given the status of constituent republics upon annexation. The addition of these five new units raised the number of constituent republics of the Soviet Union from 11 to 16. These republics, with their capitals, areas, and populations (Soviet statistics), are given in the accompanying table.

U.S.S.R.: CONSTITUENT REPUBLICS

| pulations<br>1939     |

<sup>c</sup> Exclusive of inhabitants remaining in ceded Finnish area.

The occupation by Axis forces during 1941 and 1942 of a large area of European Russia caused a huge migration of population and industry to the east.

The populations of the 29 leading cities at the 1926 and 1939 censuses, with the percentage increases for that period, were as follows:

POPULATIONS OF CITIES: 1926 AND 1939

| City           | Dec. 17, 1926       | Jan. 17, 1939 | % gain  |
|----------------|---------------------|---------------|---------|
| Moscow         |                     | 4,137,018     | 203.9   |
| Leningrad      | 1.690,065           | 3,191,304     | 188.8   |
| Kiev           | 513,637             | 846,293       | 164.8   |
| Kharkov        | 417,342             | 833,432       | 199.7   |

| Stalinsk       |                     | 169,538       | 4,353.8 |
| Kirov          | 62,097              | 143,181       | 230.6   |

Education. During the two decades ending in 1937, illiteracy was reported to have declined from 67.7 per cent to less than 8 per cent. In the academic year 1940–41, pupils attending elementary and secondary schools numbered about 36,765,000. There were about 1,200,000 students in technical schools and workers' faculties; about 1,800,000 children in nurseries and kindergartens, exclusive of 5,700,000 children placed in collective farm nurseries and kindergartens during harvest season; and 550,000 or more students in 781 universities and colleges. Also see *History*.

Production, etc. In the Soviet Union transport and communications are conducted as Federal departments. Banking is centralized in a State Bank under government control. Distribution is socialized,

with retail trade in the cities conducted mainly by local administrative bodies and in the villages by consumer cooperatives. Industrial production is carried on largely by State enterprises, operating under the general direction of appropriate Commissariats (government departments). A State Planning Commission (Gosplan) plots the objectives for each year and for five-year periods. An Economic Council acts as a coordinative body. An organization in the Commissariat of State Control checks and supervises results.

State planning is an essential of Soviet economy. The planning system is designed to direct and coordinate the employment of the energies and resources of the country for orderly development. The planning system, however, goes beyond the economic field. It includes science, education, public health, and the extensive social services designed to safeguard the welfare and security of the citizenship. Beginning in 1939, the Soviet Government withheld publication of detailed information on industrial production, agriculture, and other phases of economic development. For prewar production figures for industry, mining, and agriculture, see 1943 Year Book. For more recent development, see below under History.

Foreign Trade. Foreign commerce is a governmental monopoly exercised by the Commissariat of Foreign Trade which maintains trading agencies abroad. Imports and exports are regulated in accordance with the country's system of planned economy. In 1938, the last year for which trade figures were published, imports totaled 1,422,882,000 rubles and exports 1,331,927,000 rubles, nominally equivalent to \$261,757,000 and \$250,751,000, respectively, in U.S. currency. For preceding years' trade, see YEAR BOOK for 1940, p. 751

rade, see Year Book for 1940, p. 751.

Finance. The accompanying table shows the expansion of the joint budget of the Union and the constituent republics during the years 1938–41. The totals include (1) receipts of the "national economy" (taxes, profits, and proceeds of loans from the national economy), (2) capital expenditure for financing the national economy, (3) taxes and proceeds of loans from the civil population, and (4) expenditure on the State administration proper. Defense appropriations in 1941 were 70.9 billion rubles. Total national income for that year was estimated at 222.4 billion rubles.

SOVIET UNION BUDGETS
[In millions of rubles]

| Year         | Total receipts     | Loans  | Expenditures       | Surplus |
|--------------|--------------------|--------|--------------------|---------|
| 1938         | 127,500            |        | 124,000            | 3,500   |
| 1939<br>1940 | 155,900<br>178,080 | 11.397 | 153,100<br>173,259 | 2,800   |
| 1941         | 216.840            | 13.230 | 216.052            | 4,821   |

Estimates. Figures for other years represent closed accounts.

The Soviet Government repudiated the state debt outstanding as of Jan. 28, 1918. The Soviet internal debt was estimated at 10,088,900,000 rubles on Jan. 1, 1933, and 39,800,000,000 rubles on Aug. 1, 1940. A 1942 war loan issued April 14 in the amount of 10 billion rubles was oversubscribed by 2,860,831,000 rubles within 10 days. The sum of 3,350,000,000 rubles was set aside for debt service in the 1941 budget. Nominal exchange rate of the ruble, for foreign trade valuation purposes only, was 5.3 rubles equals \$1 (1 ruble equals \$0.1887).

Transportation. Railway mileage increased from 53,700 in 1937 to an estimated 62,000 miles on Jan. 1, 1941 (including lines in Russian-annexed territories). In his speech of Sept. 30, 1942, Hitler stated that an extensive mileage of new strategic

UNION OF SOVIET SOCIALIST REPUBLICS

railways had been built in German-occupied Russia and that the prewar network of railways had been repaired and largely converted to the German gage. Freight turn-over in 1940 was 409,000,000,-000 ton-kilometers. Highways extended 1,682,000 miles in 1940. Some 65,826 miles of inland waterways are navigable. In 1940 they handled 36,000,000,000 ton-kilometers of freight. Two important new lines, Moscow-Irkutsk and Moscow to Alma-Ata, were added to the civil air network in 1940. The merchant marine on July 1, 1939, comprised 716 vessels of 1,315,766 gross tons.

Government. Under the Constitution of Dec. 5, 1936, supreme political power is vested in the Supreme Soviet of the U.S.S.R., meeting twice a year, and elected for a period of four years by universal direct suffrage and with secret ballot. The Communist Party, however, is the only legal political party and all candidates for elective office must have its approval. The Supreme Soviet consists of two legislative chambers with equal rights —the Council of the Union, and the Council of Nationalities. The Council of the Union has 647 members (one for each 300,000 inhabitants) and the Council of Nationalities 713 members representing the constituent republics (25 from each), autonomous republics (11 from each), autonomous oblasts (5 from each), and national okrugs (1 from each). The two chambers in joint session elect a Presidium consisting of 42 members (including a president, 16 vice-presidents, a secretary, and 24 others) with wide administrative powers between sessions of the Supreme Soviet, including ratification of treaties and declaration of a state of war. The Presidium supervises the work of the Council of the People's Commissars, selected by the Supreme Soviet, which acts as the executive and administrative organ of the State.

Joseph Stalin became general secretary of the Russian Communist Party in 1922 and after ban-ishing Leon Trotsky in 1924 established a rigid but unofficial personal dictatorship through his control of Communist party policies. He became a member of the Presidium in 1925 and on May 6, 1941, replaced Vyacheslav Molotov as President of the Council of People's Commissars, or Premier. Molotov became Vice Premier and Foreign Commissar. On July I, 1941, after the German invasion began, the Presidium of the Supreme Soviet, the Central Committee of the Communist party, and the Council of People's Commissars announced that all powers had been concentrated in the hands of a Committee for State Defense consisting of Stalin (chairman), Molotov (vice chairman), Marshal Klementy E. Voroshilov, L. P. Beria, Commissar for State Security; and Georgi M. Malenkov, general secretary of the Central Committee of the Communist party. On July 20 Stalin also assumed the post of Defense Commissar, formerly held by Marshal Timoshenko, and assumed direct control over the Commissariat for State Security. The elections to the Supreme Soviet scheduled for December, 1941, were postponed due to the war. See below for developments in 1943.

HISTORY

Premier Joseph Stalin in the course of his address to the Moscow Soviet on Nov. 6, 1942, on the 25th anniversary of the Soviet Revolution asked the question "whether the Anglo-Soviet-American coalition had a chance of winning the war in view of the organic defect which was capable of weakening and disintegrating the group?" The Russian Premier explained that the organic defect, to which he referred, "consisted of the heterogeneous elements with different ideologies which tended to prevent joint action against the common enemy." Stalin contended that the difference in ideologies and social systems composing the Anglo-Soviet-American coalition did not preclude the possibility and expediency of joint action against the common enemy "who holds out the threat of enslavement for them.

Premier Stalin's forecast of November, 1942, proved to be correct as the preliminary Russo-British and Russo-American agreements of May and June, 1942, respectively, paved the way for later and more extensive political and military rap-prochement between the three powers. This rapprochement became more of an actuality at the conference of Secretary of State Cordell Hull, Foreign Secretary Anthony Eden, and Foreign Commissar V. M. Molotov at Moscow in October and November, and of President Franklin D. Roosevelt, Prime Minister Winston Churchill, and Premier Joseph Stalin at Tehran in December. Premier Stalin did not attend the preceding conference of President Roosevelt, Prime Minister Churchill, and Generalissimo Chiang Kai-shek at Cairo when questions concerning joint action in the Pacific were discussed. However, China's Ambassador to Russia, Foo Ping-sheung, participated in the final stages of the Moscow discussions and China announced her adherence to the decisions reached.

Passing of Comintern. Aside from the effect of the phenomenal Russian victories over the German armies there were other significant developments during the year within Russia which helped pave the way for an understanding between the Union of Socialist Soviet Republics, and capitalistic United States of America and the British Empire. Of the various developments the most important, obviously, was the action of the executive committee of the Communist International ordering a dissolution of the organization's world-wide revolutionary activities. The action, taken apparently without prior consultation with its branches scattered over the world, was designed to facilitate cooperation between Soviet Russia and her allies in the war against Germany and Italy. In a statement ac-companying the dissolution order it was declared that "the forms, methods, and regulations of the Comintern had become obsolete and in some cases, had actually hindered the workers of the world in their battles against Germany."

The resolution of the executive committee was regarded by neutral observers in Moscow as an open admission that the Comintern which had stood for unification of the workers of the world under the Communist banner "should dissolve and get down to the job of beating Hitler." In explanation of the communist banner "should dissolve and get down to the job of beating Hitler." In explanation of the community of the communit tion of the committee's action it was stated that the war situation was so critical that there was no time for a formal convention such as had been held in the past. Many observers saw in the decision one of the most significant moves on Russia's side to obtain complete cooperation with the United Nations. In both Washington and London it was felt that the decision to dissolve the International in-dicated a realization in Moscow of the need of eliminating factional strife among labor groups which was handicapping the production of war material and embarrassing the war effort. The concluding paragraphs of the Moscow resolution, published on May 22, 1943, were as follows:

Taking into account the growth and the political maturity of Communist parties and their leading cadres in separate countries and also having in view the fact that during the present war some sections have raised the question of the dissolution of the Communist International as the directing center of the international working class

movement, the presidium of the executive committee of the Communist International, in the circumstances of the world war not being able to convene a Congress of the Communist International, puts forward the following proposal for ratification by the sections of the Communist International:

The Communist International, as the directing center of the international working class movement, is to be dis-solved, thus freeing the sections of the Communist Inter-national from their obligations arising from the statutes and resolutions of the congresses of the Communist Inter-

national.

The presidium of the executive committee of the Communist International calls on all supporters of the Communist International to concentrate their energies on the whole-hearted support of and active participation in the war of liberation of the peoples and the states of the anti-Hitlerite coalition for the speediest defeat of the deadly enemy of the working class and tollers—German Fascism and its associates and vassals.

The Moscow resolution meant, in practical effect, the passing of the Third International, which was formed as a result of an appeal by the Russian Communist Party in January, 1919. Fifty-one delegates, 31 of them plenipotentiaries, representing Communist groups in 30 countries met in Moscow on Mar. 3, 1919, and formed the Third International. At that time revolutions in Hungary, Bavaria, and Italy were brewing and it was thought that Germany was on the verge of communism.

A Second Congress called the following year was attended by 217 delegates from 41 lands. At this meeting decisions were made condemning extreme leftist tendencies and it was decided to work with parliamentary governments if necessary. Resolutions were adopted on agrarian and colonial questions, which were matters of special significance as there were present on this occasion delegates from Eastern and Far Eastern lands including China, Netherlands Indies, Persia, Korea, Turkey, and India.

The Third Congress, held in June, 1921, was attended by 605 delegates from 52 countries. A report of the meeting stated that since counter-revolutions had already begun to appear in Europe "it had become necessary for the Comintern to work out a strategy to counter the danger of attacks that European fascism would launch on the Soviet Union." The report declared that from that time onward the Comintern "was concerned less with the idea of fomenting world revolutions than with defending the interests of the workers against the still distant war and particularly of the Soviet Union, considered the true defender of the workers' interests against fascism." The statement was an indication that the Comintern, since the passing of Leon Trotsky, advocate of world revolution, had become to all intents and purposes an arm of the defense organization of the Soviet Union.

The Fourth Communist Congress was held in

Moscow in 1922, shortly after Mussolini came to power. Fifty-eight countries were represented on that occasion which was the last meeting to be attended by Lenin. Since revolutions had occurred in China, Poland, Bulgaria, and Germany, after the Fourth Congress the Comintern again began to take an interest in world revolutionary affairs, particularly in the Orient. The Fifth Congress in June, 1924, was attended by representatives of 49 nations, and the Sixth Congress in 1928 was attended by delegates from 57 countries who claimed to represent 4,000,000 Communists. The Seventh and last Congress was held in 1935.

Since the anti-Comintern Pact signed by Japan and Germany in November, 1936 (later adhered to by Italy) was directed primarily against Moscow, and was later expanded into a military alliance against the United States and Great Britain prior to Pearl Harbor (see Axis Powers), it was significant that Berlin greeted the Moscow declaration dissolving the Comintern as a "Russian bluff en-gineered by wire-pullers in the United States and Great Britain.

While the Russian move was regarded with suspicion in many quarters, sober opinion in both the United States and Great Britain viewed the move as a clear indication of Russia's unmistakable inclination toward the "right" or purely nationalistic viewpoint in its relations with other countries, as opposed to the earlier conception of promoting world revolutions and creating puppet Communist organizations within capitalist countries.

Final step in the dissolution of the Communist

International occurred in December when it was announced in Moscow that the "Internationale, the hymn of world revolution, had been displaced by a new national anthem, which glorifies "Great Russia of the Great Lenin and Stalin." The original Internationale was written by Eugene Pottier in France in 1871. The new hymn was selected in a competition of Russian artists in Moscow. (For text, see Anthem.)

Restoration of Orthodox Church. Next in significance to the dissolution of the Communist International was the restoration on September 4 of the rights and privileges of the Russian Orthodox Church and the official installation on September 12 of 78-year-old Metropolitan Sergius as Patriarch of all Russia. Sergius had remained in Russia throughout the period of the Revolution and had managed to hold the remnants of the Church together despite official prohibition and persecution.

The installation service, which had the approval of Premier Stalin, was attended by some 3,000 persons, including a considerable number of officials and men in army uniforms. The elaborate ceremony, which included the use of most of the ancient forms and elaborate ceremonial vestments, was accompanied by the lighting of thousands of candles which were placed before chosen ikons with appropriate prayers and music in the tradi-tional manner of the Orthodox Church.

The official announcement that the Government would place no obstacles in the way of the reorganization of the Church received front page prominence in all of the Moscow newspapers on September 5. The announcement and ceremonies were preceded by conferences between Patriarch Sergius, Premier Stalin, and Foreign Commissar Molotov in the Kremlin on September 4, at which plans were discussed for the election of a permanent Patriarch of all Russia and the reestablishment of a Holy Synod of Bishops as the supreme executive council of the Russian Orthodox Church. A statement by Premier Stalin expressing sympathy with the decision to call a Congress of Bishops of the Greek Orthodox Church indicated the intention of the Soviet Government to give the Church full facilities for carrying on its work. While it was un-derstood there would be no change in the constitutional provision which provided for freedom for both practice of religion and anti-religious propa-ganda, the fact that the "godless" campaign had been in abeyance for several months constituted evidence that a rapprochement between the Soviet State and the Orthodox Church had been decided upon.

It was recognized that the move also had political significance as an offset to activities of the Nazis, who had attempted to obtain the support of leaders of the Orthodox Church who emigrated from Russia at the time of the Revolution in 1917 and had remained with congregations in Germanoccupied territories. It was thought that the Moscow action would put an end to the Hitler hypocritical crusade for the "liberation of the Russian Church." A dispatch from Moscow in *The New York Times* on July 1 stated that all prelates of the Church who had deserted since the Revolution would probably be expelled from holy orders by Patriarch Sergius at the end of the war. Belief was also expressed that the restoration of the Orthodox Church would lead to an understanding with the Vatican, and possibly a concordat permitting freedom for Catholic schools and monastic orders in Russia.

The Church of England (q.v.) sent a delegation to Russia headed by the Archbishop of York in September for the purpose of coordinating church policy of the two countries during the war and during the process of rebuilding the peace of Eu-

rope following the war.

Further evidence that the move on the part of the Government to restore the Church was a serious one was the announcement in the newly-established Journal of the Orthodox Church and Moscow Patriarchy that a system of religious schools would be established throughout the Soviet Union for the purpose of training priests and clerics to carry on the Orthodox religion. It was emphasized, however, that while the Government was granting every facility for the reestablishment of the Church, it would have to be on a basis of complete separation of Church and State. It also was specified that students could not enter the church training schools until they had completed the courses in the State schools.

"Anti-God" Propaganda in Abeyance. The man who, more than any other, had been responsible for antireligious propaganda in the Soviet Union, Comrade Yemelyan Yaroslavski, died in Moscow in mid-December, his death occurring only a short time following the elaborate ceremony reestablishing the Orthodox Church which he had labored so long to eliminate. Yaroslavski was a faithful old-time Bolshevik who was highly regarded for his single-minded honesty of purpose in striving to uproot from the minds of the people all thoughts of the old wealthy, once dominant and politically corrupt church which had served to bolster up the decadent Czarist empire. The Soviet Government did its part by confiscating most of the property of the old Orthodox Church while Comrade Yaroslavski, using the slogan "Religion is the Opiate of the People," attempted to uproot its influence from the minds of the populace in accordance with the athesistic concepts of Marxian socialism.

istic concepts of Marxian socialism.

But while the "anti-God" literature was widely read and "anti-God" slogans were to be seen on all sides, he was not successful in eliminating religion from the minds of the people, even the younger generations who had been brought up under the influence of communist teachings. Thoughts of religion always become more pronounced in time of war, particularly the type of war of survival which has prevailed along the Russo-German fronts which has afflicted every man, woman, and child in the land. Many of the people still attended church even though the front doors and windows were boarded up and it was necessary to slip in through the back door, or in cases where the church had been destroyed, to seek out some humble structure on a side street or alleyway where a faithful priest still held forth despite the ridicule of the anti-God

propagandists.

The way for the reestablishment of the Orthodox Church was paved dramatically by the aged Patriarch Sergius, who demonstrated the patriotism of the Church by raising substantial funds for the Russian war effort, the donation taking the practical form of purchase of a tank unit. The action took place long before the Government's decision to permit reestablishment of the Church became known.

Since there had been severe foreign criticism of the Soviet leaders on the score of their anti-religious policies, a report concerning the granting of religious freedom to the Poles aroused deep interest in the United States. President Roosevelt, at a press conference at the White House in May, 1943, referred to the Moscow report and stated that the "status of religion in Russia was the same as in the United States." He then referred to Article 124 in the Russian Constitution which reads, "Freedom of religious worship and freedom of anti-religious propaganda is recognized for all citizens."

Religious Freedom in Russia. The President's statement aroused considerable controversy due to the knowledge that the Russian Constitution was still in the "paper document" stage and that even the clause referring to freedom of religion was written in such a way as to give the impression of granting freedom of religion in theory while at the same time openly permitting and encouraging antireligious propaganda under official auspices. As a result of the discussion stirred up by the President's statement, it was brought out that the American "Lend Lease" emissary in Moscow, Averill Harriman, had been trying to "persuade" Stalin to change his attitude on religion. It was indicated that the Russian attitude on religion constituted a strong and almost insuperable bar to a full rapprochement between the United States and the Soviet Union.

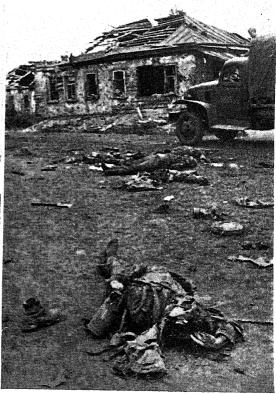

According to an article in *The New York Times* on May 27 the belief prevailed that the officially sanctioned trip of Archbishop Francis J. Spellman of New York to Europe, Africa, and the Near East, had as one of its objectives the restoration of normal relations between Soviet Russia and the Vatican. It was regarded as significant that the Vatican had held special ceremonies following Archbishop Spellman's visit "to hasten Russia's return to the true faith," the occasion being the 300th anniversary of the sainthood of the Russian martyr, St. Josphat.

It also was announced that the Vatican radio had inaugurated broadcasts in the Russian language, the first program stressing the value of prayer and characterizing the war as "probably history's greatest punishment for the world . . . entire peoples have become over-proud . . . when people abandon religion and honesty, disorder begins." The Vatican announcement stated the Russian broadcasts would continue and would include general religious themes and religious news relating to the Soviet Union.

Normalcy in Foreign Service and Army. Other developments in the Soviet Union indicative of the trend toward traditionalism in form and, in consequence, bringing the country into more definite accord with the western world, included significant changes in both Army and Diplomatic Services. In accordance with an order published in June, all diplomatic officials from ambassadors to attachés were to be attired in formal uniforms such as had not been worm by representatives of Russia since the days of the Czars. Similar uniforms were also decreed for all members of the newly-established career diplomatic service connected with the Foreign Commissariat in Moscow. The new career diplomatic service was to have 11 ranks ranging from ambassador to attaché, amounting to the creation of a hierarchy and permanent civil service in the diplomatic branch. Previously the diplomatic branch, like the

## THE TASK OF REBUILDING

The Russians return to devastated homes and industries in their reconquered territory. Above: A street in Kharkov after the German retreat (Sovfoto). Right: The lone inhabitants of a small village who remain to greet the returning Red Army (U.N.I.O.). Below: The ruins of the Kharkov tractor plant (Sovfoto).

officers' group in the Army, was staffed largely by men who did patriotic service in the Revolution or

had served the Party faithfully since

The change in organization of the Red Army was equally pronounced. Originally it was almost impossible to distinguish an officer from a private as the uniforms were practically similar and there was no class distinction between officers and men. The exigencies of war made it necessary to introduce rigid discipline in the Army and restore the old-time officer ranks up to that of Field Marshal, which was held by the commander-in-chief, Premier Stalin himself. The Army was now headed by an elite Guard as of old and special officer schools were inaugurated. The decree of Oct. 10, 1942, curtailing the powers of the so-called political commissars in the Army was strengthened in 1943 by the total abolition of the Commissars and substitution of political workers or teachers subject to orders of Red Army officers. The new officer training schools, nine in number and known as the Suvoroff Schools, admitted boys from 8 to 17 and were boarding schools similar to those before the Revolution. They were maintained at State expense and priority was given to the sons of officers.

Back to Nationalism. These developments indicated a definite trend away from the doctrines symbolized by the fellow-traveler attired in a worker's shirt which had characterized the country since the Revolution. Perhaps of even more significance was the gradual emergence of the membership of the Communist party, now numbering some 4,000,-000, as the new ruling "white collar" aristocracy of the country. Attention has been called to the interesting coincidence that membership in the Party corresponds roughly to the number of the old intelligentsia or ruling class which emigrated from the country as a result of the 1917 Revolution.

There were indications of the development of a "new capitalism" within the socialistic framework as evidenced in purchases of war bonds of respectable amounts by individuals and groups since the beginning of the struggle with Germany. Many of the heaviest contributions to war bonds came from the directors of collective farms, who bene-fited materially from the war effort. The inauguration of piece work in the state-owned factories and mines several years before did much to stimulate production for peace as well as war and also established the principle of differentiation in pay and income among both factory workers and farmers. A Moscow report in June stated that outstanding farmers and workers were permitted to maintain private homesteads, whereas earlier practices of Russian communism forbade the ownership of private property with the exception of personal belongings.

The London Economist, well informed on economic conditions in Russia, said there was evidence of "very large savings among collectivized peas-

ants." The article continued:

There can be little doubt that the war has accelerated the reemergence of high-income groups among the collectivized peasantry. It has not been possible to gauge the extent of this significant development, nor to form any opinion about the degree to which the high-income groups in the countryside have crystallized into anything like solid social

countryside have crystallized into anything like solid social layers.

Judged by the wages paid in a number of big metal factories, the lower categories of earnings have been of the order of 300 rubles a month. Some 8 to 12 per cent of the workers in those factories earn more than 1,200 rubles, whereas the earnings of some Stakhanovites (highly productive workers) amount to more than 4,000 rubles. The salaries of the technical staff in the same group of factories vary from 1,000 to 5,000, 6,000, and more rubles.

The influential Moscow Communist labor publication, War and the Working Classes, published editorials in the closing weeks of the year severely criticizing labor union officials in the United States and Great Britain "who incited strikers and mislead workers into unpatriotic acts which impeded the war effort."

The January, 1943, issue of International Conciliation, organ of the Carnegie Endowment for International Peace, published a compilation of documents indicating that the Soviet Union "may now be considered to have abandoned its original aim

of world revolution.

Co-education Discontinued. There was a further revolutionary development on July 16, 1943, when the government issued a decree introducing separate education for boys and girls in the high schools of large cities and industrial centers. Coeducation was continued temporarily in the primary schools and in rural districts where the number of students does not justify a separation of the sexes. The new order went into effect at the opening of the school year on September 1.

The announcement aroused widespread interest due to the insistence of Party authorities from the beginning of the Revolution in 1917 upon the absolute equality of the sexes even to the extent

of military service.

The real incentive for the change was revealed later in the discussion when it was stated that tests carried out in the Moscow schools in 1942 indicated that in the higher grades (fifth to tenth) separate education had resulted in a higher level of military and physical training and a better order of school life and better discipline."

Dispatches from the Moscow correspondents stating that it was decided to adopt different educational programs for boys and girls during 1944, the secondary education for boys specializing on technical subjects so that on leaving school the boys would know how to repair simple electrical installations and household articles and read maps, while the girls would be trained in pedagogy handicrafts, domestic science, personal hygiene, and care of children. More attention was also to be paid to Russian history and classical literature. The to Russian history and classical literature. Government on December 28 ordered the starting age for compulsory education reduced from eight to seven years.

Reconstruction. The Council of People's Commissars and the Central Committee of the Communist Party published on August 22 the text of a comprehensive reconstruction program, much of which related to emergency rebuilding of liberated areas. The plan provided for the immediate return of 200,000 cattle, 350,000 sheep and goats, and 55,000horses to certain liberated areas of both north and south Russia. It called for the reconstruction of tractor stations, accumulation of gasoline supplies and replacements, restoration of railways, railway stations and other emergency railway buildings as well as barracks for railway workers, and the building of apartments and houses for the returning population, particularly for those living in dugouts and ruined buildings. The Government urged the use of reclaimed building materials and other materials to be found on the spot. The Army was instructed to supervise the reconstruction program so that the work could be speeded up and to avoid burdening the rest of the country.

An idea of the extent of the reconstruction necessary and its urgency was provided in a report of foreign correspondents who visited Kharkov following its deliverance by the Red Army after two German occupations. Once a bustling industrial city of 925,000 people, it now had a population of 300,000. It was estimated that 50 per cent of the buildings were unsuitable for occupancy and 20 per cent of the remainder required capital repairs. Of the city's 430 prewar large and medium factories, previously employing 300,000 people, not one was in operation. The gas and water systems had been destroyed and the electric plant was only able to serve part of the city. Of the 135 schools, 72 had been destroyed and only ten of the previous 27 hospitals remained. Before the war Kharkov had 16 street car routes all of which were torn up by the Germans. Two or three lines had since been restored.

Of the original population, a considerable number had been evacuated along with factory machinery and materials to the Urals. Thousands of others had fled before the German advance leaving about 450,000 in the city at the time of the Nazi occupation. Of these some 100,000 died of disease and starvation, another 100,000 laborers were sent to Germany and some 30,000 lews were executed.

to Germany and some 30,000 Jews were executed. Conditions in another city, Orel, were similar on a somewhat smaller scale. Orel was under German occupation for 22 months. Of the original population of 114,000 only 30,000 were there when the Soviet Army returned. About 10,000 had fled before the German arrival in October, 1941. Of those remaining some 12,000 of the civilian population were killed by the Germans and about 14,000 sent to Germany to work. Of those left, numbering about 75,000, large numbers died, were evacuated or escaped to other parts of the country. The 30,000 who remained were forced to live in cellars where they subsisted on a half pound of bread daily.

A sidelight on the serious labor problem involved in the reconstruction program was provided in a report in April stating that much of the work would fall on women. This was particularly true in agriculture where 14,000 collective farms were headed by women with more than 40,000 women section superintendents. It was stated that some 2,000,000 women had received special agricultural training in preparation for reconstruction of farming areas. Much of the farm machinery and seed grain in the occupied areas which had been buried by the farmers to prevent seizure by the Germans, could be salvaged, stated the report.

A survey of agricultural conditions published in the journal Socialist Agriculture in June stated that the country was still suffering from the poor crops of 1942 and the deficiency resulting from the German occupation of the Ukraine and Caucasus where most of the crops had been destroyed. Despite the extensive use of women labor the shortage of man power was felt throughout the agricultural areas. It was admitted that women could not operate the tractors and other machinery with the efficiency of the men who had been technically trained for the purpose.

Some idea of the reconstruction problem in Russia's industrial areas which were liberated in the middle and latter half of 1943 was provided in published statistics showing that the liberated Donbas area before the war produced 88,000,000 tons of high grade coal or about 54 per cent of the country's total. Only a few of the smaller mines in the district had been restored. Most serious are the problems involved in reconstructing the industries of Kharkov, Mariupol and other liberated Ukrainian areas as well as the engineering works in the Bryansk district. In most cases even the buildings had been razed. Among the important industries which were wrecked are the great locomotive works at Voroshilovgrad, the tractor and

machine tool works at Kharkov, farm machinery plants at Osipenko on the Sea of Azov, and various important engineering plants in Novorossiisk. The Russians had recovered from the Germans up to the end of the year most of their major industries excepting the manganese and iron ore areas of Nikopol and Krivoi Rog. In recapturing Orel and Kursk Provinces the Russians had regained much of their richest farming land, including tobacco and beet sugar districts. However, most of the tobacco curing plants and sugar refineries in the district had been destroyed by the Germans.

The Government announced on July 7 that a new oil field had been discovered in Azerbaijan which was expected to become second to the famous Baku

fields.

Ural Plants Saved Country. The fact that the country was able to survive the Nazi occupation of its most developed agricultural terrain and industrialized cities was attributed to the Government's foresight in developing alternative industrial centers in the Urals and beyond, even in the Lake Baikal district of Siberia. Had it not been for these subsidiary industrial bases the German occupation of the Ukraine and Domhas might have been fatal.

Ukraine and Donbas might have been fatal.

Adm. William H. Standley, U.S. Ambassador to Russia, made a tour of the Ural industrial areas in July and testified to the effective work which was being done. He inspected three of the country's largest industries, located in the Ural area, two producing tanks and the third steel. One plant produced almost everything going into a tank from guns to rubber. He said that the steel plant compared favorably with plants in the United States. He also reported seeing large fields of potatoes and other crops located on State farms in the Ural area. The Ambassador visited the well-known industrial cities of Sverdlovsk, Chelyabinsk, and Magnitogorsk while on the trip. It was reported at the time that two new open-hearth furnaces and a steel rolling mill had been opened in the Ural area, the furnaces being located at Nizhni, Saldinsk, and Novo Tagil and the steel mill at Kuznetsk.

Ural-Siberian Boom. The shifting of population and industries to the Ural and Western Siberian areas produced a boom, the like of which had never before been experienced in the Soviet Union, according to accounts in the Moscow papers. Emelyan Yaroslavsky, well-known Communist writer, attributed the prosperity now prevailing on Russia's undeveloped frontier to Stalin's long-range planning but regardless of the reason, his figures were significant. Production had increased three-fold since the outbreak of the war, while some factories had increased their production as much as seven and a half times in the same period. The expansion at the industrial town of Nizhni Tagil was 300 per cent according to the Soviet writer. The heavy metallurgical center in the North Urals presented a thrilling picture with great new buildings dwarfing the old ones. The loss of Krivoi Rog in the Ukraine and the Donetz Basin were responsible for the new prosperity in the Urals. The writer urged the Government to take steps to adjust the social and cultural life of the increased population, "otherwise a serious social problem would develop." He said that serious problems of housing, transport, and electric power had developed at such cities as Molotoff, Sverdlovsk, Chelyabinsk, Zlatoust, Magnitogorsk, Serov, and other centers of swollen popu-

It was claimed that nowhere else in the world had nature been so bountiful as in the 2,500-milelong "spine" of the Urals where immense supplies of minerals were being developed including iron ore, copper, nickel, chrome, manganese, magnesium

salts, bauxite, asbestos, graphite, coal, and oil.

The industries in the Ural district reported an increase in production for 1943 of more than 50 per cent over 1942, according to a year end report to Premier Stalin by 1,605,152 workers and residents of the Sverdlovsk district. The workers promised a further 20 per cent increase in production for 1944. Among the details was an account of one girl who turned out 300,000 shells above the quota. In the Sverdlovsk district the capital investment was increased 1,500,000,000 rubles in 1943. Ten open-hearth furnaces, four mines, and two coke batteries were built. There also was large scale housing construction. One collective farm produced 540,000 pounds of corn, and 1,116,000 pounds of potatoes, and reported it had sent many cows, sheep, and pigs to liberated areas.

Little has been said about developments in Siberia, possibly because of a fear of stirring up the Japanese, but it was known that industrial development in that area, even at Sakhalin and Kamchat-ka, was also taking place. There was a report in April that Moscow was sending colonists to northern Sakhalin and that one of the new industries to be established was a stock farm. Northern Sakhalin produced large quantities of oil, practically all of which was sold under contract to the Japanese

Navy.

A report in the business sections of the New York papers early in the year told of the first auction sale of Russian Siberian furs to be held in New York in many years. Nothing was said about how the furs were transported to the United States but it was suggested they had arrived by the new Soviet steamship line connecting Portland and Vladivostok or possibly by air express over the new air line operating across Bering Sea from Alaska to Siberia. Both governments maintained secrecy about the new air service, which following the war was expected to become one of the world's leading air routes. A report from Edmonton, western Canada, at the southern end of the new Alaskan Highway stated that Russian pilots, including women, were to be seen along the highway piloting trans-port planes carrying lend-lease goods in both directions across Bering Strait.

U.S.S.R. and U.S.A. in the Fur East. The Cairo and Tehran Conferences and the progress of the war against Japan in the Pacific tended to bring into prominence numerous questions involving the future relations of the United States and the Soviet Union in the Far East. While Japan and Russia continued their policy of neutrality, events in the final months of 1943 indicated that important changes might be in prospect. The decision reached at Cairo to strip Japan of her colonies was of vital interest to Russia as two of these territories, Manchuria and Korea, adjoin Russian Siberia in the Far East. The restoration of Manchuria to China would also bring into prominence the question of Russian interests in Mongolia and Sinkiang, both of which territories also adjoin the Soviet Union. Russia has extensive economic interests in all of these Far

Eastern territories.

Walter Duranty, recognized authority on the Soviet Union, in an article written for the North American Newspaper Alliance (see the New York Times, Feb. 7, 1943) suggested the possibility that in the final settlement of war issues Russia might be more deeply concerned with developments in Asia than in Europe. Duranty suggested that the Soviet Union might want "an independent Soviet Republic of Manchuria, a similar republic of Korea and even perhaps the northwestern Chinese Soviet Republic of Sinkiang, . . . and last but not least, Russia wants the Liaotung Peninsula of South Manchuria, the lost fortress of Port Arthur and the Port of Dalny (Darien). . . . That is what the Russians want, the control of the West Pacific, that is, the China Coast . . . the Russians are going to build up there in the Burry River Basin north of Blagoveshchensk a new and bigger steel town, a second Pittsburgh, and, with Port Arthur and Dalny the Russians will rule Northwestern Asia.

In view of these traditional Russian leanings toward the Far East, Duranty declared that "as soon as German pressure upon the Soviet Union had been reduced below the danger point to the Soviet Union, and as soon as the United States is able to put a powerful force of airplanes-1,000 or more firstline planes—with ground crews, high octane gas and equipment of various kinds into the Pacific Maritime Province, that is Vladivostok, then the Russians will cooperate in our death stroke against Japan.

Maurice Hindus, another authority on Russia, expressed similar views (New York Herald-Tribune, Feb. 12, 1943) concerning Russia's interest in Asia.
"It should," he wrote, "be kept in mind that Russia is the most powerful nation in Asia . . . Not even Japan can now match the heavy and machinebuilding industry which Russia possesses in the Urals, Siberia and in Central Asia."

UNITED KINGDOM COMMERCIAL CORPORATION. A commercial agency, established by the British Government in April, 1940, to counter German economic penetration into the Balkans and Southeastern Europe. It functions as an independent entity, although financed by the Government and subject to Government control over the broad lines of its policy. Originally it was designed to assist British traders to compete more effectively with the German methods of using investment and trade as instruments for the extension of political control. However the German occupation of the Balkans in the spring of 1941 and the critical position of the British cause throughout the Middle East forced the Corporation greatly to broaden its powers and functions and enter upon vast operations wholly beyond the scope or ability of private enterprise.

Its first great undertaking was to enable Turkey to withstand German economic pressure. Assuming control of all British trade with Turkey (except in chromite and tobacco), the Corporation supplied the Turks with essential imports and made largescale purchases of export surpluses. This action helped to maintain the Anglo-Turkish alliance and sustain Turkish neutrality during the most critical period of the war. In 1942 Turkish imports from the sterling area were four times those obtained

from the United Kingdom in 1938. The Corporation thus averted a disastrous setback to Turkish foreign trade. It also provided new export markets for British goods in Turkey, guaranteed sale of the goods through Treasury backing, and organized the shipping in which the goods were moved. The Corporation's purchases in Turkey between March, 1941, and September, 1942, totaled some £9,000,000, while its sales of goods from the sterling area during the same period were £8,500,000. See

Turkey under *History*. Meanwhile the Corporation had assumed vast new responsibilities. It became the executive agent of the Middle East Supply Center (which see). In this capacity it gradually developed into a universal source of supply and a clearinghouse for surplus products of the countries and colonies throughout that region. Within two weeks after the German invasion of Russia, the Corporation was assigned the task of supplying Russia with all civilian requirements from the sterling area. In addition it undertook to accumulate reserve stocks of strategic supplies for the British Government, to execute bulk sales and purchases abroad wherever this was deemed necessary to implement the Government's policies, and to facilitate the British export trade in other ways consistent with the nation's war interests.

After America entered the war, the U.S. Government became a co-member of the Middle East Supply Center and established the U.S. Commercial Corporation, modeled after the UKCC, to perform similar functions. Thereafter the two Corporations worked closely together, through their London and New York headquarters and in the field. In collaboration with the Lend-Lease Administration and other British and American war agencies, they carried out the Middle East Supply Center's plans for conserving shipping, countering Axis politico-economic warfare, and developing that region as a supply base for Allied armies. In Turkey, Portugal, and Spain they coordinated Anglo-American sales and purchases in support of their governments' diplomatic aims and in order to deprive the Axis of Turkish chrome, Portuguese tungsten, and other strategic materials. As agents of their respective governments, they supported the economies of the Fighting French and Belgian colonies in West Africa, and helped to sustain the trade of the French North African colonies after the Anglo-American landings of Nov. 8, 1942.

In supplying Russia's civilian requirements from the sterling area, the UKCC played a leading part in organizing the transportation of supplies across Iran to the Soviet Union. It operated the railway-highway route from Karachi, India, to Caspian Sea ports via Meshed, and all motor transport services from the Persian Gulf ports of Bushire and Andimeshk. The Corporation trained 8,000 Iranians to maintain and operate the thousands of trucks used in these services. Its agents in India, Ceylon, and other Middle Eastern territories purchased thousands of tons of rubber, jute, graphite, tea, etc., for shipment to the Russians. This great supply job was carried on under the direction of the Allied Supplies Executive and in cooperation with the Soviet Trade Delegation in London.

the Soviet Trade Delegation in London.

The Corporation achieved its most important and permanent results in carrying out the economic plans of the Middle East Supply Center. It intervened successfully to avert the threat of famine and spreading economic chaos arising from the war, drought, and locust plagues. This was done by conserving shipping space for foodstuffs and other essential supplies, by bulk purchases in East

Africa and other regions of surplus food production for resale in deficiency areas, and by encouraging production by assuring markets at profitable prices. The Corporation provided raw materials and equipment for the expansion of manufacturing production, especially in Palestine, and found markets for the resulting articles. Tanning materials from Turkey and surplus hides from East Africa and the Sudan were shipped to Iran and Palestine for use by leather factories working on UKCC contracts for boots for the Russian and Turkish armies. With UKCC financial and technical aid, plants were erected in various parts of the Middle East which eliminated the need for imported fertilizer, batteries, margarine, etc.

The success achieved by these large-scale, integrated commercial operations in meeting the economic needs of the Middle Eastern countries and opening new fields for British trade and investment, led the President of the Board of Trade to assure Parliament early in 1943 that the UKCC's operations would be continued after the war. Acting chairman in 1943, Sir Francis Joseph. See IRAN

and Palestine under History.

UNITED MINE WORKERS (U.M.W.). See COAL; LABOR CONDITIONS under Labor Movements; NATIONAL WAR LABOR BOARD.

UNITED NATIONS. A coalition of nations engaged in war with Germany, Japan and the lesser Axis states. Twenty-six nations signed the original Declaration of solidarity and unity of purpose at Washington on Jan. 1, 1942 (for text of the Declaration and steps antecedent thereto, see 1943 Year Book, pp. 703–4), and Ethiopia, Mexico, and the Philippines signed the Declaration later in the year. In 1943, the total rose to 33 by the signatures of Iraq (January 16), Brazil (February 8), Bolivia (May 5), and Iran (September 10).

Though widely hailed as the nucleus out of which general and permanent postwar organization would develop, the United Nations Declaration failed to produce any organization of machinery during 1942. The year 1943 saw a slow but gratifying development of United Nations Conferences, a first working United Nations organization, and tentative agreements to hold further conferences on specific subjects. Even more important was the assurance contained in the Declaration of Moscow (see text later in this article) that the four signatory states were determined to establish after the war a general international organization for the maintenance of international peace and security. While membership would not necessarily be limited to the United Nations, in practice it would be initially a United Nations organization.

# United Nations Conferences

Food and Agricultural Production. The first United Nations conference of any kind dealt with long-range and postwar problems of food production, marketing, and nutritional standards. With the United States as host it held sessions at Hot Springs, Virginia, from May 18 to June 3, 1943. Among categories of questions considered were: (1) plans of various countries regarding production, import requirements, or exportable surpluses of foodstuffs, (2) possibilities of international action to improve national policies concerning consumption and nutrition, (3) possibilities of establishing international agreements and institutions to pro-

mote efficient production and an equitable distribution of food supplies and other agricultural products, and (4) necessary commercial and financial arrangements to enable countries to obtain needed agricultural products and to maintain adequate markets for their own surpluses.

The conference was attended by delegations from all the United Nations and from all the states associated with them (i.e., those which had severed diplomatic relations with the Axis but which had not declared war), a total of 44 in all, including representatives of the French National Commit-

tee.

A general harmony of views prevailed throughout the conference sessions. A final act was adopted, containing a general declaration and 32 specific resolutions dealing with virtually all aspects of the classes of problems listed above. (For text, see the Department of State Bulletin, Vol. VIII, No. 208, June 19, 1943 or International Conciliation, No.

392, September, 1943.)

The Interim Food Commission. Probably the most important act of the Hot Springs Conference was the establishment of an Interim Commission, with one representative from each participating government or authority, to prepare and recommend to the constituent governments for adoption (1) a formal international declaration or agreement whereby each signatory would obligate itself to carry out the policies agreed upon at the conference, and (2) a specific plan for a permanent international organization in the field of food and other agricultural production and distribution. This Interim Commission was established in Washington where it began active work on this dual assignment.

United Nations Relief and Rehabilitation Administration. More urgent was the problem of providing relief and rehabilitation measures for the civilian populations to be freed from Axis rule. A United States agency for this work had already been created (see Relief and Rehabilitation), and the next step was to secure a United Nations agreement establishing an international agency to organize the administration of relief on a world-wide basis. During the summer of 1943 agreement on the constitution of such an agency was reached, and the signatures of the 44 United Nations and their associates were affixed at a ceremony in the White House on November 9. Thereafter, the delegates adjourned to Atlantic City where they remained in conference until the end of the month developing plans for the financing of relief and creating further machinery for its administration.

As a result of the UNRRA agreement and the decisions reached by the Atlantic City conference, the administrative mechanism of this new United Nations agency was projected as follows. The governing body, called the Council, consists of one representative of each member state. It is to meet at least twice a year in regular session and may be convoked for special purposes whenever necessary. Decisions are normally to be made by majority vote. Representatives of the United States, Great Britain, the Soviet Union, and China are to constitute a guiding Central Committee to take emergency decisions, to call special sessions of the Council, etc. The third important part of the organization is the Director General who as chief administrative officer is to be appointed by the Council on recommendation of the Central Committee. He presides over sessions of the Central Committee but may not vote.

Herbert H. Lehman, former Governor of New York, was appointed as the first Director General of the new organization. Four working committeesthe Committee on Supplies, the Committee on Financial Control, the Committee for Europe, and the Committee for the Far East—were established. It is interesting to note that while the Council may amend most portions of the UNRRA agreement by a two-thirds vote, it can change those dealing with the composition of the Council and the position of the Director General only if favorable votes are cast by all members of the Central Committee. (For text of the UNRRA agreement, see Department of State Bulletin, Vol. IX, No. 222, Sept. 25, 1943, or International Conciliation, No. 392, September, 1943.)

### Conferences of Principal United Nations

More numerous, more dramatic, and of more immediate political and military significance were the meetings between high officials of the leading United Nations for the purpose of furthering the joint war effort and of establishing a basis of agreement for the peace settlements to follow. As the year went on, these meetings increased in frequency and in the significance of their accomplishments. It seemed as if a firm basis for future collaboration were in process of establishment. Of special importance in this connection was the growing willingness of the highest officials of the Soviet Union to join their British and American colleagues in these meetings.

The Casablanca Conference. From January 14-26 President Roosevelt and Prime Minister Churchill conferred at Casablanca, French Morocco. As the conference was predominantly a military affair, both men were accompanied by their highest military advisers and experts. Thus, the United States delegation included Gen. George C. Marshall, Adm. Ernest J. King, Lt. Gen. H. H. Arnold, Lt. Gen. B. B. Somervell, and many others. The British of the ish officials were the late Adm. Sir Dudley Pound, Gen. Sir Alan Brooke, Air Chief Marshal Sir Charles Portal, Field Marshal Sir John Dill, Adm. Lord Louis Mountbatten, Lt. Gen. Sir Hastings Ismay, and numerous other officers. Among civilian officials accompanying President Roosevelt were Harry Hopkins, chairman of the British-American Munitions Assignment Board, and W. Averill Harriman, then U.S. Defense Expediter in England. Lord Leathers, British Minister of War Transport, accompanied Mr. Churchill. The final communiqué of the conference made it clear that Premier Stalin had been invited to attend the meeting, and that both he and Generalissimo Chiang Kai-shek had been fully apprised of the decisions taken.

Apart from military decisions, to which, naturally, no publicity was given, the chief result of the conference was the agreement reached by President Roosevelt and Mr. Churchill that the war against the Axis states would be terminated only on the basis of "unconditional surrender" by the latter. Peace was subsequently made with Italy on this basis, and the Soviet Union adopted the principle with respect to the surrender of Germany when it became a party to the Moscow Declaration. The term apparently meant that surrender would not be a result of a bargaining process, but that the defeated state must throw itself completely upon the mercy of the victors, agreeing to comply with whatever conditions and terms the latter might subsequently determine and impose.

The Quebec Conference. Prime Minister Churchill (who had conferred at the White House with the President in May) and President Roosevelt met at Hyde Park in August to continue their discussions. Together with substantially the same military advisers and staffs as had attended the Casablanca

Conference, they then adjourned to Quebec where from August 11–24 they renewed their examina-tion of war plans. The added presence of Secretary of State Hull and Foreign Secretary Eden indicated that political as well as military matters were under discussion. As the host to the conference, Prime Minister W. L. Mackenzie King took an active part in the deliberations. The joint communiqué stated that much of the military discussion had turned upon the war against Japan, and that Dr. T. V. Soong, as the representative of Generalissimo Chiang Kai-shek, had participated in the talks. Following the end of the Quebec conference, Mr. Churchill returned with the President to Washington for further discussions.

The political results of the Quebec Conference were foreshadowed by the final sentence of the communiqué which stated that consideration had been given to the question of relations with the French Committee of National Liberation, and that an announcement by a number of governments soon would be made. On August 26, the White House released the promised statement of American policy and the British Government made a similar, though rather less reserved, statement (see

FRANCE and GREAT BRITAIN under History).

The Moscow Conference. The increasingly close cooperation between British and American officials, manifested at these conferences and by the repeated Washington visits of Prime Minister Churchill, had not yet been accompanied by the development of the same collaboration with Soviet officials, and there was some popular apprehension in Britain and America lest Premier Stalin and his advisers had determined to go their own way in waging war and in making peace. This atmosphere was improved measurably when it became known that the three foreign ministers, Hull, Eden, and Molotov, had agreed to confer in Moscow. This meeting, which took place from October 19-30, was primarily political in character although each govern-

ment had a high military official in its delegation.

The American representatives, headed by Secretary Hull, included W. Averill Harriman, recently appointed Ambassador to the Soviet Union, Maj. Gen. John R. Deane, Green H. Hackworth, Legal Adviser to the Department, James C. Dunn, Political Adviser on European Affairs, and a number of other officers of the Department to serve as experts. The British delegation consisted of Anthony Eden, Ambassador Sir Archibald Clark Kerr, William Strang, Lt. Gen. Sir Hastings Ismay, and a staff of experts. The Russian participants included V. M. Molotov, Marshal K. E. Voroshilov, A. Y. Vyshinski, Maxim Litvinov, and expert advisers.

Four Declarations of fundamental importance were agreed upon at the conference. The first of these, the Declaration on General Security, is such an epoch-making document that it is reproduced textually herewith:

The Governments of the United States of America, the United Kingdom, the Soviet Union, and China: united in their determination, in accordance with the Declaration by the United Nations of Jan. 1. 1942, and subsequent declarations, to continue hostilities against those Axis powers with which they respectively are at war until such powers have laid down their arms on the basis of unconditional surrender; conscious of their responsibility to secure the liberation

conscious of their responsibility to secure the liberation of themselves and the peoples allied with them from the

of themselves and the peoples affect with them from the menace of aggression; recognizing the necessity of ensuring a rapid and orderly transition from war to peace and of establishing and maintaining international peace and security with the least diversion of the world's human and economic resources for armaments;
jointly declare:

1. That their united action, pledged for the prosecution

of the war against their respective enemies, will be con-

tinued for the organization and maintenance of peace and

security.

2. That those of them at war with a common enemy will act together in all matters relating to the surrender and disarmament of that enemy.

3. That they will take all measures deemed by them to be necessary to provide against any violation of the terms

the necessary to provide against any violation of the terms imposed upon the enemy.

4. tional peace and security.

5. That for the purpose of maintaining international peace and security pending the reestablishment of law and order and the inauguration of a system of general security, they will consult with one another and as occasion requires with other members of the United Nations with a view to joint action on behalf of the community of nations.

7. That they will confer and cooperate with one another and with other members of the United Nations to bring

and with other memoers of the United Nations to bring about a practicable general agreement with respect to the regulation of armaments in the postwar period.

V. MOLOTOV ANTHONY EDEN CORDELL HULL Moscow, 30th October, 1943 FOO PING-SHEUNG

It will be noted that although the Chinese did not take an active part in the conference—which was natural in view of the fact that Russia was not at war with Japan-they were invited to become co-signatories of this momentous declaration. Also, of special significance is the self-denying ordinance in Point 6 by which each state agreed to a drastic limitation of the use of its military, naval, and air forces in the postwar period. This was apparently designed to give special assurance to all small neighboring states who might otherwise have feared that these powerful states, possessing a near-monopoly of the world's military power at the end of the war, might use that power to establish an unpalatable world hegemony.

Declaration Regarding Italy. The second Moscow Declaration dealt with the policy of the three states toward Italy. After laying down the general principle that "Fascism and all its evil influences and emanations should be utterly destroyed and that the Italian people should be given every opportunity to establish governmental and other institutions based on democratic principles," the agreement went on to state that (1) the Italian Government should be made more democratic by the inclusion of anti-fascist elements, (2) freedom of speech, worship, political belief, the press, and public meeting should be restored, (3) institutions and organizations of the Fascist regime should be suppressed, Fascist elements removed from all public institutions and organizations, political prisoners of the Fascist regime released, and Fascist chiefs and other persons known to be war criminals arrested. Finally, the right of the Italian people ultimately to choose their own form of government was affirmed. (The texts of all the Moscow declarations may be found in the Department of State Bulletin, Vol. IX, No. 228, Nov. 6, 1943).

Declaration on Austria. The third Moscow declaration stated the policy of the three powers toward the future of Austria. The annexation to Germany of March, 1938, was declared to be null and void, and the powers promised that they would liberate Austria so that it could be reestablished as a free and independent state. Much speculation was aroused by the additional statement that this step would "open the way for the Austrian people themselves, as well as those neighboring states which will be faced with similar problems, to find that political and economic security which is the

only basis for lasting peace." No official explana-tion was given as to the reason for this reference to other states.

Declaration on German Atrocities. The first three documents were the product of the meeting of the three foreign secretaries. The fourth document, though issued at the conference, was signed by President Roosevelt, Prime Minister Churchill, and Premier Stalin. It gave a solemn warning that at the time of the granting of any armistice to Germany, German officers and men, and Nazi party members, who had been responsible for the atrocities perpetrated upon the peoples of the occupied countries, would "be sent back to the countries in which their abominable deeds were done in order that they may be judged and punished according to the laws of these liberated countries and of the free governments which will be created therein." After promising that the guilty parties would be pursued "to the uttermost ends of the earth," the declaration concluded with the assurance that major criminals, "whose offences have no particular geographical localization," would be punished by the joint decision of the Allied governments.

Agencies Created by the Moscow Conference. Two coordinating agencies were established by the three governments. The first of these was the Advisory Council for matters relating to Italy. It was com-posed of representatives of the three powers, plus a representative from the French Committee of National Liberation, and provision was made for the eventual inclusion of Greek and Yugoslav representatives as well. The Council was to deal with nonmilitary matters entirely and was to make recommendations to the respective governments for the coordination of Allied policy toward Italy. Representatives first appointed were Harold Macmillan, Great Britain; Andrey Vyshinski, Russia; Robert Murphy, United States; and René Massigli,

French Committee.

The second agency was the European Advisory Commission established in London for the purpose of studying questions relating to Europe. It, too, had no power beyond the preparation of joint recommendations to be submitted to the three constituent governments. Even so, the creation of this Commission was hailed by the London *Times* as "the most important operative decision of the conference" because it is "the first real political organ to be established by the United Nations." The representatives on this Commission were Ambassador John G. Winant, United States; William Strang, Great Britain; and Ambassador Fedor T. Guseff, Russia. The fact that the establishment of this Commission was first proposed by the Soviet authorities was a source of special gratification to the

British and American governments.

The Cairo Conference. Throughout the year President Roosevelt and Prime Minister Churchill had repeatedly referred in public statements to their desire to meet with Premier Stalin before the end of 1943. It was clear, too, that they desired to meet with Generalissimo Chiang Kai-shek to discuss matters relating to the war with Japan. Since these two objectives could scarcely be reached at the same conference, arrangements were made whereby two successive conferences could be held respectively with the Chinese and Russian statesmen. Enroute to meet with Premier Stalin, President Roosevelt and his staff and Prime Minister Churchill and staff met at Cairo with the Generalissimo and Madame Chiang Kai-shek and their advisers. The meetings, which lasted from November 22-25. resulted in a communiqué stating the agreement which had been reached with respect to the settlements to be made at the end of the war in the Far East. After stating their determination to crush Japan, and forswearing any gain or territorial expansion for themselves, the conferees made the following significant declaration:

following significant declaration:
. . It is their purpose that Japan shall be stripped of all the islands in the Pacific which she has seized or occupied since the beginning of the first World War in 1914, and that all the territories Japan has stolen from the Chinese, such as Manchuria, Formosa, and the Pescadores, shall be restored to the Republic of China.

Japan will also be expelled from all other territories which she has taken by violence and greed.

The aforesaid three great powers, mindful of the enslavement of the people of Korea, are determined that in due course Korea shall become free and independent.

With these objects in view, the three Allies, in harmony with those of the United Nations at war with Japan, will continue to persevere in the serious and prolonged operations necessary to procure the unconditional surrender of Japan.

While this statement did not establish a formula for the disposition of all Japanese territories about which problems might arise (e.g., the Bonin Islands, the Ryukyu Islands, Karafuto), it did provide an important indication of Chinese policy toward many of the territorial problems which would be created by the defeat of Japan. Also, it took a first step toward a new Pacific status by the declaration that Japanese control over territories acquired since 1895 was to be ended. The second step, which could not then be taken, was the determination of a future regime for those Japaneseheld territories, such as the Mandated Islands, which in all probability would not be assigned to

The Tehran Conference. The long-awaited and much-discussed meeting between Premier Stalin, Prime Minister Churchill and President Roosevelt took place at Tehran, Iran, from November 28-December 1. In an atmosphere of complete cordiality, the three statesmen conferred together on war strategy and problems of postwar settlement. The text of the final communiqué was as follows:

We—The President of the United States, the Prime Minister of Great Britain, and the Premier of the Soviet Union, have met these four days past, in this, the capital of our Ally, Iran, and have shaped and confirmed our common policy.

We express our determination that our nations shall work together in war and in the peace that will follow.

As to war—our military staffs have joined in our round table discussions, and we have concerted our plans for the destruction of the German forces. We have reached complete agreement as to the scope and timing of the opera-tions to be undertaken from the east, west, and south. The common understanding which we have here reached

guarantees that victory will be ours.

And as to peace—we are sure that our concord will win an enduring peace. We recognize fully the supreme responsibility resting upon us and all the United Nations to make a peace which will command the goodwill of the over-

make a peace which will command the goodwill of the over-whelming mass of the peoples of the world and banish the scourge and terror of war for many generations. With our diplomatic advisors we have surveyed the problems of the future. We shall seek the cooperation and active participation of all nations, large and small, whose peoples in heart and mind are dedicated, as our own peo-ples, to the elimination of tyranny and slavery, oppression and intolerance. We will welcome them, as they may choose to come, into a world family of Democratic Nations. No power on earth can prevent our destroying the Ger-man armies by land, their U-boats by sea, and their war plants from the air.

man armies by land, their U-boats by sea, and their war plants from the air.

Our attack will be relentless and increasing. Emerging from these cordial conferences we look with confidence to the day when all peoples of the world may live free lives, untouched by tyranny, and according to their varying desires and their own consciences.

We came here with hope and determination. We leave here, friends in fact, in spirit, and in purpose.

ROOSEVELT, CHURCHILL, AND STALIN Signed at Tehran, Dec. 1, 1948

Informal in style and general in phraseology, this statement was more an indication of the spirit in which the meeting had taken place than a summary of the agreement which had been reached on any matters, even those not relating to the conduct of the war. Nonetheless, the important thing was that the close working collaboration previously established between President Roosevelt and Prime Minister Churchill had now been broadened to include the chief political figure of the other leading member of the United Nations.

More specific was the second conference document issued on the same day (December 6) con-cerning the future status of Iran. Signed by the three conferees, this declaration pledged the three governments to make all possible economic assistance available to Iran during the war, and, at the close of hostilities, to give full consideration to the prospective postwar economic problems of the country. Finally, the declaration stated that the three governments and the Iranian government were united in their "desire for the maintenance of the independence, sovereignty and territorial integrity of Iran." This last assurance, designed to put an end to speculation concerning the possible postwar revival of Anglo-Russian rivalry for the domination of Iran, was widely hailed as a constructive attempt to allay the apprehensions of the smaller powers over the prospect of a postwar world which would be dominated at least for a time by the "Big Three.

Second Cairo Conference. Returning from Tehran, the President and the Prime Minister, together with Foreign Secretary Eden and Harry Hopkins, met with President Ismet Inonu, of Turkey, and with the Turkish Foreign Minister, Numan Menemencioglu, in Cairo from December 4-6. In view of Turkish neutrality, the communiqué issued at the end of the conference was necessarily general in character. It did, however, emphasize "the strength of the alliance which unites Great Britain and Turkey" and the "firm friendship existing between the Turkish people and the United States of Ameri-ca and the Soviet Union." Further emphasis was laid upon the fact that the conference had dem-onstrated "that the closest unity existed between the United States of America, Turkey and Great Britain in their attitude to the world situation. (For text of the communiqué, see Department of State Bulletin, Vol. IX, No. 233, Dec. 11, 1943.)

Bermuda Conference on Refugees. The intergovernmental committee set up by Great Britain and the United States after the Evian Conference of 1938, to deal with the refugee problem, continued activity during 1943 by sponsoring a conference of representatives of the two governments at Bermuda from April 19-29. President Harold W. Dodds of Princeton University headed the American delegation and Richard Law was the chief British representative. A final report, released to the press on May 19, stated that the Conference, while refusing to consider any measures which would involve negotiation with the heads of the Axis states, or which might impair the war effort of the United Nations, had prepared recommendations for the movement of refugees from neutral countries and, in this conection, had agreed upon a number of temporary havens to which refugees might be moved. A declaration of the determination of the governments to provide for the repatriation of the refugees upon the termination of hostilities was also recommended. Finally, the Conference submitted a plan for an enlargement of the scope and powers of the intergovernmental committee. See REFUGEES.

#### OTHER DEVELOPMENTS

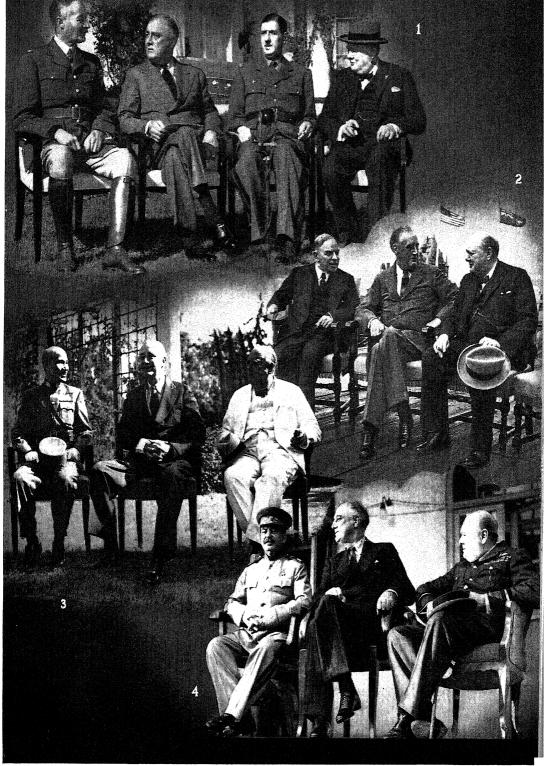

Government of Occupied Territories. Throughout the year there was much discussion of possible United Nations arrangements for the temporary government of territories liberated from Axis rule and for enemy territories which might come into United Nations hands by conquest or surrender. Both in Britain and the United States special schools were established where army and navy officers received special training for this purpose, and in Washington a Combined Civil Affairs Committee of American and British officials was established under the Combined Chiefs of Staff for the purpose of planning and coordinating administrative policies in areas occupied as a result of combined military operations.

The AMG. By the end of the year the conquest of Sicily and the subsequent surrender of Italy had made it necessary for the British and American authorities to establish an Allied Military Government of Occupied Territories (customarily abbreviated to AMG) for Sicily and for that part of Italy behind the Allied lines. In Sicily this military government was set up under the direct authority of Gen. Sir Harold Alexander who was designated Military Governor of the Island as well as commander of the Allied forces there. Lord Rennel of Rodd became the active administrative head, and his chief assistant was Brig. Gen. Frank J. Mc-Sherry. In the organization under these officers, British graduates of their Civil Affairs Staff Center and American officers trained at the Charlottes-ville, Va., School of Military Government were mingled indiscriminately in a combined administration which undertook the complex tasks of restoring order, reestablishing public utilities, reopening schools, rebuilding shattered communications systems, providing immediate relief for the civil populace, and all the other problems involved in first stages of repairing the havoc of war.

Control Commission for Italy. Reference has been made above to the Advisory Council for affairs relating to Italy, created at the Moscow Conference. This agency superseded the Allied Mediterranean Commission, the establishment of which had tentatively been agreed upon several months earlier. Beneath this council there was established an Allied Control Commission consisting of a Political Section and an Economic and Administrative Section. Each section was staffed by British and American members. Initially, Henry W. Grady, former Assistant Secretary of State, was designated as the ranking American member of the Economic and Administrative Section, and Samuel Reber, a U.S. Foreign Service Officer, was appointed to a position of similar rank on the Political Section.

Investigation of War Crimes. In January, 1942, eight Governments-in-Exile and the Free French Committee signed a joint declaration committing themselves to the postwar punishment of persons responsible for acts of criminal violence committed by German armies and their satellites in occupied territories in violation of the 1907 Hague Convention. Fifteen nations had joined in this warning by Dec. 31, 1943. On July 30, 1943, President Roosevelt urged neutral nations to deny asylum to such war criminals. On the following day notes to this effect, signed by Great Britain, Soviet Russia, and the United States, were sent to each of the neutral nations. More emphatic was the Moscow declaration on this subject which is summarized above.

Investigation of war crimes was implemented by the establishment in London of a United Nations Commission for the Investigation of War Crimes. Herbert C. Pell has been appointed as the U.S. representative on the Commission. In addition to the collection and collation of factual data, the

## UNITED NATIONS LEADERS IN A SERIES OF HISTORIC MEETINGS

- 1. At Casablanca: Giraud, Roosevelt, De Gaulle, Churchill
- 3. At Cairo: Chiang Kai-shek, Roosevelt, Churchill
- 2. At Quebec: MacKenzie King, Roosevelt, Churchill 4. At Tehran: Stalin, Roosevelt, Churchill

Commission was concerned with the preparation of arrangements for the actual conduct of the trials.

Axis Control of Property in Occupied Territories. Concern over the extensive transfer of property rights, by coercion or otherwise, in occupied territories to Axis governments and their nationals resulted in a United Nations Declaration signed by 17 governments in London, Jan. 5, 1943. The signatories gave blunt warning that they "reserve all rights to declare invalid any transfers of, or dealings with, property rights and interests of any description whatsoever which are, or have been, situated in the territories which have come under occupation or control . . . of the governments with which they are at war." They added that "this warning applies whether such transfers or dealings have taken the form of open looting or plunder, or of transactions apparently legal in form even when they purport to be voluntarily effected."

Reorganization of Military Command. In preparation for an all-out offensive against Germany in 1944 the American-British high command was reorganized late in the year, and President Roosevelt announced in his Christmas Day broadcast that Gen. Dwight D. Eisenhower had been selected as the supreme commander of the Allied forces. His Deputy was Air Chief Marshal Sir Arthur Tedder, and Gen. Sir Bernard L. Montgomery was chosen to head all British ground forces under General Eisenhower's command. Gen. Sir Henry Maitland Wilson succeeded to the command of Allied forces in the Mediterranean. Gen. Sir Harold Alexander remained as commander-in-chief of the Allied armies in Italy. Lt. Gen. Ira C. Eaker was appointed to head Allied air forces in the Mediterranean, and Air Chief Marshal Trafford Leigh-Mallory was picked to command the Allied air forces in the West. General Wilson's chief American assistant in the Mediterranean was Lt. Gen. Jacob L. Devers. (For previous organization of intergovernmental war machinery, see 1943 YEAR BOOK, page 704.)

War and Peace Aims. For a comprehensive list of documents and official statements concerning the war and peace aims of the United Nations, see "War and Peace Aims," Special Supplement No. 1 (Jan. 30, 1943) and No. 2 (December, 1943) to the United Nations Review (United Nations Information Office, 610 Fifth Avenue, New York City). UNITED NATIONS INFORMATION BOARD. An organization created under the name of the Inter-Allied Information Committee in September, 1940. It is served by the staff of the United Nations Information Office, which is financed by 19 of the United Nations and works closely with the Office of War Information. The Office acts as a service agency for establishments of the United States government and for the public, and as a central clearing house for

information on postwar planning. It maintains a reference library and publishes monthly the *United Nations Review*. Chairman of the Board: Arthur Sweetser.

UNITED NATIONS RELIEF AND REHABILITATION AD-MINISTRATION (UNRRA). See RELIEF AND REHABILI-TATION; UNITED NATIONS. For Council, see also LEAGUE OF NATIONS.

UNITED SERVICE ORGANIZATIONS, INC. (USO). Following passage of the Selective Service Act, Sept. 14, 1940, when Army camps and Navy posts were rapidly filling up with trainees, the problem of providing off-duty recreational and other services to the men was forcibly brought to public atten-tion. Small communities near training camps lacked the means and the facilities to cope with hundreds of daily visitors in uniform. Rather than have these services rendered independently through separate agencies as was done in World War I, leaders of the agencies saw the advantage in pooling their experience and skills in one common organization, while at the same time retaining their separate identities. Accordingly, on Feb. 4, 1941, with the approval of President Roosevelt and the War and Navy Departments, USO was formed with the following member agencies: The Young Men's Christian Associations, the National Catholic Community Service, the Salvation Army, the Young Women's Christian Associations, the Jewish Welfare Board, and the National Travelers Aid Association (qq.v. under Societies)

USO is supported entirely by public subscription. In 1941 and 1942 it obtained \$14,853,666 and \$32,586,501 respectively through its own campaigns. In 1943, with 16 other major warrelated agencies, it was a member of the National War Fund (q.v.), which conducted a nation-wide campaign for \$125,000,000. USO's quota of that amount was \$61,227,000 for 16 months' operation.

The groups served are men and women in the armed forces. Members of the Women's Army Corps and women's auxiliaries of the Navy, Coast Guard, and Marines are admitted to USO clubs and other service units on the same basis as men in uniform. Services are also extended, as required, to Army and Navy nurses, merchant seamen, wives of service men, and war industry workers in certain areas. There are USO operations in the continental United States and in bases elsewhere in the western hemisphere. USO-Camp Shows visits American troops in all combat zones, as well as throughout the western hemisphere.

USO came into being at the time the nation was preparing its defenses under the threat of war. Future demands could not be foreseen. This required flexibility, and quick adaptation to meet new needs as they arose. Originally it was planned to operate 341 clubs in 200 communities. When America entered the war, Dec. 7, 1941, USO had 496 clubs and other centers in operation. With the tremendous expansion of our armed forces USO services also had to expand rapidly; USO operations totaled 2,779 as of Dec. 20, 1943.

It has been necessary to diversify the types of service provided. Greatly increased travel by men in uniform called for special facilities in rail and bus stations. The Troops-in-Transit Service was instituted and by the end of 1948 was operating 125 lounges at principal transportation centers, providing comfortable rest quarters, reading and writing material, refreshments, and information. Supplementing the lounges, 152 USO-Travelers

Aid desks were assisting service men and their families with travel problems.

Coastal defenses were greatly strengthened after Pearl Harbor. Life at these outposts is lonely; leaves are infrequent. To reach these men USO organized its Mobile Service Division, which operates 130 units on both the Atlantic and Pacific coasts, and 28 units inland for troops on maneuvers. Mobile units give motion picture shows, and bring books, writing paper, games, refreshments, and other supplies.

USO Overseas Services Division was formed to serve troops stationed in western hemisphere bases outside continental United States. This Division operates 166 clubs and other service units from Alaska and Newfoundland down through the Panama Canal, Bermuda, the Caribbean area to Brazil, and also in Hawaii.

USO-Camp Shows, an affiliate formed after Pearl Harbor, has become the largest live-talent theatrical circuit in American history. Eighty-five units tour Army camps and Navy posts throughout the United States, and 35 entertain troops in western hemisphere bases and in the combat zones. USO-Camp Shows performs directly within military reservations, supplying admission-free enter-tainment to service men and women. Leading stars of stage, screen, and radio, as well as concert artists and symphonic and popular orchestras give volunteer performances.

The clubs render the chief volume of USO services. After Pearl Harbor new clubs opened at an average rate of 52 a month for nearly two years, reaching into 48 States, the District of Columbia, and 16 western hemisphere bases. There are now 1,716 clubs in continental United States, including 648 operated by local communities in affiliation with USO.

Equipped with lounges, writing rooms, showers, snack bars, game rooms, libraries, phonographs, radios, and auditoriums, they provide a haven for service men and women on leave from military posts. Most clubs have photographic dark rooms and craft and hobby shops. Programs include dances, moving pictures, classes in languages, crafts, art and other subjects, social parties, forum and current event groups, sports, and musical

Information and counsel on personal problems constitute an important part of club services. USO staffs, carrying out the inter-faith policy of USO, offer to those desiring them religious programs in cooperation with local clergy of the different faiths. Opportunities are also provided for service men and women to continue customary church attendance and association with churchmen and church members. Religious counsel, as requested, is also available.

Special programs are held for the wives of service men, such as social gatherings and classes in prenatal and child care, sewing, nutrition, and

cooking.

Through the cooperation of local groups—women's organizations, civic, business, and patriotic clubs, and churches—the USO clubs reach beyond their four walls into community life. These groups sponsor some programs within the clubs, and others elsewhere, such as picnics, dances, beach and fishing parties, depending on the topography and the season. Through the club, local families invite men and women to dinners in their homes. In this way the club enters the community and the community becomes part of the club.

The work of 1,000,000 volunteers is indispensable at clubs and lounges, not only in assisting professional staffs but also in providing companionship to men and women in service at programs and social events.

In addition to serving men and women in the armed forces, USO extends services to war workers and their families in certain overcrowded war production centers. Programs are patterned after those for the armed forces, with emphasis on classes for women similar to those for the wives

of service men.

Of USO's 2,779 operations, 1,790 are operated by USO member agencies and 989 by local communities in affiliation with USO. They are located in 1,214 cities and towns in 48 States, and the District of Columbia, and in 76 communities in 16 areas elsewhere in the western hemisphere. Attendance at both clubs and lounges is approximately 28,000,000 a month. USO-Camp Shows perform before an average monthly audience of 2,000,000 including combat zones.

USO officers in 1943 were: Chester I. Barnard, President; John D. Rockefeller, Jr., Honorary Chairman; Walter Hoving, Chairman of the Board; W. Spencer Robertson, Chairman of the Executive Committee; Francis P. Matthews, Frank L. Weil, and Mrs. Henry A. Ingraham, Vice-Presidents; Randall J. LeBoeuf, Jr., Secretary; and John F. Hickey, Treasurer. National headquarters are in the Empire State Building 250 Effect. are in the Empire State Building, 350 Fifth Avenue, New York 1, N.Y. See Music; National WAR FUND; the component agencies under So-CIETIES.

UNITED STATES. The area of the United States proper, or the 48 States and the District of Columbia, is 3,022,387 square miles; this excludes inland waters having an area of 45,259 square miles. The noncontiguous lands subject to the authority of the United States (Alaska, Hawaii, the Philippine Islands-autonomous but not yet independent, the Panama Canal Zone, Puerto Rico, Guam, the Virgin Islands, and American Samoa) comprise 711,-606 square miles.

#### THE DOMESTIC FRONT

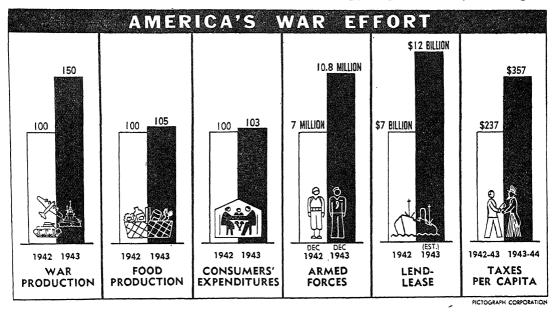

The year 1943 found the United States, in bold contrast with its plight on the fateful Sunday of Dec. 7, 1941, completely on the offensive on the battlefronts throughout the world with its fighting men or materiel, or both. (See WORLD WAR.) For two years the Allied divisions, fleets, squadrons, and flights, growing steadily in force and battle skill, had hammered at Axis might with decisive effect. The tide had turned in every theater of war. As the year ended the Anglo-American assault forces were gathering under the supreme command of Gen. Dwight D. Eisenhower for the long-awaited invasion of Hitler's "Fortress Europe" from the West and North. One of the nation's big problems was to put down recurrent waves of overoptimism that threatened to relax the home task of backing up the fighting fronts. Complacency became a new war hazard. Although battles brought Allied victories, harmony was not complete on the domestic front.

Whereas the history of the United States dur-

ing 1942 was primarily a record, at home, of readjustments of humans, money, and machines to meet unprecedented war demands, that of the year just closed was marked by a driving force, spurred by mounting casualty lists (which neared 140,000 at year-end). Despite many internal handicaps, it brought all branches of the armed forces nearly to peak strength, and production of materials and materiel to maximum capacity volume, with planes rolling off production lines by November at a rate faster than one every five minutes, day and night. And it brought the United States itself to a new frame of mind.

The nation was thinking and acting with vastly increased unity far beyond its borders. Traditional barriers, economic, political, racial, and philosophical, crashed under the impact of united determination for complete obliteration of Axis aggression and treachery. What remained of isolationism was in full retreat. That there would be no letup short of "unconditional surrender," determined at the Roosevelt-Churchill conference at Casablanca in January (and effective when Italy's armed forces capitulated in September) was only the first of many 1943 military and political decisions that traced the steady progress of the war toward assured victory. The personal meetings between the American President and the British Prime Minister continued, with significant timing, at Washington, Quebec, Cairo, and Teheran, each writing an important chapter of history. The nation followed its President over 25,000 miles of foreign travel under

wartime hazards, and gave his actions approval. But strikes continued to break out over wage increases to meet rising living costs. Repeatedly the Government found it necessary to seize mines and factories to keep production going. The specter of inflation became more menacing as pay, straining at limitations, and prices, breaking through ceilings, provoked periodic crises in coal, aircraft, steel, and other vital war industries. Organized labor set out to break through the "Little Steel" wage stabilization formula limiting increases to 15 per cent to cover the rise in living costs between January, 1941, and May, 1942. Farm groups in and out of Congress sought to modify (some even to scrap) the price control system. Resigna-

tions disrupted the Office of Price Administration and that organization again changed its leadership and was streamlined to improve its operations. Administration programs for consumer food price roll-backs by means of subsidies split the Congress. War Food Administrator Chester C. Davis, disagreeing with that system, resigned. War agencies, and officials heading or holding key positions in them, brought their quarrels into the open.

On May 29, President Roosevelt, moving swiftly to repair the cracks and breakdowns of a vast Administration war machine weakened by divided authorities—the duplicated functions and feuding that had become "the Battle of Washington"—established a supreme Federal agency, the Office of War Mobilization, to conduct the war on the home front. James F. Byrnes, who had been Director of Economic Stabilization since October, 1942, was put in command. (See subhead below.) Under Presidential draft, Judge Fred M. Vinson resigned from the U.S. Court of Appeals for the District of Columbia, to which he had gone from a seat in the House of Representatives, to become Director of Economic Stabilization (q.v.), No. 2 post in the home front command. Bernard M. Baruch, still able and vigorous, was called back to war trouble-shooting repeatedly when rubber, manpower, and other snarls appeared.

President Roosevelt, in his January budget message, which called for the meeting of costs comparable in this one year to those of the Government during the first 143 years of the nation, reminded that "we are all soldiers, whether in uniform, overalls, or shirt sleeves." In uniform and out, many millions of men and women volunteers on the home front pursued unabated their activities in many services. While improved strategic conditions permitted a relaxation of air raid warden, spotting, and similar duties, the work of such volunteers as those in the Volunteer Special Services of the American Red Cross, the American Women's Volunteer Services, and the United Services Organizations, increased tremendously. As the tempo of battle rose volunteer donors contributed approximately 5,000,000 pints of blood for life-saving plasma. (See Societies.)

The people became used to rationing, and uncomplainingly, for the most part, resorted to crowded trolley car and bus, for town travel. Housewives became expert at planning meals on a point system, introduced in January. With sugar and coffee already rationed, the program spread through canned vegetables and fruits, and soups, meats, butter, catsup, and so on. Winter brought serious heating problems into homes in the East and North. Householders who, because of oil shortages, had converted to coal found this fuel hard to get, though the Solid Fuels Administration stretched supplies by allocations and accelerated transportation of fuels. Gasoline shortages persisted, pleasure driving was banned during two periods, though midsummer vacation driving was allowed. In August and September gasoline rationing in the East eased up slightly and tightened up in the mid-West to equalize supplies. The people got along.

To increase the oil and gasoline movements to the East, the I,251-mile "Big Inch" pipeline (\$95,-000,000) from Long View, Tex., to Phoenixville, Pa., was rushed to completion and dedicated in July by Secretary of the Interior Ickes as Petroleum Administrator for War (q.v.). This gave promise of an eventual increase in Eastern receipts by some 300,000 barrels a day, but mostly for war overseas. August brought beer shortages as against increased consumption. Liquors began disappearing from consumer markets in the autumn to such an extent that the Senate authorized a Judiciary subcommittee to determine whether the shortages were real or created deliberately for profit.

The President, warning that there must be belt-tightening, accompanied by payment of heavier taxes, asked for \$16 billions of new money to close the inflationary gap between buying power and goods and services available for purchase. This request later was modified to \$10,500,000,000. The end of the year saw tax plans, not yet enacted, to produce one-fourth of that amount in new revenue.

Office of War Mobilization. Established by Presidential executive order on May 29 as the over-all Federal agency to conduct the war on the Home Front, the Office of War Mobilization was assigned these functions: To inaugurate and develop unified programs and establish policies for the maximum utilization of natural and industrial resources for both military and civilian needs. To make maximum use of the nation's manpower outside of the armed forces, maintain and stabilize the civilian economy, and adjust the economy to war needs and conditions. To eliminate conflicts in operations and practices of Federal Departments and agencies engaged in or concerned with war production, procurement, distribution, or transportation of military or civilian supplies, materials, or products. To resolve controversies, except those relating to disputes over agricultural prices and wage increases which would affect price ceilings, these to be handled by Fred M. Vinson, the Director of Economic Stabilization. The OWM was given a War Mobilization Committee, or "cabinet," consisting of Secretary of War Stimson, Secretary of the Navy Knox, Director Vinson, Donald M. Nelson, chairman of the War Production Board, and Harry L. Hopkins, special assistant to the President and chairman of the Munitions Assignment Board. But the committee had only advisory authorities. The power to establish policies and sign directives was left with Mr. Byrnes, subject to the direction of

the President.

To "keep both our military machine and our essential economy running in team at high speed, the President clothed Mr. Byrnes with powers exceeding those delegated to Donald M. Nelson, as chairman of the War Production Board (the top civilian war agency of 1942), or those which President Wilson loaded upon Bernard M. Baruch, as chairman of the War Industries Board, during the first World War. It was asserted facetiously that Mr. Byrnes had been made "Assistant President" on the assumption that he had been assigned to

run the home front, leaving the President free to handle international problems. The OWM has not published any report of its activities, and it operates much behind closed doors. However, it can be stated that Mr. Byrnes has had a hand in the following (though the extent to which his decision has been final is not clear): the manpower situation; the "Little Steel" formula; the Government's tax policy (in line with his stabilization duties); the holding of the National War Labor Board together at a time when its members were ready to resign (by allowing some flexibility in the hold-the-line program); the Administration's fight for roll-back subsidies; coal mine and railroad negotiations; and the intramural "Battles of Washington" (see below under Produc-

Mr. Byrnes apparently has leaned heavily upon Mr. Baruch, especially with regard to the manpower situation and in the formulation of a uni-

tion).

form contract-termination clause for fixed-price contracts. On November 6, Mr. Baruch was appointed head of a new unit within OWM for dealing with war and postwar adjustment problems, and for developing unified programs and policies to be pursued by the various government agencies concerned.

See also Business Review; Postwar Planning. Inflation. Inflation sought opportunities in thousands of places to undermine the economic structure. Emergency agencies set up since 1940 rushed in to close a \$16-billions inflationary gap, proposing drastic increases in taxes, enforced saving, rigid price and rent ceilings, wage stabilization, heavier government bond buying, restrictions on farm and city cost rises, extensions of rationing, and curbs upon credit purchases, but corrective measures were operating piecemeal.

ures were operating piecemeal.

President Roosevelt vetoed the Bankhead farm parity price bill, warning of "an inflationary tornado," on April 2, holding that agricultural prices as a whole (the striking of relative rates between the farmer's purchasing power and that of the city worker) had reached 115 per cent of the parity which agriculture had striven for years to attain. The bill died, but other similar issues took its

place.

In a far-reaching "hold-the-line" order issued April 8, President Roosevelt forbade wage increases above the level of the "Little Steel" formula and restricted future price elevations to the minimum extent allowed by law. He authorized War Manpower Commissioner Paul V. McNutt to prevent workers from shifting to jobs at higher pay except when the change would be to aid the prosecution of the war, and directed Chester C. Davis, then War Food Administrator, and Prentiss M. Brown, then Price Administrator, to put ceilings upon all commodities which affected the cost of living and to roll back those unnecessarily high. New plans for fighting inflation with roll-back subsidies on foods were announced in May by Administrator Brown, the program concentrating upon beef, pork, veal, mutton, coffee, and butter, with consumer prices to be rolled back by an average of 10 per cent through the use of Reconstruction Finance Corporation funds. This supplemented the plan which the Commodity Credit Corporation had put into effect for certain vegetables, cheese, coffee, tea, sugar, and other items. Food, long an inflationary sore spot, continued a major problem. The OPA (q.v.) underwent a streamlining in mid-August, with Chester Bowles, general manager, aiding Administrator Brown in the selection of businessmen to replace the attorneys and "professors" whose work had irked Congress. Mr. Bowles was understudying Mr. Brown, who had taken the administratorship on a temporary basis and, as soon as the reorganization was completed, took over when Mr. Brown resigned October 21.

By October money in circulation reached a new record of \$19½ billions, an increase of \$410 millions over September, and it continued increasing. War bond redemptions were \$148 millions, against \$26 millions a year earlier. However, war bond sales had increased from \$755 millions to \$1,927,000,000. For a second consecutive month living costs edged upward, and the OWM looked to new

ways of applying the brakes.

The President, on November 1, sent his longest message to Congress, defending the subsidy method of rolling consumer food prices back, and left no doubt that his previous vetoing of subsidy bans earlier in the year (see below under Food) would not be his last. Soon, legislation to extend the life

of the Commodity Credit Corporation, the instrument into which subsidy prohibitions had been written, was up again, to carry the CCC forward beyond December 31. On November 23 the House, with a vote of 278–117, extended the CCC to July 1, 1945, but again prohibited food subsidies after December 31. The Senate, extending the CCC to February 17, put its subsidy decision over to the next session. See also Business Review.

Armed Forces. With the American armed forces at a strength of 10,100,000 (7,400,000 Army and 2,700,000 Navy) as the year closed, Selective Service officials still looked to eventual reductions in their calls, but not as soon as had been expected. To reach goals for July 1, 1944, it appeared that the Army would require 700,000, the Navy 300,000, and that replacements would be at least 300,000. Uncertainty over the outcome of the Congressional controversy over the drafting of pre-Pearl Harbor fathers had slowed down inductions. Disappointing results of recruitment of women to release service men for combat assignment also had a material effect. There was trouble, too, with many local draft boards, which refused to call parents while unmarried men remained uninducted.

The U.S. Navy, since 1940, had become "the greatest sea-air power on earth." In the face of losses and transfers to Allies, it had grown from 1,076 vessels displacing 1,875,000 tons, to 14,072 displacing nearly 5,000,000 tons. The Air Force had risen from 1,744 to 18,269 planes. Successful experiences with landing boats in invasions prompted the initiation of a \$5 billions building program, with \$1 out of every \$4 spent by the Navy to go into construction of this type of craft. Effective combatting of submarines by the Allies rose to new heights in November, when the number of U-boats sent to the bottom exceeded the number of merchant ships they sank. (See Aeronautics; Military Progress; Naval Progress; Shipping.)

Most controversial of the problems of building up the armed forces was that involving the drafting of pre-Pearl Harbor fathers (parents of military age with children born before Sept. 15, 1942). The fight that followed the decision that perhaps 446,000 of the estimated total of 6,550,000 would have to be called between September and January 1, was bitter and sustained. With the issue still pending before Congress, the Father Draft began officially October 1. The Congressional decision, permitting such inductions but putting pre-Pearl Harbor parents at the bottom of nationwide draft pools, and wiping out the War Manpower Commission's "work or fight" program, was not put into law by the President's signature until December 10. In October, November, and December 90,000 (instead of 446,000) pre-Pearl Harbor fathers were inducted, but heavier inductions from this class were forecast for the first six months of 1944. See Selective Service System.

Munpower. By August nearly 65,000,000 men and women were in uniform or in essential occupations, almost one-half of the country's population, but manpower shortages persisted. Commissioner McNutt of the War Manpower Commission (q.v.) expanded the nondeferrable ("work or fight") list, which later was to be scrapped by Congress, to cover 60 occupations and activities, and tightened up upon demands that all necessary skills be routed into essential productivity. This was another step taken in the drastic effort to hold off legislation for a National Service Act. Occupations were placed above dependency status in

the eligibility of Selective Service registrants for draft call. Mr. Baruch went to work as a member of a special "cabinet" to function with Mr. Byrnes to find a way out of the "manpower muddle." The report, made after extensive investigation and study, said that industry must produce more effi-ciently, or else there must be a cut-back of war production. It called for studies to prevent production of oversupplies of certain war materials, a review of farm draft deferments, checks against laxity in replacing workers deferred for war jobs, stoppage of the cost-plus-fixed-fee system of awarding contracts, and adoption of the West Coast (Baruch) program for withdrawing new contracts and cutting civilian output in accordance with labor supply and demand.

Production. The "miracle of production" for war continued through 1943 despite battles over priorities on materials, quarrels over administrative authority, strike outbreaks, and shortages of manpower and materials. Not all schedules were met in numbers of planes, tanks, and other matériel, but numbers in some programs lost significance through war-dictated changes in types and sizes of fighting products. For an over-all report on war production, see Business Review under Basic Industries and Armament Production; WAR PRO-

DUCTION BOARD.

Expansion of industry had about reached capacity by October. The big problem ahead was to get still greater production through more efficient em-ployment of facilities and manpower. Methods designed to accomplish this were available in the Byrnes-Baruch report. Old problems, however, remained. With scores of war production programs requiring the same materials, disagreements existed over priorities between various agencies and within the War Production Board (q.v.) itself, where the question of military or business control of materials and programs, long smoldering, came out into the open in February and prompted WPB chairman Nelson to reorganize, with Charles E. Wilson as executive vice-chairman in charge of all programs. While some puzzles were solved, others plagued production in later months when output had to be increased with existing facilities.

"Progressive" tactics in planning and adminisrrogressive tactics in planning and administering the acquisition of war materials from other lands clashed in public with "conservative" management in July, bringing Vice-President Wallace, as chairman of the Board of Economic Warfare,

and Secretary of Commerce Jesse H. Jones, as head of the RFC and its various war corporations, to bitter grips with charges and debate as to which was aiding or hampering the war program. On July 15 President Roosevelt revamped the Administration's foreign economic machine, rebuked the Vice-President and the Secretary of Commerce, abolished the BEW and set up the Office of Economic Worker (2011) nomic Warfare (q.v.). In settling this dispute Mr. Roosevelt adopted a general plan based upon the British system of consolidating foreign economic operations, and included lend-lease in the new set-up, with Leo T. Crowley, who had been Alien Property Custodian, at the head of the new establishments. tablishment.

Within ten days differences between Secretary of the Interior Harold L. Ickes, as Petroleum Administrator for War (q.v.), and Price Administrator Brown, over rationing of gasoline drew Washington focus. These differences spread to oil prices, with Mr. Ickes urging an increase in crude prices to encourage drillings for new petroleum stocks. Exchanges were as bitter as those, earlier in the year, between the War and Navy Departments, on one hand, and William F. Jeffers, Rubber Administrator, on the other, over priorities on materials required for 100 octane gasoline for planes and for synthetic rubber plants. The House, on December 13, voted 171–92 to force the OPA to raise oil prices, a move interpreted as being highly inflationary, and put the next move up to the Senate.

Intercessions by the President and Mr. Byrnes composed these quarrels. On September 14 Mr. Jeffers resigned to return to the presidency of the Union Pacific R.R., saying that "the big job of getting synthetic rubber plants into operation is over." Col. Bradley Dewey, deputy administrator, took over the rubber program. Production reached a rate of 45,000 long tons in December and promised to move up to 70,000 tons a month by the end of 1944. (See RUBBER.)

Food. Fears in the spring that food production quotas could not be met, though the United States was faced with the problem of "feeding the world," caused an unprecedented concentration upon wheat, rice, peanuts, beans, potatoes, corn, beef, pork, veal, milk, and eggs. The harvest season showed a production of 5 per cent more food than the 1942 record, including 24-billion pounds of meat. This production, however, was not to

make more bountiful the tables of American homes. Requirements of the armed forces, lendlease, and the liberated areas were steadily on the increase and must be met. Food supplies in American cities fluctuated from period to period, at times raising reports of "near famines" of meat, exhausted supplies of butter, and scarcities of this item and that, but there also were times when concentrated efforts to repair such lacks resulted in overstocking at points, accompanied by complaints

of spoilages.

In March President Roosevelt called in Chester C. Davis, who had been his administrator of the Agricultural Adjustment Administration, to be War Food Administrator, replacing Secretary of Agriculture Claude R. Wickard in command of food production and distribution. But Mr. Davis soon ran into difficulties over the boundaries of his authorities and those of the OPA. Mr. Roosevelt, not wanting a food "czar" despite Congressional demands for one, had set limitations on powers. Congress took the Davis side and on June 25 wrote its first subsidy bans or restrictions into its legislation extending only until the end of the year the life of the Commodity Credit Corporation (q.v. in Agriculture), through which the subsidy program had been chiefly operating. On July 4 Mr. Davis resigned and was replaced as War Food Administrator by Judge Marvin Jones, a former chairman of the House Committee on Agriculture. The President vetoed the anti-subsidy legislation. Congress then extended the CCC's life without action on subsidies, reserving another fight until the autumn, one that continued without final answer through the rest of the year. (See above under Inflation.

The OPA in mid-September set out to cut back the cost of living by at least 2.3 per cent by lowering retail prices through a purchase and sale plan estimated to cost \$100 millions a year, on apples, oranges, potatoes, lard, vegetable oils, and peanut butter. Food prices, which had risen 12 per cent during the last winter, fell 4.1 per cent during June, July, and August below the May levels, but had started up again. (See Agriculture;

FOOD INDUSTRY; LIVING COSTS.)

Labor. The no-strike, no-lockout pledges of 1942 were kept generally, but the exceptions were glaring ones. Production records made by labor, as well as by industry, were in keeping with highest American tradition despite the blots upon the record. For the third time in history and while the nation was at war, the country was threatened with a general railroad strike, a threat that was cut short on December 27 when President Roosevelt, giving an hour's notice, ordered Secretary of War Stimson to take the carriers over. The same night found an estimated 170,000 workers away from their posts at vital steel-producing centers in seven States, refusing to work without a retroactive pay clause in a new contract to be written to replace the one terminated by union action. They went back to work the next day after the NWLB voted for retroactive application of final adjust-

ments. See RAILROADS.
"Unauthorized" and "wildcat" walkouts had broken out periodically through the months in one section or another to such extent that question in some instances was raised as to the sincerity of labor leaders in their denunciations of the stoppages or their ability to control their unions. On four separate occasions the nation faced fuel crises through walkouts by members of the United Mine Workers of America, headed by John L. Lewis. The "no contract, no work" policy traditional

with the U.M.W. led to the walkouts, which twice provoked the Government to seizing the mines, which for a period of months found Lewis declin-ing to "recognize" the War Labor Board, and which resulted finally in a settlement viewed widely as "an appeasement." See Coal.

Strikes of brief duration broke out in the Detroit

key production area, at Akron, and in the aviation industries of the East and West Coasts. The Government stepped in a score of times and took plants over. Altogether, while strikes and other stoppages engaged less than one per cent of the vast forces at work, they cost war production an estimated 12,785,000 man-days of lost time.

Congress, in an angry mood over war produc-tion stoppages by midyear, passed the Smith-Connally strike control act. President Roosevelt vetoed it June 25, but both Senate (56-25) and House (244-108) overrode his action the same day and put the act upon the books. Labor called it an anti-strike law, but it did not prevent striking.

Throughout the year organized labor, led by the Congress of Industrial Organizations, centered its fight upon the "Little Steel" yardstick. With its demand for a 17-cents-an-hour pay increase, the CIO's United Steelworkers, under Philip Murray, CIO president, sought to break that formula. While wage scales were being held to the 15 per cent increase limit of the "Little Steel" formula, there was nothing to prevent daily or weekly earnings by workers to rise through overtime work, at premium pay. Labor demands, though, were con-

centrated upon hourly wage scales.

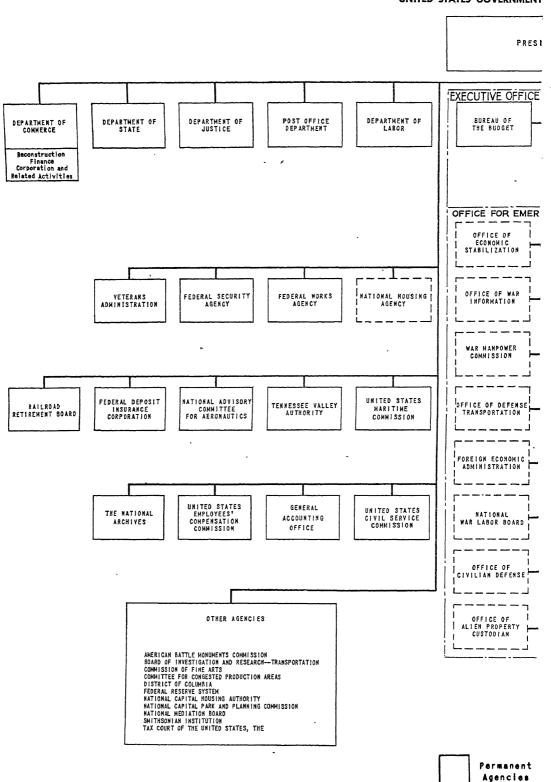

The National War Labor Board, William H. Davis chairman, lost favor with organized labor, while many segments of industry held that it had been too liberal in its wage increase grants and had operated to effect a general 15 per cent rise not always with individual circumstances and conditions in mind. While the wages of organized labor were being elevated to harmonize with the cost-of-living rise between January, 1941, and May, 1942, there were some 15,000,000 "white collar" and other workers, unorganized, who had had their wages and salaries frozen by hold-theline and other executive decrees.

See LABOR CONDITIONS

Politics. Politics took no holiday in 1943. Fourth term talk began in Congress and on the sidelines as President Roosevelt started his eleventh year in the White House. Postmaster General Frank C. Walker, heading a delegation of Democratic National Committeemen, called at the White House in March and mentioned a fourth term to the President. "I'm not sure he heard it," Mr. Walker reported later. But through the year the big political question remained the same: "Will the President run again?" Signs that he would were seen from time to time as observers watched closely. Mr. Roosevelt kept them speculating, even after having let it be known that he wanted "New Deal" as the designation of his Administration to give way to "Win the War." After this got out, Mr. Roosevelt, at a press conference, said that Dr. New Deal had cured the internal ills which had attacked the country in 1932, and Dr. Win the War was now called in to cure the fractures and dislocations caused by the "accident" at Pearl Harbor on Dec. 7, 1941. He denounced as "picayune" an inquiry as to whether this was a fourth term declaration.

As the year ended both Democratic and Republican camps were split badly. In the Republican organization the principal objective was to crowd Wendell L. Willkie, 1940 standard bearer and

nost active of the unannounced 1944 possibilities, out of the scene. The task was concededly a hard. one, but apparently showed some, though not conclusive, results. Democratic forces in Congress were divided sharply. Angry southern Senators were smarting under charges by Senator Joseph F. Guf-fey of Pennsylvania that they had entered into "an unholy alliance" with northern Republicans to defeat the Democrat-sponsored absentee service men's voting bill and substitute a "State rights" measure, and with an anti-poll tax fight in the offing, they called for organization of a Democratic Party of the South. Senator Harry F. Byrd of Virginia was put forth as a potential nominee for the Presidency, though not by his own initiative.

A further breaking of the Republican isolationist lines was another sign that colored the political scene, bringing the two major parties closer in international thought and leaving domestic problems and "New Deal bureaucracy" a separate issue to be fought out in the campaigns. This, it was held, gave the Republicans, flushed with victories in offyear elections (see ELECTIONS), especially in Kentucky, an advantage, or at least a new encourage-

The Republican Postwar Advisory Council, meeting in September on Mackinac Island, Michi-gan, put to rout the unofficial Republican Postwar Committee which was organizing throughout the country to give emphasis to and then remove the isolationist brand from the party. It produced a resolution, much of the spirit of which was viewed by Republicans as having been written into the Senate (Connally) resolution on postwar peace policy in November and into the Four-Nations Declaration of Moscow.

Strenuous efforts were being made to make an avowed presidential candidate of Gov. Thomas E. Dewey of New York, despite his repeated declarations that he was not an aspirant. In December, after Alfred M. Landon, 1936 GOP standard bearer, on the basis of soundings in many parts of the country termed Mr. Dewey the No. 1 prospect, the New York Governor submerged himself into a "no comment" status. State GOP leaders increased their pressure upon Dewey. Gov. John W. Bricker of Ohio, the first to announce, said on October 30 that he would enter his State's primary in May; Harold E. Stassen, former Governor of Minnesota, a naval officer on active service, was entered for the Nebraska primary in April, 1944. Mr. Willkie and Gen. Douglas MacArthur, on whose behalf clubs were being formed in various sections of the United States, remained as possibilities. The vote of service men figured strongly in the

calculations of both major parties and means were sought, particularly by Democrats, to have it play a prominent role in the election of the President, Vice-President, and the Seventy-ninth Congress. Under the sponsorship of Senators Green of Rhode Island and Lucas of Illinois, the Senate Committee on Privileges and Elections brought out a bill in November to streamline absentee balloting procedure radically. Where the 1942 Soldier Voting law had brought in only 28,000 votes, the Green-Lucas measure anticipated armed service votes from every battle station and home camp by millions. On December 3, after spending six days rewriting the Green-Lucas bill on the floor, the Senate, voting 42-37, threw it away and passed a substitute sponsored by three southern Democrats, Senators Eastland of Mississippi, McKellar of Tennessee, and McClellan of Arkansas, which would turn the entire service voting program back to the States. Though southern Democrats and northern Republicans were blamed by Administration men for this action (asserting that poll tax preservation was the motive) the sectional partisans accused actually represented only one-third of the vote that caused the upset. The Federal program was alleged to be unconstitutional. It appeared, from debate, that if it should be finally adopted it would be challenged in the courts and possibly throw the Presidential-Congressional election into controversy and confusion. The legislation, sent to the House, was still in committee when the session ended.

TROLS; agency chart on preceding pages.

## POSTWAR POLICY ISSUES

From the beginning of the year there was a consciousness in Congress that it should express itself to the nation and to the world on the question of cooperation by the United States with the Allied nations in the postwar period to preserve the peace for which the war was being waged. Resolutions poured in, some calling for specific commitments, others general or even vague. A special subcommittee headed by Senator Tom Connally, chairman of the Foreign Relations Committee, was organized in March to study a dozen proposals, among them the controversial Ball-Burton-Hatch-Hill (B2H2) measure which envisaged a postwar international organization akin to the League of Nations, equipped with an international police force.

Though the subcommittee stepped lightly lest its product provoke debate that would offend Allies, the months that followed saw both houses of Congress, acting separately but voting in great unison, give overwhelming approval to expressions that dovetailed into the diplomatic and political movements and actions of the executive branch of the Government. Senate debate was frank, at times bitter, disclosing that a form of "nationalism" remained in the wake of isolationism. But the fears of those who had sought indefinite postponement of the facing of postwar policy issues appeared to have been overemphasized. Rather than injuring military, diplomatic, or political programs, the carefully phrased and carefully handled House and Senate resolutions concededly aided Secretary of State Cordell Hull on his historic mission to Moscow in October that produced the Four-Nations Declaration and led up to the Big Three meetings at Cairo and Teheran.

The House, usually on the outside in such matters, took the initiative in postwar peace policy expression. Taking Congress by surprise, the Foreign Affairs Committee, headed by Representative Sol Bloom of New York, voted unanimously in June to report out a resolution composed by a rookie member of the House, J. William Fulbright, Democrat of Arkansas. It was brief, but all-inclusive, reading (as amended by only a few words to insure international agreement by constitutional processes) as

follows:

Resolved by the House of Representatives (the Senate concurring) that the Congress hereby expresses itself as favoring the creation of appropriate international machinery with power adequate to establish and maintain a just and lasting peace among the nations of the world, and as favoring participation by the United States therein, through its constitutional processes.

The House passed it by a 360-29 vote on September 21. The Senate Foreign Relations subcommittee went to work on a measure of its own, but it proceeded slowly, dreading not only possible debate repercussions but a concurrent resolution routine which would require conference adjustments and a carrying of the issues to the floors a second time. Desiring to avoid a blueprinting of commitments while the postwar picture still was necessarily vague, the subcommittee on October 13 reported to the full committee a Senate resolution declaring:

Resolved, that the war against all our enemies be waged until complete victory is achieved; that the United States cooperate with its comrades in arms in securing a just and honorable peace; that the United States, acting through its constitutional processes, join with free and sovereign nations in the establishment of international authority with power to prevent aggression and to preserve the peace of the world.

Senator Connally introduced it, saying to the B2H2 group, "this is the best you can hope to secure." The group, which sought a "stronger" measure, however, won at least a partial victory with the aid of Secretary Hull, given unwittingly in Moscow. The Four-Nations Declaration (in which China had joined the United States, Great Britain, and Russia) called for "a general international organization" to maintain the peace, a phrase viewed widely at the Capitol as fitting more by word than by the implications of the Committee (Connally) Resolution, into the program advocated by the Ball-Burton-Hatch-Hill group. Peace descended upon the Senate in mid-debate, and compromise was reached. Article 4 of the Moscow Declara-tion (covering the projected "general international organization") was written virtually without change into the Senate resolution. After inserting further language to safeguard its prerogatives to ratify treaties, and calling for postwar agreements to take treaty form, the Senate, on November 5 (vote, 85-5) gave its approval, in effect, to the Moscow Declaration in its own instrument. A new League of Nations was seen widely as being on the way. On December 6, Secretary of the Navy Knox, in an address before the English Speaking Union of Chicago, described the wartime working arrangement of the United States and British navies the "backbone" of "our postwar naval police force, already organized and functioning." This was accepted generally as a voicing of Administration policy.

Since August, 1941 (Atlantic Charter) the meetings between President Roosevelt and Prime Minister Churchill of Great Britain had become mileposts in the progress of the war. Each meeting resulted in a new turning point, a new battle strategy or grand plan or political decision of great moment. Washington reacted to their accomplishments, and the nation with it, with great enthusiasm. The decisions had been of a nature with which Americans had no inclination to disagree. From Cairo (Roosevelt-Churchill-Chiang) there came an answer to those, in Congress and out, who had argued that China was being neglected and the Japanese given only a token war while the concentration was upon the Nazi enemy. From Teheran there were further assurances that there would be no separate peace between Russia and Germany, and that a Second or even a Third Front had been agreed upon and was simply awaiting the proper target dates. These were the questions that the people of the United States wanted

answered, almost above all others.

To prevent recurrences of the monetary problems arising out of World War I, plans underwent study by the executive and legislative branches, programs contemplating stabilization of currency and pro-viding readier access to foreign exchange. The chief one followed the 1936 tripartite program of the United States, Great Britain, and France, calling for an International Stabilization Fund of \$5 billions, capitalized in gold, foreign exchange, bonds, and other contributions by participating governments, upon which each could draw to the extent measured by its participation. A new international currency, Unitas, would be established. A British plan, brought out by a group headed by Lord Keynes, proposed an international clearing house without assets, but through which members could borrow foreign exchange under a quota based on foreign trade during the last three years of peace. This organization's currency would be Bancor, valued in terms of gold, which could be bought with gold, though gold could not be bought with Bancor.

On October 8 the U.S. Treasury announced plans for a \$10-billions United Nations Bank for postwar reconstruction and development to augment the proposed international Stabilization Fund. This institution, taking a form similar to that of the RFC, would encourage private financial agencies to provide long-term capital for the proper development of productive resources of member countries. When necessary it would supplement private capital to further the program. Member countries would pay 20 per cent of their capital participation at the beginning in gold and currency. When the bank required additional capital it would call for supplementary payments on capital quotas, up to a limit of 20 per cent in a single year. Ten days later Secretary of the Treasury Morganthau arrived in Algiers on a tour to place the programs before Allied Governments. With the feeding of the postwar world a prob-

lem to be recognized long before the battles were fully won, representatives of forty-four nations representing 80 per cent of the world's population gathered at Hot Springs, Va., in May in a conclave made notable for its secrecy in discussion and program. Of all the nations represented, the United States was probably the only one which could provide, within itself, a complete healthful diet for its citizens. Plans tentatively agreed on were taken home for scrutiny. On November 10 the delegates met again, at the White House, and signed a formal agreement pledging their countries to cooperate, according to the ability of each, in feeding the peoples of the postwar world. The United Nations Relief and Rehabilitation Administration (the UNRRA) was created, with Herbert H. Lehman, former Governor of New York, as its director general. Work and planning was done at Atlantic City. The immensity of the job ahead was indicated by findings at the outset that Allied Europe would need 45,855,000 metric tons of imported goods for minimum requirements during the first six months after freedom from Nazi domination, of which 23,485,000 tons must go in ships. The cost of the entire program was estimated at \$2,500,000,000 with the United States share being from \$1 billion to \$1½ billion, and the United Kingdom's about \$625 million. About 90 per cent of the United States contribution, it was emphasized, would be spent for goods in this country.

For further detail in international developments, see United Nations.

Reconversion of American war industry back to peacetime production status figured in all domestic postwar planning. Bills began appearing before the first Congressional session ended. Recommendations for an entire legislative program were shaping up for presentation early in 1944. With the United States having filled the seas with war shipping, many interests, governmental and otherwise, cast eyes toward the postwar period. Experts of the International Transport Committee, United States Chamber of Commerce, gathered in Washington in September and found that a plan already was at hand in the Merchant Marine Act of 1936. It provided for private ownership and operation of steamship lines. Plans went forward on that basis. The war-accelerated expansion of aviation prompted steps to consolidate gains. American money and labor had established air bases at many strategic points throughout the world, and steps were being taken to preserve them, not only for military security but for postwar world trade by air. Within the United States the airlines, which, like the railroads, had stepped with mighty force into war and strained to new capacities, went to work on postwar plans that gave promise of service reaching into communities never before touched by air travel. As in the case of shipping, aviation built its programs upon the principle of private enterprise. (For postwar proposals initiated by industry and other nongovernment groups see Postwar Pranning.)

government groups, see Postwar Planning.)
Security. Sir William Beveridge attained world interest at the start of the year with a cradle-tograve British social welfare plan, calling for a minimum weekly income for all during unemployment periods, maternity benefits, full medical services, and respectable burial. An "American Beveridge Plan" on which the National Resources Planning Board, headed by President Roosevelt's uncle, Frederic A. Delano, had worked many months, was opened up to the United States soon afterwards. The President, giving it to Congress, suggested consideration at the current session, but it was not acted upon. Going beyond the British plan at points, the American proposals covered work on manifold Federal projects, Government "partnership" in private enterprise, and insurance to cover many economic hazards. Cost was not estimated. The plan, in effect, was introduced in June by Senator Wagner of New York, chairman of the Senate Banking and Currency Committee. The program would be financed at first principally by employers and wage earners to cover un-employment insurance, medical care, old-age, and disability benefits. It would expand the existing Social Security program to include approximately 15,000,000 farmers and agricultural workers, domestic servants, and professional and "little business" men. (For present Social Security set-up, see SOCIAL SECURITY BOARD.)

Veterans. Although the war was at its height, nearly 1,000,000 service men, whose economic lives had undergone abrupt dislocation had been discharged. New problems arose and programs came forth

In response to general Presidential recommendation, the Senate on December 17 passed a bill to provide mustering-out pay, ranging from \$200 to \$500, depending upon length and place of service, to honorably discharged veterans, men and women, up to and including the rank of colonel or comparable rating. House consideration was likely early in 1944. Mr. Roosevelt also urged "early action" on an educational program for discharged service men, financed by the Federal Government but administered by States and local communities. The first report of the Armed Forces Committee on Postwar Educational Opportunities for Service Personnel, appointed nearly a year before, formed the basis for the President's recommendation. The cost was estimated at about \$1 billion. This would supplement the legislation

designed to provide for credits on social security participation during war absences and for unemployment benefits ranging from \$15 to \$25 a week, according to dependency status. (See also VETERANS' ADMINISTRATION.)

#### FOREIGN RELATIONS

On the first anniversary of the Pact of the United Nations, President Roosevelt said: "Our task on this New Year's day is three-fold: First to press on with the massed forces of free humanity until the present bandit assault upon civilization is completely crushed; second, so to organize relations among nations that forces of barbarism can never break loose; third, to cooperate to the end that mankind may enjoy in peace and freedom the unprecedented blessings which Divine Providence through the progress of civilization has put within our reach." Thus, he sounded the policy upon which bold diplomatic strokes (some creating doubt and apprehension but most appearing justified by developments) were based, and which guided the nation and its Congress toward the closest harmony, as to foreign relations, that had been known in generations.

The foreign relations program was put upon a long-term basis. Postwar views were sought and received from many quarters through conferences in Washington with Anthony Eden, British Foreign Secretary; Gen. Henri-Honoré Giraud, who had won favor with the Administration in the fast-changing French political situation, and other distinguished visitors and consultants. Accent was on the reinforcement of understanding with Russia, which, despite that nation's tremendous sacrifices and valiant battle successes over Germany, had been endangered by words and incidents to a point where, in March, Vice-President Wallace asserted that "unless the Western democracies and Russia come to a satisfactory understanding before this war ends, I very much fear that World War No. 3 will be inevitable. Without a close and trusting understanding between Russia and the United States there is a grave probability of Russia and Germany sooner or later making common cause."

During the seeking of harmony among nations it was brought into the open in August that harmony was lacking within the State Department itself. While the general foreign relations policy of the Government was clear and known to the world, differences over specific policies relating to many individual international problems, it was asserted, developed to an extent that impaired the efficiency of this vital department. A break between Secretary Hull and Sumner Welles, Under Secretary of State, was known to observers to be coming and it came, openly, on September 25 when Mr. Welles resigned. President Roosevelt appointed Edward R. Stettinius, Jr., the youthful industrialist who had come to the Government war establishment first as a key man in the production field and later became Lend-Lease Administrator, in Mr. Welles' place.

While the Government was compelled to tread cautiously in many of the situations which developed between the explosive French factions, it struck decisively late in April at strategically situated Martinique, having lost patience with Vice Adm. Georges Achilles Marie-Joseph Robert, High Commissioner of Martinique (q.v.) and Guadeloupe, who since the fall of France in 1940 had enveloped his aims and programs in mystery. Severing diplomatic relations, the State Department announced that the Government would not "rec-

ognize or negotiate with any French Republic in the Antilles who remains subservient to or maintains contact with the Vichy regime." This got results with the French with whom the Government had been dealing. Robert disappeared from the

The French political and military situations were as shifting as the sands, moving from one delicate and discouraging aspect to another, but with heartening developments occurring periodically. There was no turning from the Allied policy of seeking the cooperation of all anti-German French groups and bringing together the rival Giraudist and deGaullist factions. See France under *History*.

American diplomacy had sought to avoid politics in this problem. It got politics. But, be it emphasized, though it dealt in its bewildering complexities with conflicting personalities, it found true

Frenchmen on both sides.

At times the zeal of the French led to situations that threatened disruption of the whole Mediterranean situation, when it appeared that the careful seeking of Arab cooperation with the Allies would erupt into chaos and tragedy. The Levantine disturbances in November presented such a danger. See Syria and Lebanon under History.

As the year closed the agreement reached between the late Adm. Jean François Darlan and Lieut. Gen. Mark W. Clark soon after the Allied landings in North Africa was being revised, at the request of the French Committee of National Liberation, to eliminate provisions which the deGaullists thought impaired French sovereignty.

A small, proud woman brought the United States closer to an understanding of China's long and brave fight for all democracy. Mme. Chiang Kai-shek, wife of the Generalissimo, visited the White House in February, appeared before Congress for two history-making addresses and later, despite serious illness, toured the country. To the lawmakers she spoke bluntly. She had found that opinion seemed to consider defeat of the Japanese relatively unimportant until Hitler was beaten. This, she said, was "not borne out by the facts." Mme. Chiang hit upon a controversy that had waged for weeks within Congress, where some believed the United States should even withdraw forces from Atlantic and Mediterranean theaters to launch the full-scale assault upon Japan. Later developments showed that the defeat of the Japs had not been "relatively unimportant" and that the massing of men, machines, and materiel had been constant. When the tempo of the offensive against Japan was accelerated it was with great effect, though the terrible cost of the slow but steady movements toward the heart of the Japanese Empire was brought home with stinging effect with the capture of Tarawa, in which the U.S. Marines "paid the stiffest price in human life per square yard of any action in the 168-year history of the Corps."

Congress, upon recommendation of the President, acted in November to rectify "a historic mistals," has a reciping from the attribute all Chinase Franchischer take" by erasing from the statutes all Chinese Exclusion Laws, some reaching back to 1882. Thus a second gesture toward the Asiatic ally was made within a year, the United States having joined with Great Britain in 1942 in renouncing the extraterritorial rights in China that had prevailed for a

century.

Only two Latin American countries remained neutral as 1943 began, but in the first month Chile broke relations with the Axis, leaving Ar-gentina the lone neutral among 21 American republics. Bolivia (in April) and Colombia (in

November) went beyond mere severing of relations and declared war. On June 4, the Government of Argentina (q.v.) was overthrown, for the seventh time, by revolution. President Ramon S. Castillo, who had maintained a state of siege since Pearl Harbor, gave over Casa Rosada, the Government House at Buenos Aires. Gen. Pedro Ramírez, the new President, who had been counted on to break with the Axis, gave no signs of doing so. Argentina appeared to want to bargain for Lend-Lease equipment. Foreign Secretary Segundo Storni in August suggested "a gesture of friendship" in the form of United States lendlease arms and oil-drilling machinery. Secretary Hull, in response, rebuked the Argentine Government for requesting arms for a purpose inconsist-ent with "the juridical and moral" bases of Pan American understandings and agreements. His blunt reply shook the Ramírez Government to its foundations and increased the tension with Washington. See ARCENTINA under History

Revolution also came upon a republic that had broken early with the Axis, Bolivia. On December 20 a swift military coup by a group of army officers headed by Victor Paz Estenssoro, ex-Minister of Economy, ousted President Enrique Peñaranda and placed a mixed army-civilian junta in power. Assurances were given promptly that the action was in no wise hostile to the United States. Official Washington did not appear to be disturbed at first. Soon, however, there developed a possi-bility that the revolution had been Axis-inspired. The State Department withheld recognition as further investigation indicated that Axis plotters were involved. See Bolivia under History.

United States relations with Latin America were jolted in late November when Senator Hugh A. Butler, Republican of Nebraska, after a tour through 20 Central and South American republics, delivered a 176-page report to the Senate alleging that the U.S. Government was lavishing \$6 billions on wasteful projects that were spawning contempt and suspicion for the United States. Most of the projects, he held, had little or nothing to do with the war and were arraying nation against nation. Vice-President Wallace denounced the report as a "shocking slur." Senator McKellar, acting chairman of the Senate Appropriations Committee, after having received official rebuttals from all government agencies involved, reported that Senator Butler had been shown to be "95 per cent wrong." Secretary Hull, in a formal statement, called the Butler report a "wholly indefensible attack" on the Good Neighbor policy through "inaccuracies, fallacies, misstatements and gross representations." A House Military Affairs subcommittee returning from a base-inspection tour in Central and South America, reported that the Good Neighbor policy had produced mutual benefits throughout the Western Hemisphere, but contended that "bungling tactics by amateur goodwill emissaries who bid against each other have created confusion and injured American understanding.

See the articles on all foreign countries under

History.

# CONGRESS

The first session of the Seventy-eighth Congress convened on January 6 and adjourned formally December 21, closing the first materially broken meeting since 1938. Weary and jagged, it had taken a 67-day midsummer recess from July 8 to September 14. The second session will convene Jan. 10, 1944. The Senate, at the end of the first session, had a membership of 58 Democrats, 37 Republicans, and one Progressive; the House of Representatives, 218 Democrats and 208 Republicans (in 1934 there were 322 Democrats to 103 Republicans and 10 representatives of minor paries), two Progressives, one Farmer-Laborite, one American-Laborite, and five vacancies. The vacancies had deprived the Democrats of four votes and the Republicans one. Thus, the Democrats, as the second session was about to start, had a numerical majority of a single vote, a situation strange to the Roosevelt Administration. (For a list of members, see House of Representatives and Senate.)

The President of the Senate was Vice-President Henry A. Wallace, the majority leader Alben W. Barkley of Kentucky, and the Democratic whip Lister Hill of Alabama. Charles L. McNary of Oregon was the minority leader, but Wallace H. White, Jr., of Maine, was acting minority leader because of the illness during the closing weeks of the session of Mr. McNary. The Speaker of the House was Sam Rayburn of Texas, the majority leader John W. McCormack of Massachusetts, the Democratic whip Robert Ramspeck of Georgia. Joseph W. Martin, Jr., of Massachusetts was minority leader. Leslie C. Arends of Illinois was minority

whip.

Work of Congress. The Seventy-eighth Congress called itself the "Victory Congress." Sons of its members appeared on the casualty lists. Political parties, as such, were forgotten as issues involving the actual fighting of the war and cooperation with the Allies for preservation of peace, when it comes, arose. The unity that marked the pledges and expressions for postwar collaboration, which came in almost perfect timing with diplomatic and political developments abroad, astonished even the most optimistic of the veteran participants and observers on Washington's Capitol Hill. The session's principal completed acts were those of appropriations, authorizations for prosecution of the war, taxation (to the extent it thought feasible), and strike control. The fighting fronts and the domestic front, however, were kept quite separate and distinct in the record of the first session of the Seventy-eighth.

It adjourned leaving several major controversies, some of them involving the critical issues of holding the anti-inflation line, still in hot progress. Whether the Congress would approve an expanded food subsidy program for rolling cost-of-living prices back was left in abeyance by a 48-day extension of the existing one. Whether Congress would support a wage increase for 1,100,000 nonoperating railway workers, rejected by the Director of Stabilization as inflationary, was an issue that was confounded by sudden Government seizure of the railroads (the Senate already had approved the rise). Congress was split bitterly over methods of enabling absentee service men to participate in the election next year of the President, Vice-President, and the Seventy-ninth Congress. Legislation providing mustering-out pay to honorably discharged veterans was only partly completed. Many postwar problems awaited study and recommendations.

Under the pressures of war Congress appropriated lavishly, then began scrutinizing its works, setting up accountancy systems of its own to go into the "justifications" of departments and agencies. The policy was found to be wise. No department or agency suffered from a lack of necessary funds; some found, on their own account, that they had overestimated their requirements, the War Department by at least \$13 billions. The

Byrd Economy Committee, finding almost \$100 billions in uncommitted balances held by the War and Navy Departments alone, set out to discover how much could be returned to the Treasury.

Congress realized the prerogatives and responsibilities of the executive branch in the conduct of the war, but it drew its lines. On the domestic front it was critical and at times belligerent. Among the most severe of the critics of domestic programs were Democrats. These, with the growing force of Republicans in both Senate and House, imperiled or defeated home front projects where the issues concerned what were denounced as "coddling" of labor, bureaucratic "government by directive," abuses of delegated powers by agency heads and "ideologists down the line," and Administration methods of combatting inflation by means of consumer subsidies. As to taxes, partisanship again appeared to lose its identity in a general Congressional disagreement with the President and the Treasury Department over the extent to which levies upon income, individual and corporate, should be imposed. This disagreement was sharp. Congress set out to give the Administration only one-fourth of the revenues it had asked. The second tax bill of 1943 was still pending when 1944 began with no signs of compromise evident.

Direct appropriations during the session totaled \$114,592,591,235, with \$59,034,839,673 approved for the Army July 1, following \$27,637,226,198 for the Navy (on June 26), which later was augmented by \$3,836,176,119 in a supplemental allotment. The other war agencies were given \$2,911,697,224 (July 12) and an additional \$6,273,629,000 was voted for Lend-Lease and approved June 14, after Congress, observing the growing reciprocity of this unprecedented program, had approved its continuance for another year. Yet, a few months later a special Senate Appropriations group, named after Senators touring battlefronts had made their report, was investigating all Lend-Lease outlays (then nearing \$24 billions), not begrudgingly but to see that it had been administered in keeping with the spirit of its authorizations.

With United States crops now vital to the whole world, Congress in May put \$26,100,000 into recruiting, training, and transporting a land army, and supplemented this with \$30,000,000 more in December. It first permitted 225,000,000 bushels of wheat to sell at the parity of corn to feed meat-producing livestock and poultry (in March) and increased the allowance in June to 275,000,000 bushels. It balked, through its powerful farm groups, at the Administration's consumer subsidy program in the summer, and again in the autumn, and left the issue open when the Christmas recess set in. The Commodity Credit Corporation, principal subsidy-paying instrument, went forward until Feb. 17, 1944, but under pledges that it would not subsidize beyond a rate of some \$1 billion a year, or include new commodities. The Administration contended that it must go further to combat inflation effectively.

With no hesitation Congress permitted the legal debt limit to rise from \$125 billions to \$210 billions in April (the debt had been \$26 billions at the end of World War I, and down to \$16 billions in 1930, and up to \$49 billions by 1941), but it added a rider to the authorization which prompted the President to take it without endorsement by signature. By this rider Congress, in effect, repealed the President's executive order which sought to hold the maximum individual earnings of any unmarried individual to approximately \$25,000 a

year, after taxes, or a married one to \$50,000. Congress extended to June 30, 1945, the \$2-billions exchange Stabilization Fund, built from proceeds of 1934's dollar devaluation, but concluded as of June 23, 1943, the President's power to alter the gold content of the dollar, which had been given in the Agricultural Adjustment Act of 1933. In July it enacted legislation to curb the activities of "contract brokers" who had built up a nationwide practice declared to be wholly unnecessary for the procurement of war business. Though trade routes were disrupted or paralyzed by war hazards, Congress extended the reciprocal Yankee Trading program of Secretary of State Hull for two more years with rousing majorities. two more years with rousing majorities.

There were two tax bills in 1943, but only one was enacted. The first was completed late in May, the other left for 1944 decision. The pay-as-you-go plan of Beardsley Ruml featured the first contest. Means of bringing a large segment of American taxpayers to a current payment basis was accomplished, but with a compromise that brought new confusion to higher-bracket income taxpayers. (See

TAXATION.

On October 1, the Treasury, seeking \$10,500,000,000 of new money, put before the House Ways and Means Committee a program for income taxes starting at 21 per cent (instead of 13 per per cent) and a lowering of personal exemptions to raise an estimated \$6,600,000,000, the rest to be made up by increased corporate levies, excise imposts, and estate and gift taxes. The committee rejected the program as "an intolerable burden" and Chairman Doughton took a \$2,139,300,000 bill before the House, terming the \$16 billions inflationary gap of which the Administration warned "a statistical abstraction" and declaring that too heavy a tax burden was "as great a danger to the nation's economy as is a too large public debt." The House, agreeing, took the bill.

The Senate Finance Committee increased the potential yield by \$136,300,000 and moved to freeze social security taxes at the existing I per cent rate for another year. It rejected the Treasury's proposals to integrate the Victory tax with regular income levies, which would have removed 9,000,000 taxpayers from the rolls, and the House-adopted plan to repeal the Victory Tax and increase the normal rate from 6 to 10 per cent and provide a special 3 per cent impost on the

lower income groups.

Congress, suspicious of uses made of the wellstocked special emergency fund given the President (as some Administration agencies upon which Congress had frowned and to which it had cut or denied appropriations kept on functioning) put limitations upon its use, excepting, of course, the meeting of war emergencies. Acting more directly, it denied funds for the continuance of the National Resources Planning Board, though it had just submitted the "American Beveridge Plan"; ordered the National Youth Administration, long a controversial organization because of its alleged Communistic leanings, disbanded, and terminated the Guffey Bituminous Coal Act and the machinery it created to stabilize the industry. It decreed the liquidation of the Home Owners Loan Corporation as rapidly as would be safe to American realty markets and brought the WPA program to an abrupt halt on July 1.

Investigations. Although Congress had kept away from the actual conduct of the war, leaving this to the executive branch, it sponsored an investiga-tion that reached to all the fighting fronts of the global war. The Senate sent five of its members

(Russell of Georgia, Chandler of Kentucky, Mead of New York, Democrats, and Lodge of Massachusetts and Brewster of Maine, Republicans) on a tour covering approximately 40,000 miles. Their findings, reported in secret sessions where secrecy did not hold, provoked controversies and reper-cussions abroad, but the Washington consensus persisted that the investigation had done much, here and overseas, to promote understanding between the United Nations. The committee returned with criticisms, some of which were misinterpreted abroad, for they were meant to be directed more at the shortcomings of the United States' representatives overseas than at operations and preparations of the Allies.

The Senators reported that members of the United States missions overseas lacked alertness and were left standing by, perplexed and ineffec-tive in this move and that, while representatives of Allied nations appeared to be gaining economic advantages that would reflect to American disadvantage in postwar readjustments. The principal reason for this, the Senators contended, was a distinct lack of *national* policy on the part of the United States. American labor and money had built military bases to which the United States would have no postwar rights, lend-lease materials were being distributed under a system which left in doubt the true donor, United States zealots were spending heavily "to sell the Indians on the American way of life"; these and other reports were brought back to the Senate.

It was a year of many Congressional investiga-tions. The Senate (Truman) Committee continued delying into many phases of the war program, revealing that, besides waste of public funds in the production of material, the Army itself could (and did) reduce materially the wastage of food. It found that, through falsifications, defective materials had gone into some aircraft, that steelmaking specifications had been misrepresented, that labor and management both shared responsibility for failure to meet aircraft production schedules, that the Army, under wraps of military secrecy, had spent \$100,000,000 on a \$134,000,000 oil development in Canada which it asserted to have little if any military value. It warned that the nation's transportation system, under its greatest war stresses in history, faced possible breakdown through a lack of replacement equipment. These are only random samples.

The Senate (Kilgore) Committee, finding a need for decisiveness in policies, sought a concentration of civilian authority to replace the divided powers that headed up the manpower, production, and procurement programs of the war. To an extent that remained to be determined at the end of the year its recommendations came true with the establishment of the Office of War Mobilization

The Byrd Congressional-Departmental Joint Economy Committee continued to score through constant batterings against excessive Government employment (the Federal establishment rolls were cut to far below the 3,000,000 peak of earlier in the year), continuance of expensive sociological programs, the Government's enormous realty operations, and practices in general that were deemed to stifle private enterprise and individual initiative.

Many excursions into alleged abuses by officials and subordinates of powers delegated to the executive branch by Congress were made by the House (Smith) Committee, which reported, as one example, that the OPA had set up "a government of its own," with executive, legislative, and judicial branches, and called for the rewriting of the Price Control Act to protect the people from its edicts.

The House (Dies) Committee on un-American Activities investigated evidences of "coddling" of Japanese evacuees, a large part of them assertedly openly hostile to the United States, at the Tule Lake, Calif., center, where outbreaks of disorder occurred. The House (Kerr) Committee, which prompted Congress to remove three minor officials from the Government payroll because of past identification with allegedly subversive groups, faced a court test of the constitutionality of its action. At session-end, the special Senate (Van Nuys) Committee assigned to see whether prevailing liquor shortages were real or artificially created, was in the midst of its probings, while the House committee investigating the Federal Communications Commission continued its work under the chairmanship of Representative Lea of California, after Representative Cox of Georgia, who had initiated the inquiry, resigned "to free the committee" of personal attacks which had been made against him.

Enactments. There follows a brief summary of important measures enacted during the First Ses-

sion of the Seventy-eighth Congress:

War Labor Disputes Act, vetoed by President Roosevelt June 25 and enacted over his veto the same day: Presidential powers to take over plants under Sec. 9 of the Selective Service Act of 1940 were extended to any plant, mine or facility equipped for the manufacture, production, or mining of articles required or useful to the war program, and may be exercised where there exists an interruption of operations due to strike or other labor disturbance. Plants so seized must be returned to owners as soon as possible, but in no case more than 60 days after resumption of prior productive efficiency. It is purely a wartime measure. It gives statutory status to the National War Labor Board, which had been "ignored" by John L. Lewis, president of the United Mine Workers as only a creature of Presidential executive order.

During possession of a plant or mine the terms and conditions of employment remain as those in effect at time of seizure, but the Government agency operating it is given authority to apply to the National War Labor Board for a change in wages or conditions of employment and the board, after hearing, is authorized to order fair and reasonable adjustments. It is unlawful for any person, association, or corporation to coerce, induce, conspire with, encourage, or aid any lockout, strike, stoppage, slowdown, or other work interruption, or for any person, association, corporation, or other group to interfere with operations by giving direction or guidance, providing funds or the payment of strike or other unemployment benefits to participants, with violators being subject to fines up to \$5,000 or imprisonment up to one year, or both. Upon its own motion or when the U.S. Conciliation Service certifies that a labor dispute exists that may interfere substantially with the war program, the NWLB is authorized to take jurisdiction and decide the issues, but must conform in its decisions to the Fair Labor Standards Act, the National Labor Relations Act, and the Emergency Price Control Act. The act requires that notice of labor dispute which threatens production be given to the Secretary of Labor, the NWLB, and the National Labor Relations Board and that for not less than 30 days the contractors and workers continue production without interruption. On the thirtieth day, if the dispute is not settled, the NLRB is required to conduct a secret strike ballot among the employees involved. See LABOR CON-

DITIONS under Federal Labor Legislation.
Fathers Draft Act, signed December 10: This law seeks to place pre-Pearl Harbor fathers (parents of military age with children born before Sept. 15, 1942) at the bottom of the military manpower pool on a nationwide basis, but provides that the rule shall not apply with such rigidity as to prevent the regular required flow of inductees into the armed forces. It proposes to do away with the "work or fight" program through which the War Manpower Commission sought to shunt militaryage registrants, regardless of marital or dependency status, either into essential war occupations or into the draft by means of nondeferable lists. It proposes that a medical commission, with civilian representation, be created to determine whether physical, mental, and moral requirements of the army and navy can be lowered with safety so as many as possible of the 3,400,000 registrants in 4-F classification, rather than fathers, may be inducted. See Selective Service System.

Servicemen's Dependency Allowance Act, signed October 26: Amending the law of 1942, it increased allowances and extended the benefits to all grades of enlisted men and established a new grade of dependents (Class B-1) consisting of parents, brothers, or sisters dependent upon the enlisted man for their chief support. For Class A dependents (wife, children, or divorced former wife) the allowance remains at \$50 a month, but for the first child it was raised from \$12 to \$30, and the allowance for each additional child was raised from

\$10 to \$20.

Veterans' Rehabilitation Act, signed March 24: Extends to those serving in the armed forces during the present war the veterans' pension laws of the first World War, subject to the provisions, regulations, and limitations of Veterans' Regulation No. 1 (a), Part VII. It provides that veterans be rated as totally disabled and entitled to compensation on the basis provided under the World War I Veterans Act of 1924 during a course of training which shall not exceed four years, nor receive training beyond six years after termination of the war. A \$5,000,000 revolving fund is provided for making advances, not exceeding \$100 each, to trainees.

Naval Courts Martial Act, signed March 22: Extends jurisdiction of naval courts martial, in wartime, to all persons serving with or accompanying the U.S. Navy, Marine Corps, or Coast Guard, persons engaged in naval projects and within areas under control of the Secretary of the Navy.

Lend-Lease Appropriations Act, signed June 14: Appropriated \$6,273,629,000 to carry out the provisions of the Lend-Lease Appropriations Act of Mar. 11, 1941. The 1943 fund was made available until June 30, 1944, its major items being \$4,452,623,000 for agricultural, industrial, and other commodities; \$1,552,659,000 for ships, vessels, boats, and other water craft, equipage, supplies, materials, spare parts, etc., and \$8,999,000 for administration. A provision was inserted to prohibit use of the money for the payment of any subsidy on agricultural products produced in the continental United States. See Lend-Lease Program.

Current Tax Payment Act, signed June 9: This measure changed the system of tax payments but not the basic rates or exemptions. It provided for collection at the source from wages or salaries at a rate of 20 per cent above withholding exemptions, beginning July 1, 1943, and for current payment of liabilities not collected at the source on the basis of quarterly declarations. Three-fourths of

the 1942 tax liability was cancelled, with the remaining quarter payable in two equal installments in March of 1944 and 1945. The additional yield of revenue for 1944 was estimated at about \$5,000,000,000, carrying total collections to some

\$18,000,000,000.

The withholding tax was designed to include the Victory Tax, plus the normal levy and the first bracket of surtax. Exemptions are \$624 for an unmarried person and \$1,248 for a married person, and \$312 for each dependent. Employers are allowed to determine the amount to be withheld, on the basis of marital status information supplied by the employe, either by precise computation or by use of simplified tables. Employers are required to file quarterly returns but may remit withholding taxes monthly, under Treasury Department regula-

As the withholding applies only to wages and salaries and not to discharge currently the tax liability in excess of the first surtax bracket, taxpayers with more than nominal income from nonwage sources and those whose compensation moved into higher brackets were required to make a declara-tion of estimated tax by March 15 each year. Payments of estimated tax (less the estimated amount withheld at source) are to be made quarterly. Farmers are allowed by regulation to file their dec-larations of estimated tax at any time prior to December 15 of each year because of the sea-

sonal nature of their income.

The regular March and June tax installments were required as usual in 1943 (as the act was not passed until mid-year) but those payments were applied to the 1943 tax. Taxpayers whose current liabilities were not discharged in full by collection at the source were required to file a declaration by September 15, estimating 1943 tax and subtracting the amount paid in March and June, plus income and Victory tax withheld at the source for the year. Any balance was payable, onehalf by September 15 and the rest by December 15. A final return for 1943 is due by Mar. 15, 1944, at which time under or over payment will be adjusted. See Taxation.

Public Debt Act became law without the President's signature on April 10: This measure increased the statutory debt limit under the Second Liberty Loan Act from \$125 billions to \$210 billions. It rescinded, as of Oct. 2, 1942, the Presidential executive order (No. 9250) which sought to limit salaries to a maximum of \$25,000, after taxes. It also amended the anti-inflation act of Oct. 2, 1942, so as to provide that no action shall be taken under the authority of that statute regarding wages or salaries which would be inconsistent with the Fair Labor Standards Act or the National Labor Relations Act, or for the purpose of reducing wages or salaries for any particular work below the highest paid therefor between Jan. 1, 1942, and Sept. 15, 1942.

Dollar Stabilization Act, signed April 29: This extended to June 30, 1945, the powers conferred upon the President under Subsection (c), Sec. 10 of the Gold Reserve Act of 1934 relating to stabilization of the exchange value of the American dollar, but contained no provision for continuing the authority of the chief executive with respect to the gold content of the dollar (expired June 30, 1943). The act also provided that the Stabilization Fund shall not be used in any way under which its direct control and custody would pass from the President.

War Contract Fees Act, approved July 14: Sets out to prevent the payment of excess fees in con-

nection with the negotiation of war contracts. It authorizes departments involved in contracting to control fees received by manufacturers' representa-tives or "contract brokers" by defining their contracts or agreements with their principals as "subcontracts" under the renegotiation law. The definition of "subcontractor" is expanded to include agents who receive commissions or fees that are contingent upon the getting of government business, or those whose services consist of soliciting or procuring contracts or subcontracts. It includes those operating on salary or fixed compensation basis. All provisions are retroactive to Apr.

28, 1942.

Land Army Act, signed May 5: For the recruiting, training, and transporting and providing an adequate supply of workers for producing and harvesting agricultural commodities essential to the war program, the measure appropriated \$26,-100,000, to be spent under the direction of the War Food Administrator, provided not less than \$9,000,000 nor more than \$13,050,000 be used to pay States for expenditure by the agricultural extension services. It prohibited the use of funds to impose minimum wages or hours, housing standards or enforce collective bargaining requirements or union membership except with respect to work-

ers imported into the United States.

Reciprocal Trade Act, approved June 7: Extended to June 12, 1945, the authority of the President to enter into foreign trade agreements under Sec. 350 of the Tariff Act of 1930, as amended by the act of June 12, 1934.

War Shipping Amendments, signed March 24: Provides that officers and crew members employed by or on behalf of the United States through the War Shipping Administration, together with their dependents and beneficiaries have all the benefits, exemptions, privileges and liabilities of seamen employed on privately owned and operated American ships as regards death, injury, illness, maintenance, cure, loss of effects, detention, or repatriation, Federal Social Security, public health service and employment tax laws, allotments, collection of wages, etc. Those covered are not entitled to benefits of or subject to charges under the United States Employment and Compensation Act or Civil Service Retirement Act.

Philippines Presidency Act, signed November 12: This measure provided that notwithstanding provisions of the amended Constitution of the Philippines, Manuel Quezon, President, and Vice-President, and Constitution of the Philippines, Manuel Quezon, President, and Vice-President, and Constitution of the Philippines of dent Sergio Osmens (in exile) shall continue in office until the President of the United States proclaims that constitutional processes and normal functions of government are restored in the Philippine Islands. At that time the act provides, the tenure of President Quezon shall cease and the Vice-President become President until a successor is elected and qualified under the Constitution and laws of the islands.

Telegraph Merger Act, signed March 6: Provides authority for telegraph companies, upon approval by the Federal Communications Commission, to merge or consolidate in the public interest. It required the FCC to hold hearings at which representatives of governors of States involved, Secretaries of State, War, and Navy Departments, the Attorney General, and employees be heard. Consolidations would result in divestment of international operations within reasonable time. Employees on rolls on or before Mar. 1, 1941, would be continued in employment not less than four years from date of merger without reduction of compensation or assignment to work inconsistent with their training or experience; those discharged as a result of a merger would be entitled to severance pay computed by multiplying the compensation they would have received for the full four-week period preceding the discharge by the number of years of continuous service immediately preceding. The act also protects pension, health disability, and death benefits, status of employees on military leave, and rights under existing collective bargaining agreements.

For other measures, see Education; Flood Con-TROL; FOOD INDUSTRY; IMMIGRATION; NEWSPAPERS; SILVER.

Major Appropriations. Military Establishment Act, major Appropriations. Mutuary Establishment Not, signed July 1: Appropriated \$59,034,839,673, with major items, beyond general upkeep, including: Air Corps, \$23,655,481,000; Signal Corps expansion, \$4,646,168,000; Service and Supplies, \$7,992,522,000; transportation, \$1,552,583,000; Engineers, \$2,472,401,500.

Naval Appropriation Act, approved June 26: Appropriated \$27,637,226,198, with principal items including \$1,735,880,000 for ships and maintenance; \$2,983,725,000 for aviation; (plus \$2,000,000,000 for contract authorizations); \$6,324,120,-000 for increase and replacement of naval vessels; \$1,594,000,000 for armament and ammunition, and

\$1,200,000,000 for emergency construction. Supplemental Naval Appropriation Act, signed March 31: This appropriated \$3,836,176,119 to meet requirements of the Naval Reserve, Bureau of Ships, ordnance and stores, pay for naval personnel, the Bureau of Yards and Docks, naval aviation, armament and ammunition, and the

Coast Guard.

National War Agencies Appropriation Act, approved July 12: Appropriated \$2,911,697,224 to meet the expenses of the score of war agencies

functioning under the White House.

First Deficiency Act, signed March 18: Appropriated \$4,106,261,194, to increase the construction fund of the U.S. Maritime Commission, give \$3,250,000 to the National War Labor Board, \$685,000 to the Office of the Petroleum Administrator for War, and \$40,000,000 to the Public Roads Administration for access war roads. C. P. Trussell.

UNITED STATES COMMERCIAL CORPORATION. See United Kingdom Commercial Corporation.

UNIVERSITIES AND COLLEGES. According to the Educational Directory, published by the U.S. Office of Education, there were 1,702 institutions devoted to higher education in the United States in 1943. The

distribution of these institutions by type, student body, and control, and enrollment for the period of Oct. 15, 1942, through Oct. 15, 1943, are shown in the following tables.

It was reported that, exclusive of all military enrollments, 66,000 men and 152,000 women entered colleges for the first time in the fall of 1943, as against 203,640 men and 149,900 women in 1942. The enrollment of nonmilitary students in 1943 is estimated at 761,630, including 255,440 men and 506,190 women, and represents a drop of 35.8 per cent for all students, a decrease of 67.6 per cent for the men and 1.4 per cent for the women. Of the year's grand total, 384,050 were assigned for specialized training by the armed forces.

Based on returns from 882 institutions. Based on returns from 843 institutions.

The extensive use of colleges and universities as Army and Naval training centers apparently has been the medium through which the four-year institutions have kept in operation. In 1943 there was no record of the closing of a college, compared with three colleges closed and one merged in 1942. However, in contrast, the junior colleges did not fare so well; according to the American Associa-tion of Junior Colleges, 77 such institutions have suspended or closed permanently as a result of the war. Fifty-one of the two-year colleges closed during 1943. Considered in this light the picture appears darker than is actually the case, for many of the junior institutions that suspended were small, marginal colleges and none of the institutions forced to close enrolled a large student body. And, although the regular junior college enrollment showed a decline of 15 per cent, the total number of students in these institutions reached the record number of 326,000. The trend toward decrease

in the teachers' colleges and normal schools continued in 1943; their enrollment coming to only about 40 per cent of the number preparing for a teaching career in 1939–40, and a drop of 14.7 per cent from 1942. The combined drop for all institutions in 1943 was 8.2 per cent, making a loss of 11.6 per cent of men and 3.5 per cent of women in a year.

Trends. The rapidly growing interest among colleges and universities in the adjustments needed to meet postwar problems was evinced in the several conferences held by representative educational leaders, who evolved the setting-up of the necessary machinery to consider such problems as the assumption that Congress will give consideration to Federal participation in a program of education for men and women mustered out of the armed services and thereby involve an answer to fitting men for jobs through full-time vocational education and providing cultural and civic education for those qualified, etc.; to adjust educational programs to meet the needs of ex-service personnel and of other students; and to find the key to the proper placement of returning service men and women in educational institutions.

In a pamphlet issued by the Universities Committee on Postwar International Problems, the place that should be given to education was analyzed under the following two main assumptions: (1) there should be established a permanent organization of nations for the maintenance of secure and lasting peace and (2) to make education an important function of that organization.

In the interests of its graduates killed in action, Boston University has become the first institution of higher education to establish scholarships by which the children of these men may be granted

free and full tuition.

An educational lend-lease plan has been established after two years of study by educators in the United States and abroad that will enable persons from the occupied countries to begin immediate training in American colleges, universities, and technical schools to prepare themselves for work in specific fields of reconstruction and rehabilitation in their own lands after the war.

In what is known as the Specialized Training Program, the Army and Navy have taken over in whole or in part some 300 colleges (see Education). These particular institutions are indicated in the table (pp. 683-696) by asterisks or daggers. In December, 1943, it was reported that 223 Army Specialized Training Program units were in operation at colleges and universities, as follows:

| Field  | Units  |
|--|--------|
| Basic Phase Curriculum                                     | 168    |
| Advanced Engineering (in 5 different curricula)            | 71     |
| Premedical (to be expanded to about 50)                    | 10     |
| Area and Language Studies (giving instruction in 18        |        |
| European and 14 Asiatic languages and the appropriate      |        |
| areas in which these languages are used)                   | 55     |
| Personnel Psychology (in 4 units this instruction has been |        |
| completed)   | 3      |
| completed)   | 3<br>3 |

It was expected that by April, 1944, the rate of graduates from these Army programs would exceed 10,000 a month.

The table (pp. 683-696) lists the accredited colleges and universities of the United States with statistics supplied by the institutions for the academic year 1942-43 (unless otherwise noted in footnotes). The list includes those institutions which are accredited (according to the 1943 Educational Directory) by one of the seven national or regional accrediting associations, namely the Asso-

ciation of American Universities (national), the New England, Middle States, North Central, Southern, and Northwest Associations of Colleges and Secondary Schools (regional), and the American Association of Teachers Colleges (national).

See EDUCATION and the other topics there listed.

uruguay. A South American republic. Capital,

Area and Population. Area, 72,153 sq. mi.; population, estimated at 2,146,545 on Jan. 1, 1940. In 1940 living births numbered 42,893; deaths, 20,695. The inhabitants are almost entirely of European descent, with Spanish, Italian, and Portuguese strains predominating. The language is Spanish. During 1940 2,291 foreigners entered the country from overseas and 1,390 departed. The population of Montevideo, with suburbs, was estimated at 770,000 in 1941. Paysandú had about 40,000 in 1940; Salto, 35,000; Mercedes, 24,000. Defense. A bill for the establishment of compul-

Defense. A bill for the establishment of compulsory military training was passed in July, 1940, but training remains on a voluntary militia basis. As of Jan. 1, 1941, the active army totaled 8,093 men, the air force 420, and trained army reserves 26,300. There were about 5,000 men in the police force. The navy consisted of 1 old torpedo gunboat, 1 survey ship, 3 patrol vessels, and a few

minor craft.

By the law of Dec. 29, 1941, Congress authorized the Government to contract a \$7,800,000 loan from the U.S. Export-Import Bank for the purchase of military, naval, and aeronautical equipment. Under a lend-lease agreement signed Jan. 13, 1942, the U.S. Government agreed to provide Uruguay with additional defense equipment to the reported value of \$17,000,000. With these funds and the proceeds of an internal defense loan, Uruguay expanded and modernized the equipment of its naval, air, and ground forces. An arsenal and several large defense bases were constructed, with the understanding that they would be opened to forces of the United States and other American powers if necessary to defend the continent against aggression from overseas.

Education and Religion. Although primary education is both compulsory and free, nearly 35 per cent of the adult population remains illiterate. There were 1,655 public schools with 193,423 enrolled pupils in 1941. Enrollment in secondary schools was 16,467; in evening courses for adults, 6,465; in the University of the Republic at Montevideo, about 20,000. The majority of the people profess the Roman Catholic faith, but there is complete religious freedom and no state church.

Production. Processing and manufacturing industries normally account for about 59 per cent of the total value of national production, pastoral industries for 24 per cent, and agriculture for about 12 per cent. The estimated value of industrial production in 1941 was 412,000,000 pesos. Value of output of the six leading industries was estimated as follows (in millions of pesos): Foodstuffs, including packing plants, 169.1; beverages, 35.5; textiles and textile products, 35.0; clothing industry, 17.8; metals and manufactures, 16.9; leather and manufactures, 13.7; all other industries (including electric power, gas, water, etc.), 124.0. The packing plants in 1942 purchased 979,511

cattle valued at 51,249,000 pesos, 1,001,910 sheep and lambs valued at 31,292,000 pesos, and 57,198 hogs valued at 2,138,000 pesos. The wool clip was 52,880 metric tons (110,000 bales) in 1941– 42 and about 58,915 metric tons in 1942–43. Estimated yields of the chief crops in 1942–43 were (metric tons): Wheat, 339,321; oats, 30,829; barley, 14,791; linseed, 49,000; corn, 50,000; rice, 14,719. Vineyards in 1942 produced 105,552 metric tons of grapes and 18,202,002 U.S. gal. of wine.

Foreign Trade. The "official value" of merchandise imports in 1942 was 47,040,000 pesos (58,431,473 in 1941); "actual values" of exports, 94,440,000 pesos (115,806,163 in 1941). The "actual" or market value was estimated to be about 10 per cent higher than the "official value," the arbitrary price scale upon the basis of which import duties were levied. The United States supplied 25.6 per cent of University 1941 imports. Great Britain 14 6 cent of Uruguay's 1941 imports, Great Britain 14.6, Argentina 13.9, and Brazil 12.6 per cent. Of the 1941 exports, 49.7 per cent by value went to the United States and 26.6 per cent to Britain. Wool, meats and extracts, hides and skins, flaxseed, and live animals were the chief exports.

Finance. By the decree law of Feb. 13, 1943, the general budget for 1942 was extended until June 30, 1943. As modified up to the end of 1942, the budget called for receipts of 112,912,000 pesos and expenditures of 112,649,000 pesos. The fiscal year 1942 started with an accumulated current deficit of 32,100,000 pesos, and with budget estimates as follows: Receipts, 92,187,683 pesos; expenditures, 110,778,333 pesos. Public debt on Mar. 31, 1943: Internal, 358,000,000 pesos; external, 138,-000,000 pesos. Average exchange rates of the Uruguayan peso: Official rate, \$0.6583 in 1941 and 1942; free rate, \$0.4838 in 1941 and \$0.5272 in

Transportation. Uruguay in 1942 had about 1,527 miles of railway line open to traffic, 2,611 miles of roads, and air lines linking Montevideo with the other chief cities of Uruguay and of North and South America. Under construction in 1943 were the Treinta y Tres-Melo section of the Pan American Highway and an improved road from Velazquez to Rocha, connecting the Pan American Highway and coastal roads. During 1939, 1,026 ocean-going vessels and 943 river steamers entered Uruguayan ports. The Uruguayan merchant marine on July 1, 1939, consisted of 247 vessels with a gross tonnage of 35,952.

Government. The Constitution of May 18, 1934,

was amended as a result of the national plebiscite held Nov. 29, 1942 (see 1943 Year Book, p. 733). It vests executive power in a President aided by a Council of Ministers, and legislative power in a Senate of 30 members and a Chamber of Deputies of 99 members, all elected by popular male and female suffrage for four years. Under the 1942 amendments, seats in the Senate are determined by proportional representation and the President has a free hand in selecting his Cabinet. Dr. Juan José Amézaga and Alberto Guani of the Colorado party were elected President and Vice-President respectively on Nov. 29, 1942, and installed on Mar. 1, 1943. As a result of the general election of Nov. 29, 1942, the standing of the parties in the Senate was: Colorados, 18; Herrera wing of the Nationalists (Blancos), 7; Independent Nationalists (Blancos), 3; Catholics, 1. In the Chamber of Deputies, the standing was: Colorados, 61; Herrera wing of Nationalists 22; Independent 61; Herrera wing of Nationalists, 22; Independent Nationalists, 10; Catholics, 3; Communists, 2; Socialists, 1. See below for developments in 1943.

#### HISTORY

Constitutionalism Restored. The constitutional dilemma and political crisis that led President Alfredo Baldomir to dissolve Congress and assume all governing powers on Feb. 21, 1942 (see 1943 YEAR BOOK), was peacefully terminated early in 1943. The Council of State, created by Baldomir on Mar. 8, 1942, to revise the constitution and to advise him on other governmental matters, was dissolved Feb. 12, 1943. On February 15 the new bicameral Congress, elected on Nov. 29, 1942, held its first session. The inauguration of President of President States of the Congress of the C dent-elect Juan José Amézaga and Vice Presidentelect Alberto Guani took place as scheduled on March 1, with ceremonies attended by representatives of all the countries in diplomatic relations with Uruguay. United States and Argentine naval detachments participated in the inaugural military review.

Members of President Amézaga's Cabinet, announced the same day, were: Minister of Foreign Affairs, José Serrato; Interior, Héctor A. Gerona; National Defense, Gen. Alfredo R. Campos; Finance, Ricardo Cosio; Labor, Tomás Barreta; Industry and Commerce, Javier Mendivil; Public Health, Luis Mattiauda; Agriculture, Arturo Con-zález; Chief of Police, Juan Carlos Gómez Folle. In his first speech as Foreign Minister on March 2, Serrato pledged himself to follow the pro-demo-cratic and pro-United Nations policies of President Baldomir and the latter's Foreign Minister, Dr. Guani. Serrato had been active as chairman of the Pro-Ally Committee in defeating the policies of the nationalist and pro-Axis elements led by Senator Luis Alberto de Herrera. Thus Baldomir achieved the objective of his 1942 coup-the establishment of a constitutional regime able to function in accordance with the strongly pro-democratic sympathies of the large majority of the Uruguayan people.

Aid from United States. The foregoing political transition assured the continuance and extension of Uruguay's close political, military, and economic collaboration with the United States. Adm. Jonas H. Ingram, commander of U.S. naval forces in the South Atlantic, and the U.S. Ambassadors to Montevideo and Buenos Aires conferred with Uru-guayan governmental leaders on defense problems at the time President Amézaga was inaugurated. At the conclusion of these discussions, Admiral Ingram announced that Uruguayan military bases would be placed at the disposal of U.S. naval forces in the event of an Axis attack upon South America. This was the understanding under which Washington had advanced extensive lend-lease and other financial aid to Uruguay in 1942 (see

1943 YEAR BOOK).
On March 7 the Uruguayan Government announced that it had rented to the United States the former German tanker Tacoma, which was interned in Montevideo harbor after serving as the supply ship for the ill-fated German pocket battleship Graf Spee. Another anti-Axis step followed on May 12, when Uruguay broke off diplomatic relations with the Vichy Government in France. Officials of the French Legation in Montevideo, who repudiated Vichy at about the same time, were permitted to continue to represent French interests. Under Dr. Guani's leadership, the inter-American Emergency Advisory Committee for Political Defense of the Continent continued from Montevideo its vigorous campaign against Axis spies and propagandists (see Pan Americanism). Further important financial and economic aid

was forthcoming from Washington in return for

Uruguayan collaboration. Vice President-elect Guani arrived in the United States toward the end of January in search of a large loan to tide his country over an acute economic crisis. He was warmly received because of the valuable support he had given Washington's "good neighbor" policy and the cause of inter-American solidarity. On February 4 he signed an agreement under which the Export-Import Bank agreed to advance Uruguay an additional credit of \$20,000,000 to finance a program of public works and agricultural projects. This loan was approved by the Uruguayan Cabinet on April 27 after some changes in provisions of the contract to which members of the Government had objected.

Washington also gave Uruguay priorities for the export and transportation of generators and other machinery for the Rio Negro hydroelectric project. The Export-Import Bank advanced a \$12,000,-000 credit for the purchase of this machinery in 1942.) American technicians were also made available to supervise the installation of this equipment. Meanwhile Uruguay continued to receive military equipment and supplies from the United States under the lend-lease agreement of 1942. The acute scarcity of fuel and other imported commodities was relieved to a substantial degree in July through the allocation of shipping space and sup-plies by Anglo-American agencies. On October 23 it was announced in Montevideo that the Uru-guayan Government had accepted a gift of \$500,-000 from the Office of the Coordinator of Inter-American Affairs in Washington for a program of sanitation and public health.

Economic Conditions and Measures. The \$20,000,-000 loan obtained from the Export-Import Bank in January was intended to counteract an acute economic depression. The depression developed as a result of the wartime scarcity of shipping which had deprived the republic of essential imports of coal, oil, iron and steel, newsprint, drugs, chemicals, sugar, and many other items. Despite Government efforts at rationing and price control, there was an alarming increase in the cost of living accompanied by a general deterioration in living standards except in certain favored industries.

This difficult situation was aggravated by a severe drought that developed in September, 1942, and continued with but little relief until the following March. As a result of the drought, cattle growers lost an average of 15 per cent of their herds. In some parts of the republic losses were 60 per cent. The 1942-43 harvest was from one-fourth to one-third below normal. The financial loss on cattle alone due to the drought was esti-

mated at 40,000,000 pesos.

Abundant rainfall and a mild winter, Government credits for irrigation and erosion-control projects, aid to agricultural labor, and the arrival of much-needed fuel and other imports all served to produce a gradual improvement of economic conditions during the latter half of the year. An important new meat contract was concluded with the British Government in November. It provided for the delivery to Britain during 1944 of 25,000 tons of frozen beef, 20,000 tons of corned beef, 1,400 tons of dehydrated beef, and 18,000 tons of army

rations.

Economic stringency provoked growing demand for a reduction of Government expenditures and the balancing of the budget. Accordingly the Government established a National Economic Council to study economic and financial problems and propose solutions. Meanwhile the Government continued with its long-term program of social and economic reform. It was announced early in 1943 that more than 1,000 one- and two-family low-rent modern dwellings had been completed in the suburbs of Montevideo. Plans were under way for the construction of low-rent apartment houses of the same type near the center of the capital. The republic's comprehensive social security program was extended to include all types of agricultural workers with the issuance of a new decree-law on January 20.

Officers. The Governor is Herbert B. Maw (Dem.), inaugurated in January, 1941, for a four-year term; Secretary of State, E. E. Monson, Attorney General, Grover A. Giles, See AQUEDUCTS; COP-PER; LEAD; SILVER.

UTILITIES. See ELECTRICAL LIGHT AND POWER. UZBEK SOVIET SOCIALIST REPUBLIC. See UNION OF Soviet Socialist Republics under Area and Population.

VANADIUM. A sharp drop in the production of high speed tool steel, for which vanadium finds its principal use, enabled United States production to outstrip greatly requirements in 1943 and permitted the building of a substantial stockpile. In November, 1942, melting of high speed tool steel totaled 11,857 tons. By August, 1943, this had dropped to 5,815 tons. Thus, between November, 1942, and September, 1943, allocations of vanadium by the War Production Board dropped 40 per cent. Vanadium was removed from allocation Jan. 1, 1944.

During the 12 months through October, 1943, vanadium allocations totaled 3,366,000 lb.; consumption, 3,550,000 lb. During the first six months of 1943, consumption was at a monthly rate of 296,000 lb.; during July and August, the monthly rate dropped 12 per cent to 258,500 lb. At the end of October, 1943, War Production Board estimated 1943 production would be 5,700,000 lb.

of contained vanadium.

The drop in vanadium consumption is expected to continue into 1944, it being estimated that 948,000 lb. will be required for the first quarter and 941,000 lb. for the second quarter. On Oct. 8, 1943, the War Production Board ferro-alloys branch wrote the armed services that it anticipated an excess of 2,500,000 lb. of vanadium in 1944, requesting the services to indicate what quantities should be reserved for their consumption and pointing out that if current requirements could not absorb production, curtailment would have to be considered.

By Oct. 15, 1943, Metals Reserve Co., Federal ore-buying agency, had received deliveries of 2,562,776 lb. of ferro-vanadium toward the 3-million-lb. stockpile which the War Production Board had asked it to assemble, and there were indications that the undelivered balance represented merely a matter of transfer from producers' stocks. The War Production Board ferro-alloys branch regards two million lb. of contained vanadium in products (ferro-vanadium or vanadium pentoxide) as a minimum stock which should be maintained above ground at all times for the sake of national security. On the basis of new consumption figures, this stock approximates a six months' supply. The desired figure was reached as early as August 31.

As in previous years, Peru and the United States principally mines in Colorado and Utah) were

the leading producers.
On Nov. 3, 1943, the Office of Price Administration translated the ceiling price of ferro-vanadium, formerly under the General Maximum Price Regulation, into a specific dollars and cents ceiling. Ceilings set were: ferro-vanadium, open hearth \$2.70; crucible \$2.80; primes \$2.90, per lb. of contained vanadium. See CHEMISTRY; GEOLOG-ICAL SURVEY.

### VARLIK LAW. See TURKEY under History.

VATICAN CITY. A sovereign state, officially known as the State of Vatican City, established within the city of Rome as the seat of the Papacy on June 10, 1929, in accordance with the Italo-Vatican (Lateran) Treaty of Feb. 11, 1929 (see 1929 Year Book, p. 417). Sovereign in 1943, Pope Pius XII (Eugenio Pacelli), who succeeded Pius XI Mar. 2,

The area of Vatican City is 108.7 acres, including St. Peter's Square, and in addition 13 ecclesiastical buildings outside of its limits enjoy extraterritorial rights. It has its own coinage, import duties, railway station, and its postal, telegraph, and radio facilities. The estimated population in 1941 was 970. Under the Constitution of June 7, 1929, the Pope exercises full legal, judicial, and executive powers. He delegates administrative authority within Vatican City to a governor (Enrico Galeazzi), who is assisted by a counselor general and other officials. The legal system is based on canon law and ecclesiastical rules. The chief adcanon law and ecclesiastical rules. The chief advisers of the Pope are the members of the College of Cardinals, who are appointed by him for life and elect his successor upon his death. From Vatican City the 11 committees forming the Curia Romana carry on the central administration of the Roman Catholic Church. Relations between the Church and the governments of the world are conducted by the Papal Secretary of State (Luigi Cardinal Maglione was appointed to this office Mar. 11, 1939). The Holy See in 1943 maintained diplomatic relations with 35 governments and had unofficial relations by means of Apostolic Delegates with a number of other countries, including the United States. See Union of Soviet Socialist Republics under History. Also see references under ROMAN CATHOLIC CHURCH.

VEGA B-34 AND PV-1. See AERONAUTICS under Types.

VENEREAL DISEASE. See FEDERAL SECURITY AGENCY; JUVENILE DELINQUENCY; PHILANTHROPY under Reynolds Foundation; Public Health Service; STATE LEGISLATION under Social Legislation.

VENEZUELA. A republic of South America, consisting of a Federal District, 20 States, and two Territories.

Capital, Caracas.

Area and Population. Area, 352,170 square miles; population, 3,943,239 (including 103,492 Indians) at the 1941 census and 3,996,096 (estimated) in 1942. The people are mainly of mixed Spanish and Indian blood, with a strong infusion of Negro blood along the coastal lowlands. Foreigners (1942) numbered 33,711. Population of the Fedcral District, including Caracas, 377,434 in 1941. Populations of the capital city and five largest State capitals in 1936 were: Caracas, 203,342; Maracaibo (State of Zulia), 110,010; Barquisimeto (Lara), 50,774; Valencia (Carabobo), 49,963; Maracay (Aragua), 29,255; and San Cristobal (Tachira), 22,058. Registered living births in 1941. numbered 134,384; deaths, 62,382; marriages, 15,-

Defense. As of Jan. 1, 1941, Venezuela had an active army of 11,373 men, including 373 in the air force, and 7,500 trained reserves. The navy comprised five gunboats and patrol vessels and various auxiliary craft. A U.S. naval mission was engaged in 1941 for four years. Under a lend-lease agreement signed Mar. 18, 1942, the U.S. Government agreed to supply arms and other equipment for modernization of Venezuela's defenses. In April American troops arrived to assist in training Venezuela's tender of the control of the zuelan forces (see 1943 Year Book, p. 736).

Education and Religion. Over 50 per cent of the adult population is illiterate. In December, 1941, there were 260,420 pupils in 4,970 public primary schools, and 4,499 pupils in 83 secondary and special schools (public and private). There are two universities (at Mérida and Caracas) and a School of Geology at Maracaibo (see History). Roman Catholicism is the predominant religion.

Production. Agriculture, stock raising, petroleum mining, manufacturing, pearl fishing, and forestry are the principal occupations. Coffee production was 650,000 bags (of 132 lb.) in 1942–43; cacao, 12,200 metric tons in 1941; sugar, about 37,500 short tons in 1941–42; tobacco, about 3,800,000 lb. annually; cotton, about 3,000 metric tons in 1941–42. Corn and other vegetables and fruits are widely grown. There are estimated to be 3,000,000

Cattle and 2,000,000 sheep and goats.

Petroleum production in 1941 reached the record level of 225,000,000 bbl. or 33,353,770 metric tons, giving Venezuela second place among oil-producing countries. Output of other minerals was: Diamonds, 29,417 carats in 1941; gold, 4,565 kilo-grams in 1940 (bullion to the value of 15,995,485 bolivares exported in 1941); coal, about 5,000 metric tons annually. Iron ore, copper, magnesite, salt, mercury, and asbestos also are mined. Manufacturing is confined largely to textiles, wood and leather products, cement, glass, tires, and canned meats. A modern meat canning factory was opened at San Fernando de Apure in 1943.

Foreign Trade. Imports in 1941 totaled 287,785,-292 bolivares and exports 1,061,564,661 bolivares. Petroleum and its products accounted for 1,000,-558,886 bolivares of the exports; coffee, 23,940,-449; gold bullion, 15,995,485; cacao, 6,055,531; cattle and hides, 2,056,001. Of the total exports, Aruba and Curação took 393,511,720 and 355,-

003,943 bolivares respectively (mostly oil for refining); United States, 226,590,639; Canada, 22,-080,015; Argentina, 15,889,111; Brazil, 10,544,-494; Great Britain, 9,363,169. The chief sources of imports were (in bolivares): United States, 226,837,622; Great Britain, 17,179,743; Brazil, 9,663,227; Canada, 4,600,203; Argentina, 4,558,-760; Sweden, 2,503,265; Ecuador, 2,318,772.

General imports in 1942 were valued at 215,-

General imports in 1942 were valued at 215,-760,000 bolivars, including bullion and specie. Export statistics were withheld for military reasons.

port statistics were withheld for military reasons. Finance. For the fiscal year ended June 30, 1942, actual budget revenues were 325,287,387 bolivares and expenditures 320,121,932 bolivares (about 296,000,000 and 320,000,000, respectively, for 1942–43). For 1943–44, nonloan revenues were estimated at 316,693,000 and expenditures at 348,500,700 bolivares. The debt of the National Government on Dec. 31, 1942, was 15,495,000 bolivares, excluding \$4,265,000 lent to semigovernmental agencies by the U.S. Export-Import Bank. The free market exchange rate of the bolivar averaged \$0.2660 during July-December, 1941, and \$0.2899 in 1942.

Transportation. Including the newly completed El Palito-Palmasola Railroad, Venezuela in 1943 had about 640 miles of railway line. Highways extended over 5,882 miles. The Director of Roads reported on Apr. 19, 1943, that a 780-mile stretch of the Venezuelan section of the Pan American Highway was open to traffic, there being 180 miles paved with concrete and 600 miles hardened with other materials. The chief cities are connected by a government-owned airline. The Royal Dutch Airways links the coastal cities with Aruba and Curaçao, while Pan American Airways provides connections with the hemisphere air network. In 1941, 59.26 per cent of all exports by value passed through Maracaibo; Las Piedras, 11.40; Puerto La Cruz, 11.34; Carapito, 9.88 per cent. Of the imports, 52.74 per cent by value passed through La Guaira; Maracaibo, 19.11; Puerto Cabello, 10.03; Puerto La Cruz, 9.21 per cent.

Government. The Constitution of July 11, 1936, vests executive powers in a President elected by Congress for five years and ineligible for reelection. There is a Senate of 40 members chosen by the State legislatures and a Chamber of Deputies of 87 members elected by municipal councils. The State legislatures and municipal councils are elected by direct ballot of literate males 21 or more years of age. The Constitution prohibits communism and anarchism. President in 1943, Gen. Isaías Medina Angarita, who assumed office May 5, 1941. Venezuela severed diplomatic relations with Germany, Italy, and Japan on Dec. 31, 1941. For 1943 developments, see below.

#### HISTORY

Internal Politics. Elections to the Senate and Chamber of Deputies, held by the State Legislatures and Municipal Councils respectively on Jan. 19, 1943, returned pro-Government candidates to nearly every seat at stake. There were no specific issues beyond general support of the policies of the Medina Government. The President's backers won an important victory over a reactionary organization in the State of Lara. Senator Alberto Ravell, who made a sensational exposé of fifth-column activities in 1942, was defeated for reelection in the State of Yaracuy. A considerable number of the new members of Congress, which convened April 19, were political prisoners or exiles during the long dictatorship of President Juan Vicente Gómez. Among them was Senator Jovito

Villalba, who spent seven years in Gómez dun-

geons.

Included among the new Congressmen were several outspoken opponents of President Medina's Government, elected by the opposition Acción Democrática party. With the 1945 Presidential election in the offing, the Government was also facing the possibility of opposition from wealthy and influential conservative elements. These considerations were believed to have inspired President Medina's decision to establish an official government party with mass support. On April 15 he sent a telegram to officials of the Federal District, States, and Territories calling for the formation of a political party that would "clearly and legitimately further the formation of groups that would fight for candidates who agreed to defend, with conviction, the political principles of the present Government."

Political activity had been banned altogether under the 27-year Gómez dictatorship and no well-defined political parties had evolved during the administration of Gómez's successor, President Eleazar López Contreras. President Medina's move was attacked by some critics as an attempt to establish a one-party dictatorship and praised by others as a positive step in the direction of representative government. In his message to Congress on April 27, Medina said that his aim was to reconcile the diverse social and ideological groups within the country and to execute the will of the majority. His liberal attitude was reflected in the composition of a new Cabinet formed on May 4, following a crisis provoked by press criticism of Minister of Development Eugenio Mendoza Jr. Three of the five new Ministers appointed were liberals.

The President further outlined his political objectives in addressing the organizers of the Government party on May 26. The Government, he said, was determined to prevent any return of dictatorship in Venezuela. Expressing his belief in the desirability of alternating executives, he indicated that he would not be a candidate for reelection in 1945. The tentative platform of the new party, officially known as Partidarios de la Politica del Gobierno, called for direct Presidential elections, encouragement of immigration and other measures to develop the nation industrially and agriculturally, extension of education and public health activities, modernization of the armed forces, and closer economic and cultural relations with democratic nations, especially those American republics favoring continental solidarity.

Another reshuffling of the Cabinet took place on November 18 after the Ministers of Interior and Labor had been forced to resign by criticism from labor organizations and the Leftist press, provoked by the handling of a bus-drivers' strike. New Ministers were named to the Interior, War, Treasury, Labor, and Agriculture portfolios. Meanwhile the President continued to administer national affairs with the aid of the emergency powers conferred

upon him June 13, 1942.

Oil Concessions Revised. A measure which greatly increased the President's popularity among the masses was the successful conclusion of the negotiations for a revision of the foreign oil concessions that were opened in 1942 (see 1943 Year Book, p. 737). Draft legislation incorporating the Government's proposals was submitted to representatives of the oil companies on February 6. Negotiations were continued and reciprocal concessions made until both the Government and the companies professed themselves satisfied. The revised oil

legislation was then passed by a special session of Congress and signed by the President on March 13. The cordiality with which these negotiations were conducted was emphasized at a subsequent state dinner which the Government tendered to representatives of the oil companies to thank them for their cooperation in the formulation and pas-

sage of the legislation.

The new law placed all oil companies and concessions in a fixed and equal position with relation to the state. It increased royalty payments to the Government to 16% per cent of the value of production from an average of 11 per cent. Surface rentals paid by oil concessionaires also were raised from the previous minimum of 2 bolivares per acre to 5 bolivares annually. Maximum rentals of 30 bolivares per acre were to apply only to those companies failing to develop their holdings. The tariff exemption previously granted the oil com-panies on imports of machinery and supplies was terminated, with the Government receiving discretionary powers to suspend duties on equipment imported for the construction of new oil plants.

Moreover, the companies agreed to expand the capacity of refining plants in Venezuela after the war to 202,000 barrels daily, or about two and one-half times the existing capacity. The companies also agreed to pay 25,000,000 bolivares in back taxes that had been in dispute. President Medina estimated that the royalties received during 1943 alone under the new oil law would total about 50,000,000 bolivares more than if the old agreements had remained in effect. The Government's oil revenues in 1942 amounted to 63,561,-411 bolivares. The companies agreed to these important changes because their concessions-some of which were about to expire—were automatically extended for another period of 40 years. For a detailed study of the new law, see Foreign Com-

merce Weekly, July 10, 1943, p. 5.

Economic Development. Increased oil revenues assisted the Government substantially in financing its program of industrial and agricultural development as well as the four-year plan for the development of the interior adopted in 1942 (see 1943 Year Book). Another source of additional revenue was the income tax—the first in Venezuela's historyadopted in 1942 and placed in effect Jan. 1, 1943. The estate of President Gómez, confiscated by the Government upon the dictator's death in 1935, yielded a profit of \$527,436 in the fiscal year 1941-42, according to an announcement made in May, 1943. U.S. Government loans and financial grants provided still another source of funds for

the Venezuelan development program.

The extensive program of public works announced for the fiscal year 1948-44 included four airfields, a shipyard on the Orinoco, new ware-houses at La Guaira and Puerto Cabello, port works in Cumaná and La Guaira, and new schools, hospitals, sanitation and defense works, etc. Approximately \$3,300,000 was appropriated for a 1,000-bed hospital and a school for doctors, nurses, and laboratory technicians to form part of the new plant of the Central University at Caracas. Plans called for the building of a completely new and American-style university city on a hacienda in the outskirts of the capital.

The development program was slowed during 1943 to some extent by inability to import the necessary equipment and materials. However President Medina reported in his annual message to Congress that there had been an expansion of both industry and agriculture, partly as a result of Government assistance. Moreover the accumulation of large gold and foreign exchange reserves made possible the postwar acquisition of the machinery and other equipment needed to continue the de-

velopment program.

United States Cooperation. President Medina on April 27 said that difficulties in the foreign exchange situation had impeded the prompt use of the \$12,000,000 credit advanced by the Export-Import Bank of Washington to the Agricultural and Cattle Bank of Venezuela in December, 1942, for increasing agricultural and fisheries production. Of the \$12,000,000 credit, half was allocated to finance the coffee and cocoa crops of 1943 and 1944, while the other half was to be used to fi-nance the long-range agricultural expansion program. In addition to this \$12,000,000 credit, the Venezuelan Government or its agencies had received during 1942 a \$20,000,000 public works credit, and a \$6,700,000 credit for a housing projection. ect in Caracas, also from the Export-Import Bank of Washington, as well as a promise of lend-lease arms and supplies (see 1943 Year Book).

There was a further extension of financial and

technical aid from the United States during 1943. Intensification of the anti-malaria campaign in Venezuela and initiation of other public health projects were provided for in a health and sanitation agreement effected by an exchange of notes between the U.S. and Venezuelan Governments on February 18. An accord for the development of foodstuffs production in Venezuela was reached through another exchange of notes signed May 14. This one-year agreement bound the Venezuelan Government to establish a special office for the execution of a food plan to be formulated by the Ministry of Agriculture and Animal Husbandry in collaboration with a Food Production Mission to be sent to Venezuela by the Institute of Inter-American Affairs at Washington. U.S. financial contributions were understood to have been agreed upon under both these agreements.

A technical commission from the United States was at work in 1943 studying the inland waterway system, and particularly the Orinoco River network, with a view to the development of water transportation. The U.S. military mission sent to Venezuela in March, 1942, to train Venezuelan artillery units in the use of American guns left the country in March, 1943. The action of Anglo-American oil companies in refusing to furnish fuel oil for the German-owned railway linking Caracas and Valencia forced it to suspend service. The Venezuelan Government then moved to ex-

propriate the line on November 13.

Other Foreign Relations. In furtherance of his policy of close cooperation with neighboring countries, President Medina in August made a tour of the capitals of Colombia, Panama, Ecuador, and Peru, where he was cordially received. It was announced in October that he would visit the United States in the near future.

VERMONT. A new England State. Area: 9,609 sq. mi. Population: 859,231 (1940 census); 322,-061 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to

each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. AGRICULTURE; MINERAL PRODUCTION; ROADS AND STREETS; Schools; Social Security Board; Taxation; Universities; and Vital Statistics. The census of manufactures has been suspended for the time being; for the latest information, see 1941 YEAR Воок, р. 430.

Elections. See the article ELECTIONS IN THE United States; also, for incumbents, House of Representatives and Senate.

Legislation. See the separate article on STATE LEGISLATION.

Officers. The Governor is William H. Wills (Rep.), inaugurated in January, 1943, for his second two-year term; Lieutenant Governor, Mortimer R. Proctor; Secretary of State, Rawson C. Myrick; Attorney General, Alban J. Parker.

VETERANS. See AMERICAN LEGION; the article which follows; also, Civil Service Commission and Armed Forces under Demobilization. For Veterans' Rehabilitation Funds, see STATE LEGISLA-TION under War and Postwar.

VETERANS' ADMINISTRATION. On June 30, 1943, there were in force 586,590 U.S. Government life insurance policies representing \$2,499,603,842 of insurance. Disbursements for this type of insurance during the fiscal year 1943 totaled \$39,814,-670. Monthly payments on yearly renewable term insurance policies were being made to 9,717 permanently and totally disabled veterans and the beneficiaries of 4,683 deceased veterans. Monthly payments on automatic insurance policies were being made to 224 disabled veterans and the beneficiaries of 19 deceased veterans. Disbursements for term and automatic insurance during the fiscal year 1948 were \$14,489,489. During the fiscal year 1943, there were approved 8,083,330 applications for National Service Life insurance aggregating \$59,696,515,000 of insurance. Disbursements during the fiscal year 1943 for this type of insurance totaled \$6,549,351. Through June 30, 1943, there had been received 67,054 applications for insurance benefits under the Civil Relief Act of Oct. 17, 1940. Of this number 53,080 applications representing \$127,575,186 of insurance had been approved.

On June 30, 1943, the total hospital load of the Veterans' Administration was 56,897 patients, of whom 56,641 were United States veterans. Of the United States veterans, 54,013 were in Veterans' Administration facilities, 1,680 in other Government hospitals, and 948 in State or civil institutions. On the same date, the veteran population in domiciliary status in Veterans' Administration facilities totaled 8,997. In addition to the hospital and domiciliary load, an average of 4,898 veterans was cared for in State or Territorial homes during

the fiscal year 1943.

Payments for pension, compensation, or retirement pay were, on June 30, 1943, being paid to 621,581 living veterans and to the dependents of 238,508 deceased veterans. The net disbursements during the fiscal year 1943 for this purpose totaled

\$442,373,819.

The net disbursements made by the Veterans' Administration during the fiscal year 1943 from all appropriations and trust funds totaled \$643,-406,394. This amount includes adjustments on lapsed appropriations but does not include dis-bursements from trust funds for investment purposes. See American Legion; Selective Service SYSTEM.

Officers. The Governor is Colgate W. Darden, Jr. (Dem.) inaugurated in January, 1942, for a four-year term; Lieutenant Governor, William M. Tuck; Secretary of State, Ralph E. Wilkins; Attorney General, Abram P. Staples.

VIRGIN ISLANDS. An insular possession of the United States, situated about 70 miles east of San Juan, Puerto Rico. This possession forms part of the chain of the Lesser Antilles which extends from Puerto Rico to the coast of South America. When needful for distinction, and commonly abroad, the U.S. territory is known as the Virgin Islands of the United States. Of the 50 islands in the group only onited States. Of the 50 islands in the group only the three largest are inhabited—St. Thomas, St. John, and St. Croix. Total area, 132 square miles; population, 24,889 in 1940; 22,012 in 1930. Areas and populations (1940) of the individual islands; St. Thomas, 28 square miles, 11,265 inhabitants; St. John, 20 square miles, 722 inhabitants; St. Croix, 84 square miles, 12,902 inhabitants. Of the whole population, 69 per cent in 1940 were New New York 1940 were New Y whole population, 69 per cent in 1940 were Negroes, 22 per cent of mixed race, 9 per cent whites; 1939's birth rate 35.8, death rate 20.9, per 1,000. Capital, Charlotte Amalie (pop. 9,801 in 1940) on the island of St. Thomas. Illiteracy is practically confined to the population over 21 years of age (16 per cent in 1930), and with few exceptions, everyone speaks English.

Defense. After 50 years of intermittent negotiations the United States acquired the Danish West Indies through a treaty with Denmark in 1917 for \$25,000,000. The islands are the most eastern outpost of the United States and when defenses are completed will furnish protection both to U.S. holdings in the Caribbean Sea and the Panama Canal. The fine harbor of Charlotte Amalie provides shelter for as many as 23 warships at one time. Construction of defenses in this region during the past few years have been primarily to bulwark the great naval, military, and air bases in Puerto Rico. In 1935 a permanent U.S. Marine Corps air base was built near Lindbergh Bay on the island of St. Thomas; in 1940 the construction of additional land and seaplane facilities there was authorized. A large submarine base was started in 1939 at Charlotte Amalie Harbor. A U.S. Army air base was constructed on St. Croix near Frederiksted. Work on military and naval installations

gave employment to every employable male throughout 1942, but in 1943, when most of the defense projects had been completed, unemployment again began to loom as an economic problem.

Production and Trade. The basic economies of the islands of St. Thomas and St. Croix have differed for more than 200 years. This difference has been increased by wartime activities. St. Thomas has largely depended upon commerce, trade, and shipping. Its resources have grown by defense activities from an estimated municipal revenue of \$249,-000 to nearly \$694,000. Thus, for the first time since the acquisition in 1917, the Municipality of St. Thomas and St. John has been able to finance itself without Federal deficit appropriations. On the other hand the Municipality of St. Croix has depended chiefly upon agriculture for its revenues. During the last five years there have been repeated droughts resulting in decreases in sugar production and cattle raising. Employment, another factor in maintaining sufficient revenues, was at its peak on the island of St. Thomas in 1942 where extensive military preparations were under way. But on St. Croix, where there was unemployment, partial relief was extended through activities of the Work Projects Administration and the National Youth Administration. This situation afforded only temporary relief since work relief as a Federal policy was abandoned by Congress in 1943. Unemployment again rose to plague the island.

For the fiscal year ended June 30, 1943, actual revenues of the municipality of St. Thomas and St. John were \$693,801 (\$599,117 in 1941-42) while total budget appropriations were \$609,254 in 1942-43 (\$588,000 in 1941-42). Revenues of the municipality of St. Croix were \$194,441 in 1942-43 (\$196,486 in 1941-42), budget appropriations \$353,800 (301,845), and the Federal deficit appropriation \$114,800 (\$105,000). The Federal appropriation for the Government of the Virgin Islands in 1942-43 totaled \$300,420, of which \$151,075 was for the central administration, \$37,650 for the agricultural experiment station, and \$114,800 for the deficit of the municipality of St. Croix. A supplemental deficiency appropriation of \$66,750 was pending before the U.S.

Congress on June 30, 1943.

Government. During the first 14 years of American control the Virgin Islands had a naval government. But in 1931 jurisdiction was transferred from the Navy Department to the Department of the Interior and a civil governor was appointed by the President. Congress passed an Organic Act for the islands in 1936 which effected little change in the structure of the government although it did allow for a greater measure of political freedom. The autonomy of the two municipalities was retained and both have Municipal Councils, which when called in joint session, constitute the Legislative Assembly. Under this system public education is a municipal function. There are two separate school systems—one for the Municipality of St. Thomas and St. John, and the other for the Municipality of St. Croix. Each has its own Superintendent of Education, appointed by the U.S. Secretary of the Interior; and each has its own board of education. Appropriations for education are included in the separate budgets. Both municipalities maintain schools on the elementary and secondary levels. Yet only about 5 per cent of the school population is enrolled in the senior high school. Private schools, denominational in character, enroll about 30 per cent of the children of school age. The Governor is appointed by the President and holds office at

his pleasure. Governor in 1943, Charles Harwood, who took office on Feb. 3, 1941.

History. Hearings were held during May, 1943, by Congress on a bill "to assist in relieving economic distress in Puerto Rico and the Virgin Islands by providing work for unemployment, and for other purposes." On June 5, 1943 a sub-committee of the House Committee on Insular Affairs visited the Virgin Islands to investigate economic conditions. But no action was taken in this matter during the calendar year of 1943. Governor Harwood reported late in the year that, through the efforts of the Department of the Interior and the Food Distribution Administration, the food shortages during the first half of the fiscal year were supplemented so that a sufficient supply was assured for the end of the year. The Selective Service Act was made applicable to the Virgin Islands in October, 1943. Shortly thereafter eligible males were called up for military duty in the U.S. armed forces. Details of the operations of Draft Boards in the Virgin Islands were withheld for military reasons.

CHARLES F. REID.

VISUAL AIDS. See EDUCATION; EDUCATION, U.S. OFFICE OF.

VITAL STATISTICS. According to tabulations made by the U.S. Bureau of Census, there were 2,808,996 births and 1,385,187 deaths registered in the Unit-ed States for the year 1942. These figures repre-sent an increase of 295,569, or 11.8 per cent, in the number of births, and a decrease of 12,455, or 0.9 per cent, in the number of deaths as compared with 1941. The increase in the number of births has produced a corresponding increase in the birth rate from 18.9 (1941) per 1,000 population to 21.0, highest recorded since 1925. Since 1933 birth rates have been increasing, being particularly marked in recent years, and according to provisional figures for the first 10 months of 1943, they have continued to climb. Every State in the Union except New Mexico reflected the upward trend in 1942 by showing an increase in the birth rate. The largest reported percentage increase was 25.9 per cent for Connecticut, and the lowest was 0.8 per cent for South Carolina. Highest birth rates are: Utah 27.4, New Mexico 26.7, Mississippi 25.4, North Carolina 25.2, and both Alabama and South Carolina 24.2. Lowest birth rates are: District of Columbia 17.5, Missouri 18.6, New York 18.9, Massachusetts, Nebraska, and New Hampshire 19.0, Rhode Island and New Jersey 19.1, and Florida 19.2.

The mobilization of manpower for war activities in 1941 and 1942 created potential health hazards unrivaled in the history of the United States. See Public Health Service. However, the death rate continued its downward course in 1941 and 1942, declining from 10.7 per 1,000 population in 1940 to 10.5 in 1941, and to 10.4 in 1942, the lowest ever recorded for the United States. The death rates ranged from 8.7 per 1,000 population in the West South Central States to 11.5 in the New England States.

The 10 leading causes of death in 1942 accounted for about 74 per cent of the deaths from all causes. The largest reduction was recorded for motor-vehicle accidents (declining 29.6 per cent compared with 1941), although substantial decreases were shown in pneumonia and influenza, 12.8 per cent. (See ACCIDENTS.)

The infant mortality rate for 1942 was 40.4 per 1,000 live births and was 10.8 per cent below the

rate of 45.3 in 1941. The rate by States ranged from 29.2 per 1,000 live births in Connecticut to 97.9 in New Mexico. In general, the highest rates were recorded for residents of the Southern and

the Mountain States. (See Children's Bureau.)
The accompanying tables show (1) deaths from selected causes in the United States in 1942, together with the death rate, and (2) a report on

TABLE 1—NUMBER OF DEATHS AND DEATH RATES (NUMBER PER 100,000 POPULATION) FOR SELECTED CAUSES: UNITED STATES, 1942

| Cause of death                          | Number    | Rate         | Cause of death                         | Number  | Rate  |
|---|-----------|--------------|--|---------|-------|
| All causes                              | 1,385,187 | 1,035.5      | Diseases of the heart                  | 394,915 | 295.2 |
| Typhoid and paratyphoid fever           | 750       | 0.6          | Chronic rheumatic diseases of the      |         |       |
| Cerebrospinal (meningococcus) menin-    |           |              | heart                                  | 25,296  | 18.9  |
| gitis                                   | 981       | 0.7          | Diseases of the coronary arteries and  |         | 040   |
| Scarlet fever                           | 447       | 0.3          | angina pectoris                        | 113,636 | 84.9  |
| Whooping cough                          | 2,536     | 1.9          | Diseases of the heart (other forms)    | 255,983 | 191.4 |
| Diphtheria                              | 1,273     | 1.0          | Pneumonia (all forms) and influenza    | 74,532  | 55.7  |
| Tuberculosis (total)                    | 57,690    | 43.1         | Bronchopneumonia                       | 30,636  | 22.9  |
| Tuberculosis of the respiratory system  | 52,980    | 39.6         | Lobar pneumonia                        | 27,469  | 20.5  |
| Tuberculosis (other forms)              | 4,710     | 3.5          | Pneumonia (unspecified)                | 5,525   | 4.1   |
| Dysentery                               | 1,877     | 1.4          | Influenza                              | 10,902  | 8.1   |
| Malaria                                 | 861       | 0.6          | Ulcer of stomach or duodenum           | 9,259   | 6.9   |
| Syphilis (all forms)                    | 16,345    | 12.2         | Diarrhea, enteritis, etc               | 11,774  | 8.8   |

vocational rehabilitation, office of. An agency of the U.S. Government established July 6, 1943, as a constituent organization within the Federal Security Agency to administer the expanded program of rehabilitation services authorized by the 1943 amendments to the Vocational Rehabilitation Act of 1920 which was under the administra-

tion of the Office of Education.

The Vocational Rehabilitation Amendments of 1943, approved by the President on July 6, 1943, provide the necessary frame work within which a peacetime as well as a wartime program of rehabilitation will be administered. The scope of services available to disabled persons now and after the war has been broadened to include any services necessary to render them capable of engaging in remunerative employment or to render them more advantageously employable. These include surgical and medical care, hospitalization, therapeutic treatment, artificial appliances, vocational guidance and training, maintenance during training, and placement in employment. In contrast, the Vocational Rehabilitation Act of 1920, under which authorization the rehabilitation program has operated during the last 23 years, limited the use of Federal funds to training and furnishing of prosthetic appliances.

Other changes made by the new Amendments concern the groups of disabled individuals to be served and the methods of financing this Federal-State program. Mentally as well as physically disabled individuals are now eligible for rehabilitation. Specific provision has been made for the rehabilitation of the blind and war disabled civilians, the latter of whom are defined to include members of the citizens defense corps, aircraft warning service, civil air patrol, and the merchant marine.

The fiscal provisions have been liberalized, with the old limitation of 3½ million dollars appropriated annually by the Federal Government for matching purposes having been removed. Grants to the States may now be based on actual requirements and the amount of State funds available for matching, rather than on the basis of population as

provided by the Act of 1920.

Under the Amendments of 1943, the Federal Government will assume the entire cost of administration of State programs in contrast to the previous requirements of matching on a 50-50 basis. It will assume one half of the cost of medical examinations, surgical and therapeutic treatment, hospitalization, prosthetic appliances, transportation, occupational tools and licenses, rehabilitation, training, and maintenance. The entire cost of these services will be assumed by the Federal Government in the case of war disabled civilians.

Sole responsibility for the administration, supervision, and control of this program rests with the State Boards of Vocational Education. Where there is a State Commission or other Agency authorized to provide rehabilitation services to the blind, that Commission or Agency will administer the part of the rehabilitation program pertaining to

this group.

Responsibility for certification of Federal funds and establishing standards rests with the Federal Security Agency. Within this Agency, an Office of Vocational Rehabilitation has been created to discharge these Federal responsibilities. The basic condition to the certification of Federal funds is a State plan of vocational rehabilitation approved as meeting Federal requirements under the Act.

WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS. These Divisions of the U.S. Department of Labor administer the Fair Labor Standards Act of 1938, commonly called the Federal Wage and Hour Law, and the Walsh-Healey Public Contracts Act. Thirteen directors head the regional offices and North Carolina has a special cooperative agreement with the Divisions to enforce the Acts. By the end of the first quarter of the 1943 fiscal year, the integration of the two Divisions had been completed and the plan of joint activities was in operation in the field, eliminating duplicate inspections.

During the fiscal year ended June 30, 1943, 61,-650 establishments were inspected under both Acts. Of these, 61,356 were inspected under the Fair Labor Standards Act with 56,994 found to be covered; of these covered establishments violations were found in nearly three-fourths and failure to pay the minimum wage or overtime in almost half. Nearly 8,000 inspections were made under the Public Contracts Act in the period following consolidation, all but 300 of which were concurrent with the Wage-Hour inspections. In about one-third of these violations were found and in almost one-fifth of them, violations of the minimum wage or overtime provisions. During the fiscal year, restitution of approximately \$16,800,000 in wages illegally withheld under both Acts had been agreed upon by employers or ordered paid to almost 390,000 employees in about 20,000 establishments.

The Wage and Hour and Public Contracts staff is charged further with the inspection of safety and health devices in those plants holding public con-

tracts

The Divisions had just been merged when they assumed the additional job of assisting the National War Labor Board (q.v.) in the wage stabilization program. The more than 100 field offices and 1,000 inspectors of the Divisions undertook the servicing of employers and employees in every section of the country, empowered to issue jurisdictional rulings as to whether or not proposed changes in pay schedules required the prior approval of the Board, ac-

cording to official releases and orders of the Board itself. By the end of June, 1943, the Divisions had acted on over 100,000 requests for rulings and handled about 900,000 informal inquiries relating to wage stabilization. In 65,000 applications the applicants were assisted in filling out the required forms for the War Labor Board which were then forwarded to the Board for action. Special inspections made by Wage and Hour and Public Contracts inspectors to determine whether or not employers had complied with the Executive Order of the President indicated that a large percentage of violations was unintentional, and education in requirements of the Order and the regulations of the War Labor Board has therefore become an integral part of the inspection program.

Throughout the year the Divisions gave assistance to various other war agencies, inspecting, for example, 28,000 establishments for the War Production Board under its Production Requirements

Plan.

Proceedings for injunctions against future violations of the wage or hours provisions of the Fair Labor Standards Act were instituted in 487 cases, while the criminal penalties which the statute provides for cases of wilful violations were invoked in 51 cases during the year. During its 1942–43 term the Supreme Court heard argument and rendered decisions in seven cases involving the Fair Labor Standards Act and denied certiorari in nine others.

Significant was the decision in the Walling v. Jacksonville Paper Co. and Higgins v. Carr Bros. Co. cases where the Supreme Court held that goods ordered pursuant to preexisting contracts or understandings between the wholesaler and his customers remain "in commerce" until they reach the customer, and that the employees of the wholesaler who are engaged in the ordering and receiving of extrastate goods, as well as those engaged in the local distribution of such goods brought in pursuant to prior contracts or understandings, are entitled to the benefits of the Act. In two other cases the Court upheld the Division's interpretations in applying the Act respectively to employees maintaining and collecting tolls on a toll road and a drawbridge which formed a part of a highway used in interstate commerce (Overstreet v. No. Shore Corp.), and to employees of an independent contractor who drilled oil wells owned by oil companies, the output of which the contractor knew was going to be shipped in interstate commerce (Warren-Bradshaw Drilling Co. v. Hall). In the case of McLeod v. Threlkeld a five to four majority of the Court held that the Act did not embrace a cook employed by a commissary company on a railroad camp car whose duties included the preparation and serving of meals to members of a railroad's maintenance crew.

Following the procedure required by Sections 5 and 8 of the Fair Labor Standards Act for establishing minimum wages in specific industries, sixteen industry committees were convened by the Administrator during the year, each of which recommended a 40-cent minimum for its industry or group of industries. By the close of the year the Administrator had issued wage orders establishing the recommended minima for seven of these industries and seven others from the previous year; action had not yet been taken on the recommendations of the remaining nine industry committees. A significant factor in effectuating the work of the industry committees was the inclusion of many related industries simultaneously under a single committee. Thus, Committee Number 53 for the metal, plastics, machinery, instrument, and allied indus-

tries covered products classified in over 150 Census industries.

The industries affected by committee recommendations during the year employ more than 10 million covered workers, of whom approximately 370,000 would be directly affected by the issuance of wage orders requiring the payment of a minimum wage of 40 cents an hour. It is estimated that in one-third of the industries, between one-fifth and one-half of the workers were earning less than the recommended minimum.

Under the terms of the Fair Labor Standards Act, the minimum of 40 cents will apply to all covered workers in October, 1945. By October, 1943, however, industry committees had met and recommended a 40-cent minimum wage for all the industries on the mainland of the United States subject to the Act. Thus, under the Congressional direction to proceed as rapidly as possible with industry committee action, it is anticipated that the universal 40-cent minimum for the 21,000,000 workers covered under the Fair Labor Standards Act will have been reached nearly two years in advance of the Oct. 24, 1945, deadline set in the statute.

war communications, Board of (BWC). The Board of War Communications (formerly the Defense Communications Board) was created by Executive Order on Sept. 24, 1940, to coordinate plans for the most efficient use of the country's radio, wire, and cable communications during the national emergency. After the United States entered the war, the President further empowered the BWC to use, control, or close down communications facilities and to set up preferences or priorities in the handling of essential war communications.

dling of essential war communications.

James Lawrence Fly, Chairman of the Federal Communications Commission, is also Chairman of the Board. Other members are Maj. Gen. Harry C. Ingles, Chief Signal Officer of the Army; Rear Adm. Joseph R. Redman, Director of Naval Communications; Hon. Adolf A. Berle, Jr., Assistant Secretary of State; and Hon. Herbert E. Gaston, Assistant Secretary of the Treasury, who is also BWC Secretary. Capt. E. M. Webster, Chief of Communications, U.S. Coast Guard, is Assistant Secretary of the BWC.

The Board has no paid personnel. appropria-

The Board has no paid personnel, appropriations, or funds. It operates through a Coordinating Committee, headed by FCC Chief Engineer E. K.

Jett, and a Law Committee staffed by personnel from the five agencies represented on the Board. In addition, a number of committees made up of industry, government, and labor representatives, specialists in all fields of communications, serve the

Board in an advisory capacity.

During the 1943 fiscal year, the BWC issued 18 orders designed to strengthen and speed essential wartime communications. Perhaps the most important were Orders 20, 26, and 27, establishing priority systems for telephone, teletypewriter, and telegraph messages important to the war effort. Faced with an unprecedented volume of telephone traffic, coupled with shortages of facilities and personnel, the BWC in Order 20, Oct. 8, 1942, set three categories of priorities for all telephone toll calls important to the war effort or public safety. Priority handling (Order 26) for urgent teletypewriter exchange (TWX) messages and for urgent telegrams (Order 27) essential to the prosecution of the war war in the control of the prosecution of the war war in the control of the war effort or public safety.

cution of the war was instituted in January, 1943. Effective July, 1942, the Board (Order 12) authorized the FCC to remove and impound all amateur and unlicensed radio equipment in Puerto Rico and the Virgin Islands. In Order 13 licensees of domestic broadcast stations were asked to report on their stocks of transmitting tubes. Authority to use, control, or close wire and radio facilities in Alaska and Puerto Rico was delegated to the War Department (Orders 14 and 24). And in the fall of 1942 the Board prohibited substantially all private radio telephone calls outside the Western Hemisphere unless approved by an agency of the U.S. Government.

In line with the policy of government control of international broadcasting facilities during the war, the Board ordered closure of short-wave radio stations WRUL, WRUS, and WRUW and authorized their use by the Office of War Informa-

tion.

To implement efficient handling of a greatly accelerated volume of telegraph traffic, the Board in December, 1942, set forth "speed of service" objectives and forbade acceptance by the telegraph carriers of congratulatory, greeting, and other types of nonessential telegrams. Carriers were also forbidden to use personnel or facilities in rendering errand or other nontelegraphic services to the public. A further report to the Board on the speed and adequacy of wartime telegraph service was made by the Federal Communications Commission (q.v.)

in August, 1943.

The need for flexible, efficient systems of radiotelegraph communications from this country to theaters of Allied military operations in North Africa and elsewhere has engaged considerable attention of the Board. BWC Order 29, adopted in May, 1943, made it necessary for American international wire or radio communications carriers to file written notice with the Board for its approval before opening negotiations with any foreign administration regarding the establishment of

communications circuits from this country.

WAR DEPARTMENT DECORATIONS. A list of decorations awarded by the U.S. War Department follows, in order of precedence, except that the Oak-Leaf Cluster is issued in lieu of an additional medal, and its precedence is that of the medal it represents:

Medal of Honor

2. Distinguished-Service Cross 3. Distinguished-Service Medal 4. Legion of Merit

- 5. Silver Star
- 6. Distinguished-Flying Cross
- 7. Soldier's Medal 8. Purple Heart

9. Air Medal

10. Medal for Merit (State, War, and Navy Departments)

11. Oak-Leaf Cluster

12. Good Conduct Medal and Clasps

Not more than one of the several decorations authorized by Federal law may be awarded for the

same act of heroism or achievement.

The recipient of a Medal of Honor will, whenever practicable, be ordered to Washington and the presentation made by the President. When this is impracticable, the Secretary of War or an officer designated by him will act as the personal representative of the President for the presentation of the medal.

Awards of decorations are made by the War Department or by designated commanders, acting for the President. In any case where the commander is not authorized to make an award, recommendations will be forwarded to the War Department.

The Medal of Honor is awarded in the name of the Congress to each person who, while an officer, noncommissioned officer, or private of the Army, in action involving actual conflict with an enemy, distinguishes himself conspicuously by gallantry and intrepidity at the risk of his life above and beyond the call of duty

The Distinguished-Service Cross is awarded to persons who, while serving in any capacity with the Army, distinguish themselves by extraordinary heroism in connection with military operations against an armed enemy, involving a risk of life so extraordinary as to set him apart from his comrades.

The Distinguished-Service Medal is awarded to persons who, while serving in any capacity with the Army, distinguished themselves by exceptionally meritorious service to the Government in a duty of great responsibility (one which has contributed in high degree to the success of a major command, installation, or project).

The Legion of Merit, without reference to de-gree, is awarded to members of the armed forces of the United States and of the Government of the Philippines who distinguish themselves by excep-

tionally meritorious conduct in the performance of outstanding services. It is particularly desired that recognition be given personnel in the enlisted and lower commissioned grades whose services meet the standards prescribed. The Legion of Merit, in four degrees, is awarded to personnel of the armed forces of friendly foreign nations who distinguish themselves by exceptionally meritorious conduct in the performance of outstanding services. The degrees are: Chief Commander, Commander, Officer,

and Legionnaire.

The Silver Star is awarded to persons who, while serving in any capacity with the Army, distinguish themselves by gallantry in action not warranting the award of a Medal of Honor or Distinguished-

Service Cross.

The Distinguished-Flying Cross is awarded to members of military, naval, and air forces who, while serving in any capacity with the Army Air Forces, distinguish themselves by heroism or extraordinary achievement while participating in aerial flight.

The Soldier's Medal is awarded to members of military, naval, or air forces, who, while serving in any capacity with the Army, distinguish themselves by heroism not involving actual conflict with an

enemy.

The Purple Heart, established by General George Washington at Newburgh, 7 August 1782, during the War of the Revolution and revived out of respect to his memory and military achievements by War Department General Orders, No. 3, 22 February 1932, is awarded to members of the armed forces of the United States and to civilians who are citizens of the United States serving with the Army, who are wounded in action against an enemy of the United States, or as a direct result of an act of such enemy, provided such wound necessitates treatment by a medical officer. One award (the Purple Heart for the first wound, an Oak-Leaf Cluster thereafter) is authorized for each such wound, except that only one award is authorized for two or more wounds received contemporane-

The Air Medal is awarded to persons who, while serving in any capacity in or with the Army, distinguish themselves by meritorious achievement while participating in an aerial flight. The required achievement to warrant award of the Air Medal is less than that for the Distinguished Flying Cross, but must be accomplished with distinction above

that normally expected.

None of the above decorations will be issued more than once to any one person, but for each succeeding deed, act, or achievement sufficient to justify an award, a bronze Oak-Leaf Cluster will be awarded in lieu thereof. Silver Oak-Leaf Clusters are authorized for wear on the appropriate decoration in lieu of bronze Oak-Leaf Clusters in the ratio of one to five.

In case an individual who distinguishes himself shall have died before the making of the award to which he may be entitled, the award may nevertheless be made and the decoration or other device presented to the first of the following representa-tives as shown by the records of the War Department: Widow (provided she has not remarried), eldest son, eldest daughter, father, mother, eldest brother, eldest sister, eldest grandchild.

The Medal for Merit is awarded to such civilians of the nations prosecuting the war under the joint declaration of the United Nations and of other friendly foreign nations as have, since the proclamation of an emergency by the President on 8 September 1939, distinguished themselves by exception-

ally meritorious conduct in the performance of outstanding services. The Medal of Honor, the Legion of Merit, the Distinguished-Flying Cross, and the Soldiers Medal will not be awarded to civilians. The Purple Heart may be awarded to accredited civilians (for example, war correspondents, Red Cross personnel, etc.) who are citizens of the United States, and to officers and members of crews of ships of the United States Merchant Marine serving within their commands. The Distinguished-Service Cross and the Silver Star may be awarded by the commanding generals of United States Army forces in theaters of operations, to officers and members of crews of ships of the United States Merchant Marine, serving under their jurisdiction. This authority will not be delegated.

WAR FOOD ADMINISTRATION (WFA). The function of the War Food Administration and its responsibility to the nation is to assist in achieving the largest supplies of those foods and fibers that are most needed to meet the war emergency; to bring about the most efficient processing of that food; and finally to enable the most equitable distribution among the various claimants. This three-fold responsibility naturally extends into many ramifications.

As for production, the War Food Administration seeks to assist the farmer to meet the many production problems which are inherent in wartime farming. It is recognized that farmers need an adequate labor supply, necessary machinery, equipment, fuel, fertilizer, and other supplies, and that he also

needed adequate price supports to enable him to meet his costs of production.

The farm population in 1943 was the lowest in nearly 20 years, about four million less than in 1918. About a million farm workers had gone to the armed services. The War Food Administration's 1943 farm labor program called for a draft deferment policy to keep skilled workers on farms, to return certain skilled workers back to the farm, to assist in recruiting and placing some 31/2 million U.S. Crop Corps workers, to import foreign workers from Mexico, Jamaica, and Bahama, to transport and handle workers from some areas to other areas during seasons of peak labor demands, to stabilize farm wages, and to cooperate with the State and county agencies in encouraging the best use of available townspeople, elderly people, women, students, and children.

The farm families and their regular farm labor were chiefly responsible for the fact that the largest production of food and fiber ever produced in the United States was planted, tended and harvested without any significant losses that could be attributed to labor shortage. (See AGRICULTURE.) This program is being continued in 1944. The output of food per farm worker in 1943 was 61 per cent

higher than in 1918.

The War Food Administration presented to WPB agriculture's needs for farm machinery and succeeded in increasing the allocations so that the total output of farm machinery for the year ending July, 1944, is expected to be nearly as great as in 1940. During the year certain types of farm ma-chinery were apportioned according to relative needs to various parts of the country, and allocated locally by county farmer committees. By the end of the year the 95 types of rationed farm machinery were reduced to 31 types considered most essential to attain food goals. Fertilizers were supplied above prewar levels.

A price support program for the principal and most needed commodities was worked out so that the price pattern would encourage the desired production of the various crops, and would give the necessary assurance to farmers so that they could plan in advance. These price supports were related

to production goals.

The result of these efforts, generally good growing conditions, and the farmer's vigilant efforts, was the largest food production in 1943 of any year in history. Total crop production was somewhat be-low the previous all time record of 1942, but it was slightly more than made up by the increased meat production during the year. Yields averaged slightly lower on a larger acreage.

During the year production goals for 1944 were established after consultation in all the States with representatives of farm groups from all the counties. These production goals call for a larger acreage in 1944 and a larger total food production, particularly of those crops most needed because of the

war demands.

The Office of Distribution of the WFA facilitated a substantial increase in many food processing plants and development of new processing methods arising from war needs. The food processing industry handled 49 per cent more meat, 63 per cent more chickens, 50 per cent more egg products, 14 per cent more dairy products, 29 per cent more fats and oils, and 63 per cent more canned vegetables than the average prewar year. WFA undertook to help protect the requirements of food processors for the necessary labor, equipment, materials, and transportation to enable these results. (See also FOOD INDUSTRY.)

Food distribution programs were designed to secure equitable distribution of scarce foods and to divert foods into the proper channels. These programs included food allocations, food orders, coordinated procurement of food, food conservation, industrial feeding and other programs.

Allocation is the cornerstone of the distribution program. It enables the middle course between the inability to meet the full wants of the American civilians and the full wants of our allies and armed forces. Because of unprecedented civilian purchasing power, the American civilian was able to demand and pay for record amounts of food, greatly above his normal peacetime diet level. Allocation keeps this demand under some control, thus pro-tecting supplies for our armed forces and allies. WFA worked closely with the armed services in

coordinating all the government food buying. Allocation, in cooperation with other agencies, provided 75 per cent of the nation's food production for civilians, the rest going for direct war services —13 per cent to U.S. military services and 12 per cent to U.S. allies and other friendly nations. The diet level of the civilian was maintained at a high level; the total food consumption per capita in 1943 was only slightly below the record levels of 1941 and 1942 and above that of the five year prewar period.

In addition, the War Food Administration, cooperating with OWI and OPA, conducted a nation-

wide educational program in cooperation with all available publicity media, including newspapers, available publicity media, including newspapers, magazines, radio, and motion pictures. This program gave food facts to the citizens under the slogan: "Food Fights for Freedom—Produce and Conserve, Share and Play Square," and appealed to citizens to take individual action to bring about more effective management of food are directive. more effective management of food production and use. WAR INFORMATION, Office of (OWI). The Office of War Information, created by Executive Order of the President on June 13, 1942, is authorized "to formulate and carry out . . information programs designed to facilitate the development of an informed and intelligent understanding at home and abroad of the status and progress of the war effort and of the war policies, activities, and aims of the government . . ." On June 18, 1942, President Roosevelt appointed Elmer Davis as Director of

The activities of the OWI are conducted through two branches, the Overseas Operations Branch, and the Domestic Operations Branch.

The Overseas Operations Branch is charged with planning, developing, and executing all phases of the Federal program of radio, press, publications, and related foreign propaganda activities, bringing information to all countries outside the Western Hemisphere. Propaganda is disseminated in theaters of military operation, or in enemy-oc-cupied countries, the objective being to assist military operations, to confuse and demoralize the enemy by weakening his resistance at home and on the battlefront, and to strengthen the will to resist of people in occupied countries. In allied and neutral countries, including base areas where American troops are stationed, the Office of War Information carries on an information program designed to provide a better understanding of the American war effort and to foster friendliness and good will for the United States. OWI representatives abroad collaborate closely with American diplomatic representatives, and in some instances are attached to the American mission.

The Domestic Operations Branch supplies information to the press, radio, magazines, books, and motion pictures in the United States. In order to prevent confusion in the public mind, the Domestic Operations Branch coordinates official statements of the government, and reviews speeches, radio scripts, motion pictures, press releases, and publications originating in other government agencies when these are concerned with

subjects bearing on the war.

WAR MANPOWER COMMISSION (WMC). The War Manpower Commission was established by Executive Order of the President No. 9134, dated Apr. 18, 1942, for the purpose of assuring "the most effective mobilization and utilization of the national manpower in the prosecution of the war." Paul V. McNutt, Federal Security Administrator, was appointed Chairman and membership was composed of representatives of various Departments and government agencies whose activities were directly related to the problems of manpower (see below for data on personnel).

The need for such an authority was imperative. Since the defense program had first been inaugurated in July, 1940, following the fall of France, significant changes had occurred in the size, composition, and distribution of the labor force. In December, 1941, the total labor force was 56,100,000 of whom 2,100,000 were in the armed forces, 6,500,000 in munitions industries, 6,500,000 in essential nonagricultural industries, 8,300,000 in agriculture, 28,900,000 remained in other than essential industries, and 3,800,000 unemployed.

After Pearl Harbor the whole process was enormously accelerated. Conversion of plants and factories to a war footing proceeded rapidly. New plants sprang up. Employers were building up their payrolls to unprecedented levels. Millions of workers were transferring from civilian industry into war jobs. Vast numbers of women were entering the labor market for the first time and thousands of white collar workers were putting on overalls. Along with this there had set in a tremendous migration of workers with whole families traveling hundreds and even thousands of miles to the new war production centers.

To direct the flow of individual workers into jobs where they could best serve the war effort, to arbitrate the competing claims of employers on manpower reserves and to arrange for the recruitment and allocation of the several million more workers who would eventually be needed—all these things posed a problem of considerable proportion.

things posed a problem of considerable proportion. Of immediate and critical importance was the inadequate supply of skilled labor available. Employers were engaged in extensive pirating practices—hiring needed skilled workers away from other employers by promises of higher pay. The turnover of labor in these categories was causing grave concern.

Another problem was developing which was to prove even more serious. The heavy influx of workers into war production imposed a severe strain on community living conditions. Housing became congested. Bus and streetcar facilities proved insufficient. There were not enough restaurants, laundries, doctors, dentists. Shopping for the simplest items of food, clothing and other family necessities became a problem for the woman working all day. Nor was there adequate provision for the daytime care of the children of working mothers.

In the plants and factories, conditions were equally difficult. There was a lack of sanitary conveniences and restrooms, a lack of proper plant eating facilities, inadequate safety devices, health safeguards. Under the pressure of wartime production, new workers were set at unfamiliar tasks without proper training. Normally efficient management methods sagged and bad scheduling of work

kept many men and women idle for long periods at a time. There was failure to utilize workers at their highest skills or to afford adequate opportunities for upgrading.

As a result, workers in huge numbers were leaving their jobs to seek others in plants and communities where they hoped living and working conditions would be easier. Fatigue and illness figured largely in the growing absentee figures and women especially found it necessary to take time out to do necessary family shopping and to care for sick children.

Furthermore, as a result of this continued drain the hoarding of labor assumed serious proportions, and employers began keeping in reserve large numbers of idle or partly idle workers.

All these factors made for a waste of productive effort and were to be intensified as production pressures increased. They were the main underlying causes of the high rate of labor turnover and absenteeism which became a major and continuing manpower problem.

Before any of these problems could be effectively attacked, a considerable amount of preliminary spade work was necessary. Organization was a first necessity and this had to start from scratch. Personnel for a headquarters staff was gathered together. A National Management-Labor Policy Committee was appointed composed equally of leaders of organized labor and representatives of the employers. The basic policy of "voluntary cooperation of labor and management working with government" was formulated.

For administrative purposes the country was divided into twelve regions and regional offices were set up. These were followed, as rapidly as circumstances permitted, by the establishment of area organizations within the regions. To each of these offices was attached not only a local War Manpower Director but also a local Management-Labor Committee drawn from representatives of both the worker and employer. The avowed purpose was to establish a system of complete decentralization of administration under which necessary decisions could be made and action taken at the local level.

As the War Manpower situation developed it presented itself not as a national problem but a network of intensely local and community plant problems and the inevitable crises which succeeded each other were primarily of this nature. Only from the trial and error methods of these local organizations in meeting their individual crises was it possible to evolve later a basic pattern of operation.

At the beginning, however, most of the activity centered in Washington. Comprehensive studies were made to estimate total manpower requirements for war industry in relation to military, agricultural and civilian needs. The various procurement agencies of the government were directed to supply information as to the relative importance, in respect to the prosecution of the war, of all plants and factories. A list of those activities and occupations most essential to the war effort was drawn up and the U.S. Employment Service directed to give them preference in the recruitment and placement of workers.

To conserve the supply of needed skilled workers, Selective Service was directed to give temporary deferment to workers in essential categories who were necessary to maintain war production schedules. To increase the supply, the efforts of the various government training bureaus were stepped up. Unemployed workers who had been idle for a long time were given intensive refresher courses and workers transferring to war jobs were

taught new skills and methods of work. Employers were assisted in setting up their own plant training programs. At the same time, a vigorous campaign against labor pirating succeeded by "gentleman's agreement" in nearly wiping out this abuse.

Special emphasis was laid upon community living conditions and the WMC worked closely with the Community War Services of the Federal Security Agency and the various other government agencies which were attacking these problems. In many areas, new housing projects were inaugurated, bus service increased, stores were persuaded to stay open one or more nights a week, child-care centers were organized and medical service improved.

Looking forward to an inevitably tightening labor market, extensive campaigns to recruit more women for war jobs were set in motion. Employers were also urged to afford full employment oppor-tunities to older and handicapped workers. The WMC took active steps to put into practice the President's Fair Employment policy which forbade discrimination in the hiring of workers because of race, creed, color, or national origin. At a somewhat later date, standards were established under which youths under eighteen-and school children for part-time work-might be added to the labor force without detriment to their health and welfare.

In September, 1942, a serious labor shortage arose in the nonferrous mining and lumbering in-dustries, following a continued loss of workers to other higher paid jobs and to the draft. An employment stabilization plan by which workers were prohibited from leaving jobs in these industries except for certain valid reasons and other employers were permitted to hire workers recently engaged in these activities only on referral by the USES. Recruiting efforts were less successful and it was finally necessary to furlough for a short time skilled copper

miners from the Army.

An even more serious shortage had been developing in agriculture, for much the same reasons, which threatened the nation's food supply. An Employment Stabilization plan was established for the dairy, livestock, and poultry farms and a whole series of measures were taken in cooperation with the Department of Agriculture for other categories of farm labor to arrest the dangerous exodus of workers into war industry. A directive to Selective Service laid down a liberal policy of deferment for essential agricultural workers. Efforts were made to recruit white collar workers for the farms. Some foreign labor from Mexico, Jamaica, and the Bahamas was imported and during the harvest season some farm workers already in the Army were given furloughs to help harvest the crops.

The fear of a short-handed agriculture, however, brought about the Tydings Amendment to the Selective Service Act (Nov. 6, 1942) which made mandatory the deferment of all essential workers engaged in agriculture. Subsequently, responsibility for the recruitment and allocation of manpower in this field was placed upon the War Food Administration (q.v.). After this, WMC activity on the agricultural front was confined chiefly to the recruiting of farm workers for short-term industrial war jobs during the "off" seasons.

In the meantime, certain general problems of administration had become pressing. The need to coordinate more closely the functions of the United States Employment Service and to enlarge its facilities had become apparent and on Sept. 17, 1942, this Service was placed by Executive Order of the President under the supervision and direction of the Chairman of the WMC. Included also, in this

order, was the National Youth Administration, the Apprentice Training Service and the Training

Within Industry Service.

Similarly, it was found necessary to relate more closely the demands of the armed services with those of war industry—particularly to protect employers against the loss of their skilled workers either through the draft or by voluntary enlistment. On December 5, by Executive Order, the Selective Service System was made an integral part of the WMC, all voluntary enlistments were banned and the Chairman was given complete authority over the recruiting and hiring of all workers.

Area organization was helped enormously by the first order and in the smaller communities, especially, the local USES became the unit around which area activity revolved. At first, this activity was centered around the primary function of sup-plying workers to meet the demands of the employers and in allocating workers on the basis of authorized lists of essential activities and occupations. An extensive inter-area and inter-regional clearance system proved an effective method of bringing together hard-to-find skills and hard-to-

Beyond this, a comprehensive method of reporting and forecasting labor trends was instituted. Each area gathered specific information as to probable labor requirements for the succeeding one month, three months and six months. Manning and Replacement Tables were devised by which an employer could keep a constant check upon the number of workers and types of skill he could expect to lose to the draft and arrange a proper schedule of replacements. As developed, these tables provided for the employer not only a complete inventory of present and future job needs but an analysis of skills demanded, the time factor involved in training workers to acquire these skills, a logical schedule for upgrading workers, the de-gree to which women could replace male workers and other valuable information. For the Area War Manpower Director they provided a factual picture of the local manpower demand as balanced against the local manpower supply. They also set up the storm signals of any approaching labor shortage.

These storm signals were soon being flashed.

During 1942, some 4,000,000 men and women had been added to the effective labor force of the country (including the armed forces) and in most areas, despite the heavy inroads made by the draft, there were still plenty of workers to meet the large and increasing demands of war industries. But in certain areas where war production was most heavily concentrated critical shortages began to appear.

In part, these shortages were due to the fact that war contracts and new facilities were being awarded to plants and factories without reference to the amount of labor available within the community. These communities, eager for increased business, sought and obtained more and more new contracts. And as war industry passed through its initial retooling phase, production schedules were stepped up to higher and higher levels. In the meantime, the supply of workers available to meet these increasing schedules was being rapidly exhausted.

Then, too, these shortage areas were those into which the migration of workers had been the heaviest and where community facilities had been the most severely overtaxed. To import more workers was to impose a greater burden on these facilities; for the most part additional workers had to be secured from the ranks of housewives who were outside the normal labor market and by transferring workers from less essential activities into war jobs.

It was in these areas also that the rate of labor turnover, for reasons noted above, became particularly alarming. The outright loss of productive effort from this cause added to the pressures, as did a serious underutilization of the labor supply in plants and factories which will be discussed later.

Many of the areas affected by these developing shortages had made individual efforts to meet the local situation. Various plans of a widely differing nature had been formulated and put into operation. Some had proved more practicable than others. That of Baltimore, though drawn originally to deal with pirating practices, had enlarged its scope and was dealing successfully with some of these other problems.

In February, a general Policy Statement on Employment Stabilization was drawn up in an effort to codify those regulations and controls which experience had shown to be the most workable. Its primary aim was to reduce turnover and the unnecessary migration of workers and to direct the flow of scarce labor where it was most needed. Gate hiring of workers for designated shortage occupations in essential industries was eliminated by the requirement that all such hiring should be channeled through the USES and certain other recognized placement agencies.

Special emphasis was placed upon the need of organizing community action to improve housing, transportation conditions, etc. which in most areas presented a problem of critical proportions.

This policy statement was not in itself a concrete plan but rather the creation of certain minimum standards upon which local area organizations were to base specific plans when and if such plans were put into operation. Any given area was free to adopt other or more drastic regulations in case the pressure of local problems warranted such action. This included the system of controlled referral, under which workers in certain designated categories and under proper safeguards were required to take those jobs for which their services were most actively needed.

Simultaneously, all areas were classified under the following headings:

Group I—Areas of acute labor shortage. By WPB directive, procurement agencies were enjoined from awarding any new contracts in areas so classified wherever such action was consistent with the required speed of war procurement and unless because of unique facilities it was impossible to award them elsewhere. [It was not, however, until September, 1942, that full recognition was given to manpower considerations in the policies of the various procurement agencies.] The same restriction was placed upon contract renewals.

placed upon contract renewals. The same restriction was placed upon contract renewals. Group II—Areas of labor stringency or in which a labor shortage could be anticipated within six months. In these no new contracts could be placed but renewals were permitted provided no additional workers were required.

Group III—Areas in which a general labor shortage could be anticipated after six months.

Group IV—Areas in which the labor supply was and would continue to be adequate to meet all known labor requirements

Some 32 areas were immediately classified as Group I.

At the same time for the guidance of Selective Service a list of nondeferrable occupations and activities was issued. Its purpose was to promote the transfer into war jobs of those workers of draft age whom a civilian economy in war time could most easily do without. These included the bootblacks, bus boys, elevator attendants, etc., and men employed in the manufacture of costume jewelry, greeting cards or in selling antiques, liquor, novelties, etc. So long as they continued in these jobs

or occupations they could be drafted irrespective of their dependency status.

A few weeks later on March 3 a minimum wartime work week of 48 hours was announced to become operative in the 32 Group I areas and also nonferrous and metal mining, lumbering and the iron and steel industry. [The adoption of the 48hour week remained discretionary with areas classified as Group I after this date until November, 1943, when it became mandatory for all Group I areas.] The effect of this was to curtail the hiring of new workers and release workers for other needed jobs by the fuller utilization of the present labor force.

In April, the President issued his famous "Hold the Line" order which froze all wages at current levels, except for adjustments under the Little Steel Formula or to correct substandards of living. A national regulation therefore was issued under which the transfer of workers in essential activities into other jobs, essential or nonessential, at a higher rate of pay was severely restricted. A worker could secure a "Certificate of Availability," i.e., the right to transfer to another job, only in case he was discharged or laid off for seven days, or where he could establish undue hardship, or that wage or working conditions were below Federal or State standards, or that he was not being employed at full time or at his highest skill.

The necessity of setting up working controls to enforce this regulation resulted in the widespread adoption of local plans even in areas where there were as yet no acute shortages of labor.

The enunciation of this basic program for employment stabilization emphasized an increasing tendency toward decentralized administration. The Washington office restricted itself more and more to general program and policy making and over-all supervision. To the regional and area offices was left the task of interpreting these policies in the light of regional and area conditions and the responsibility of drawing up and executing specific local plans tailored to meet specific local pressures.

In this way there was developed a succession of fairly comprehensive area plans. Those of Buffalo, Baltimore, Dayton and Springfield, Louisville, Hartford, Wichita, and Fort Worth were noteworthy examples. These plans represented varying degrees of control and many incorporated measurements. ures far more drastic than those set forth in the minimum standards.

Taking into consideration the difficulties involved, many of these plans achieved a surprising degree of success. In Buffalo, the number of plants behind schedule was reduced within a few months from 64 to 13. In Dayton and Springfield, Ohio, an intensive community campaign took the area out of a Group I classification within four months. A similar campaign in Louisville, Ky., enabled that area to maintain a Group II status against pressures that were projecting it into Group I. Nearly all, in fact, succeeded in reversing the shortage trends and established a practical basis for further development.

In the meantime, the problem of underutilization of the existing labor supply had been receiving serious attention. In a vast number of plants and factories, this factor was present in proportions sufficient to involve an alarming waste of manpower.

Effective manpower utilization was defined as the "most productive use of the minimum amount of labor necessary for production under working conditions that will maintain worker effectiveness and morale.'

To aid employers in achieving this aim a Bureau of Utilization was established in February, 1943, with technically-equipped consultants to make plant surveys. These surveys were made only at the request of the employer. They were in no sense routine calls, but actual attempts to solve some of the more pressing problems of an employer such as excessive turnover, absenteeism, production lags, low morale, or a breakdown of community facilities.

In many plants, these consultants were able to cut down the time of training new workers by as much as 50 per cent. In others, production per man hour was increased by a thorough re-scheduling of work going through the plant. In others, difficult operations were re-engineered and reduced to simple elements so that unskilled workers could be used, thus releasing scarce skilled workers for other jobs. In others, the more extensive employment of women was indicated to relieve the strain on male employment. Not only was labor-hoarding resolutely attacked, but it was found possible, in innumerable instances, to scale down tremendously -or even cancel outright-the demand for new workers on the part of an employer without endangering full production schedules.

Wherever recommendations were carried through vigorously by the employer concrete savings in manpower were effected and the strain on the area

supply lightened.

During the spring of 1943, the labor market began to tighten rapidly. This was due to the increasingly heavy demands for workers to meet the increasingly heavy schedules of war production; and also to the severe drain on the labor force by the monthly Selective Service calls. More and more areas were classified as Group I and by midsummer the manpower problem had reached an acute

stage.

In a sense, the crisis derived not from the fact that the manpower of the nation had been ineffectively mobilized but because it had been mobilized so well. By July, 1943, the number of men and women either at work or in the armed forces had risen to 63,600,000—an increase of nearly a third over the 1940 figure and representing the largest number of workers ever employed at one time in the history of the country. Of these, 17,200,000 were women an approximate two-thirds increase over the 1940 figure of 10,800,000.

From Pearl Harbor to August, 1943, our armed forces had risen from 2,000,000 to 9,600,000. Despite these huge withdrawals from industry the number of workers engaged in the manufacture of munitions rose from 6,500,000 to 9,600,000.

During this period, the nation had maintained in agriculture a labor force of over 10,000,000 and also a higher standard of living than any other country in the world. But eighteen months after Pearl Harbor, the number of new workers entering the labor market had been sharply reduced. The same thing was true of workers transferring to war jobs and the enormous backlog of some 9,000,000 unemployed with which the 1940 rearmament program had started, was down to the practical minimum of under 1,000,000.

In spite of this there were still heavy demands to be met from industry and our armed forces. Estimated manpower requirements for the period July, 1943, to July, 1944, were put at 3,300,000. [By Jan. 1, 1944, this figure had been revised downward to 2,600,000.] Of these, 2,000,000 were scheduled

to go into the Army or the Navy.

This latter demand presented a two-fold problem. The nation was definitely scraping the bottom of the barrel of its available manpower supply. As of October 1, nearly every draftable single man or "post-Pearl Harbor" father would be in uniform. Aside from those who were unable to meet the physical standards of the armed forces, those remaining were, broadly speaking, the skilled workers in key jobs vitally necessary to the production of war materials and agricultural products. For Selective Service to take these men in order to fill their calls would be seriously to cripple our war industries. The alternative was the drafting of "pre-Pearl Harbor" fathers. This, therefore, was ordered.

To meet the demands of industry, a vigorous campaign was set in motion to recruit a million more women, chiefly housewives, for war-useful jobs and to transfer more workers from less essential activities. The need for more women in the "unglamorous" jobs such as laundries, restaurants, transportation, etc., was especially pressing.

By this time the number of Group I areas has reached 55. Labor turnover was still high, separations averaging 8.2 per cent a month throughout the country and in some areas as high as 29 and 39 per cent. The strain imposed by community and plant conditions was causing vast numbers of women to quit their jobs entirely.

New regulations incorporating a more comprehensive set of employment stabilization standards were drawn up and local programs based upon these standards ordered put into operation, by Oc-tober 15, in every area throughout the country. In essence this program stated that no worker engaged in an essential or locally needed activity could be hired by another employer unless such hiring aided the effective prosecution of the war and no worker could be hired for work in a critical occupation except through referral by the USES.

Along with this program was issued a list of critical occupations and activities and also an expanded

nondeferrable list.

Events, however, were moving rapidly. A particularly serious crisis was developing on the West Coast. Here was concentrated a large proportion of our vital aircraft manufacture and shipbuilding. It was to this region that the migration of labor from other parts of the community had been the heaviest. Turnover was abnormally high and accentuated by certain unfortunate wage differentials in the aircraft industries. Labor-hoarding was especially rampant. Furthermore, this region had been among the last to establish an effective WMC organization.

To meet these conditions it was necessary to tie in the activities of the various procurement agencies with a single comprehensive program. On Sept. 15, 1943, the so-called West Coast Plan was announced by the Office of War Mobilization. This program called for Area Production Urgency Committees and Labor Priorities Committees to determine which establishments had first claim on available manpower. Controlled referral first developed in Buffalo and other communities, made it possible to channel workers into the priority jobs where they were most needed. Other tested controls helped keep them there.

At the same time, establishments were refused priority ratings unless they had instituted a thorough-going utilization program within the plant and could demonstrate that they were making the maximum use of their present labor force. Failing to do this, they were denied the right to hire any more workers and workers already in their employ could be hired away for other priority jobs. In the practical working out of this plan, ceilings were imposed on the number of workers which a plant might hire and employers were forced by utilization and other

methods, to "live within their means."

By the end of the year the West Coast Plan was operating with reasonable effectiveness and the situation was being brought under control. Indications were that the basic pattern established would be adopted by other labor shortage areas throughout the country, the number of which in December had risen to around 70.

By the end of the year there was good reason to believe that, after a long period of necessary trial and error, the WMC had succeeded in developing a sound and workable method of dealing with man-

power shortages.

This conviction was expressed in a statement issued in November by the members of the WMC National Management-Labor Policy Committee which read in part as follows:

The War Manpower Commission has had widespread and varied experiences with locally developed manpower programs under decentralized administration, and with controls of one form or another in various critical situations. In the opinion of the Committee, out of these experiences has emerged a practical approach that is basic to the solution of any critical war manpower problem whether it be local or national in character.

In December, as a result of long public controversy over the drafting of fathers, Congress by legislative action withdrew the Selective Service System from the authority of the WMC. Since, however, the Selective Service Director, on instructions from the President, continues to cooperate closely with the WMC on all matters of policy, the net ef-

fect of the action is of minor consequence.

Certain statistics give some idea of the scope of the WMC activities. From January, 1941, through September, 1943, the USES has placed over 25,000,000 persons in industry or agriculture. The training programs of vocational schools and colleges have enrolled over 6,000,000 for war industry and military jobs. The Training Within Industry pro-gram has enrolled over 870,000 in courses for the training of foremen and supervisors, who in turn have trained hundreds of thousands of workers according to WMC methods. The Apprenticeship Training Service has assisted more than 36,000 in establishing in-plant training courses.

Manning Tables are in use in some 7,000 plants and factories and Replacement Schedules in many thousands more. Labor requirement figures for forecasting labor trends are based upon figures ob-

tained from over 20,000 industrial establishments. The Bureau of Utilization, in the first seven months of its organized activity, made comprehensive surveys in over 1,300 plants throughout the country and recommendations made have resulted in the saying of tens of millions of manhours. Present surveys are being made at the rate of some 250 to 300 a month, concentrated chiefly

in areas of acute labor shortage.

Organization. The War Manpower Commission under the Chairmanship of Paul V. McNutt, Federal Security Administrator, includes representa-tives of the War, Navy, Agriculture, and Labor De-partments, the Federal Security Agency, the War Production Board, the Selective Service System, the U.S. Civil Service Commission, the National Housing Agency and a joint representative of the War Shipping Administration and the Office of Defense Transportation.

The Chairman acts with the advice of the members and after consultation with them and is responsible for the administration of the Commission, the final determination of policy and programs and for the issuance of appropriate direc-

On matters of policy and program, the Chairman consults with two advisory committees:

(1) The Management-Labor Committee composed of R. Conrad Cooper, Assistant V. P., Wheeling Steel Corporation; Frederick C. Crawford, President, National Association of Manufacturers; Eric A. Johnston, U.S. Chamber of Commerce; Philip Murray, President of the CIO; William Green, President of the A.F.L.; H. W. Fraser, President, Order of Railway Conductors of America; Albert S. Goss, Master, National Grange; Edward K. O'Neal, President, American Farm Bureau Federation and Lorent C. Better. reau Federation; and James G. Patton, President, National Farmers Union.

(2) The Women's Advisory Committee, Miss

Margaret Hickey, Chairman.

Clinton S. Golden, Vice-Chairman of the Commission, supervises relations with organized labor and maintains a liaison with the War Production

The Deputy Chairman and Executive Director, Lawrence A. Appley, is responsible under the Chairman for general direction and staff supervision and for the execution of policies and direction of programs. James L. Bond is Deputy Executive Director.

William Haber is assistant executive director for Program Development. This division formulates over-all manpower policies and programs, is responsible for all reports and research, compilation and release of labor market data, and coordinates

the statistical activities of the Commission.

Vernon McGee is Assistant Executive Director for Business Management in charge of budget, fi-

nance, administration, and personnel.

Leo Werts is Assistant Executive Director in charge of Field Service.

The Bureau of Placement (A. W. Motley, Acting Director) develops policies and programs for the recruitment and placement of workers in agriculture and industry, either private or government controlled, through the U.S. Employment Service and other channels.

The Bureau of Training (Philip Van Wyck, Acting Director) develops unified programs and policies to meet the training needs of wartime employ-

The Bureau of Manpower Utilization (Dr. Eugene Bewkes, Director) develops policies and programs to obtain the maximum utilization of manpower in plants and factories under war conditions.

Directly under the Executive Director are twelve Regional Directors and one for the territory of Hawaii. These, in turn, supervise the activities of the State Directors and some 200 Area Directors. Each Regional, State, and Area Director functions with the advice of a Management-Labor Committee composed in equal parts of representatives of

organized labor and employers.

Selective Service Administration; United STATES under Manpower. Compare topics listed

under Manpower.

Paul V. McNutt.

WAR MOBILIZATION, Office of (OWM). The Office of War Mobilization was established within the Office for Emergency Management by Executive Order 9347, of May 27, 1948, to provide for the more effective coordination of the mobilization of the Nation for war. A War Mobilization Committee was established by the same order to advise and consult with the Director of War Mobilization, who was designated Chairman.

For functions and activities, see United States under Office of War Mobilization. The membership

follows:

| Director of War Mobilization       | . James F. Byrnes |
|------------------------------------|-------------------|
| General Assistant                  |                   |
| Public Relations Assistant         | . Walter Brown    |
| General Counsel                    | . Ben Cohen       |
| Adviser on Production              | . Fred Searls     |
| Secretary to War Mobilization Com- |                   |
| mittee                             | . Donald Russell  |

Foreign Production. See Australia, Canada, Germany, Great Britain, and other belligerent countries, under *Production* and *History*.

WAR PRODUCTION BOARD (WPB). The Federal agency charged with the general direction of the U.S. Government's war procurement and production program; established Jan. 16, 1942. (For an account of its predecessor organizations, the National Defense Advisory Commission, the Office of Production Management, and the Supply Priorities and Allocations Board, see those articles in the 1941 or 1942 Year Book.)

The War Production Board, headed for the second successive year by Chairman Donald M. Nelson, underwent a number of organizational changes in 1943, in keeping with changing conditions. As the problems in connection with the supply and distribution of materials diminished, and greater emphasis was placed on full utilization of the war plant which had been built up as well as on the serious shortage of manpower, the organization of WPB was altered to facilitate action on these new problems.

The first and principal change was the creation of the Office of Executive Vice Chairman. To this vitally important post Mr. Nelson appointed Charles E. Wilson, President of General Electric

Company, who had joined the Board in 1942 as Production Vice Chairman. Mr. Wilson was made responsible for conduct of production programs and operations. Subsequently, a Program Vice Chairman and an Operations Vice Chairman were appointed. At the end of the year these positions were filled, respectively, by J. A. Krug, a top executive in WPB and its predecessor, the Office of Production Management, and Lemuel R. Boulware. Mr. Boulware, who joined the Board early in 1942 was serving as deputy controller of shipbuilding at the time of this appointment. Mr. Krug also became chairman of the Requirements Committee.

Other new offices established under the Executive Vice Chairman during the year included those of vice chairmen for manpower requirements, labor production, metals and minerals, and that of a vice chairman in charge of field operations, Facilities Bureau, Bureau of Planning and Statistics, Procurement Policy Division, Office of Production Research and Development, and Resources Protection Board. Filling the latter position was Donald D. Davis, formerly Operations Vice Chairman. Mr. Davis was also chairman of the Facilities Commit-

tee.

The two new vice chairmen for labor problems were Clinton S. Golden, Pittsburgh, Pa., working on labor scarcities and surpluses, and Joseph D. Keenan, Chicago, Ill., responsible for labor productivity. Mr. Golden went to the Board from the position of assistant to President Philip Murray of the United Steelworkers of America (C.I.O.). Mr. Keenan is secretary of the Chicago Federation of Labor (A.F.L.).

In the last days of the year Arthur H. Bunker, former chief of the Aluminum and Magnesium Division, became vice chairman for metals and minerals and as such became directing head of the steel, copper, and aluminum divisions, the Minerals Bureau and the Minerals Resources Coordinating Division and its related compiltees.

ing Division and its related committees.

During the year William L. Batt became Vice Chairman for International Supply. Mr. Batt also was Chairman Nelson's representative on the Combined Production and Resources Board and, by appointment by President Roosevelt, American member of the Combined Raw Materials Board (qq.v.).

New agencies set up during 1943 and directly responsible to Chairman Nelson were the Office of War Utilities and the Office of Civilian Requirements. The first is headed by J. A. Krug, while Arthur D. Whiteside is the vice chairman heading the office which, as a claimant agency, represents the needs of the civilian population in a war economy.

An important development of the year was the increasing responsibility given the thirteen WPB regional offices. Starting with a grant of authority to approve or reject applications for priority assistance in certain limited categories, the decentralization program was extended until, by the end of the year, within policies laid down in Washington, the regional directors were exercising a considerable amount of discretionary judgment.

## WAR PRODUCTION, U.S.

In 1943, the United States war machine, quickly assembled and brought into quantity production during the year following Pearl Harbor, was geared with a higher degree of precision and stepped up almost to peak production. At the same time, many of the raw materials bottlenecks which had developed in 1942 were broken.

By the end of the year plane production had been pushed to reach the goal set by President Roosevelt shortly after Pearl Harbor—more than 8,800 a month. The 66,000 planes delivered in 1943 represent a phenomenal increase over the 6,000 delivered in 1940, the 20,000 in 1941, and the 48,000 in 1942.

In the first six months of 1943 more merchant vessels were delivered than in all of 1942. Month after month the total has been climbing, until the current rate of merchant ship construction is many times higher than the current rate of sinkings. In the second half of 1940, only 33 merchant ships slid down American ways. In 1941 the total was 103; in 1942 it reached 727; and the estimated total for 1943 is about 1,750.

Between January and July of 1943 a hundred warships came off the ways, and shortly after the middle of the year Secretary Knox estimated that by the end of 1943 the size of the American naval fleet would be double its size at the beginning of

the year.

Production of ground ordnance and signal equipment continued to exceed all previous records. Average monthly production in 1941 was almost 41/2 times that of the last six months of 1940. In 1942 the monthly average was 8 times that of 1941, but in 1943 it was about 14 times that of 1941.

Increases in war production have been paralleled by increases in war expenditures. The average daily rate of war expenditures, which had jumped from \$81,200,000 to \$235,600,000 in 1942, progressed from \$240,500,000 in January, 1943, to

\$299,800,000 in November.

By the beginning of 1943, many steps in transforming America into the "arsenal of democracy" had already been taken. Conversion from peacetime to war production was no longer a major problem. America's Government-financed war plant was 61 per cent completed. The industrial facilities program—including construction, machinery, and equipment—which had been put in place by the end of 1942 reached a total of approximately \$12,294,000,000 and was expected to reach \$17, 564,000,000 by the end of 1943. Throughout 1943 the rate of facilities construction moved along a planned decline, with the result that more and more of the nation's resources could be thrown into direct production of munitions. By July, the facilities program was more than 80 per cent completed. At the year's end, except for certain special programs, and some special machinery, the United States had all the machine tools and the capital equipment it needs to produce everything necessary to defeat the enemy

Materials. A continuing problem since the beginning of the war has been that of providing sufficient raw materials. Domestic production of ma-terials had to be increased, available foreign sources had to be developed, and strict economy had to be practiced in the use of all materials, so that the goals for the production of finished war goods could be met. Though many difficulties remain to be surmounted, great strides have been made in increasing the materials supply, and many obstacles that seemed insurmountable in 1942 were hurdled in 1943. See Forest Products; Rubber; and the articles on minerals and metals, particularly ALU-MINUM, CHROMIUM, COPPER, IRON AND STEEL, LEAD, MAGNESIUM, MANGANESE, MOLYBDENUM,

NICKEL, TIN, TUNGSTEN, VANADIUM, ZINC.

Balanced Production. Balance—between supply of materials and finished end products, between finished end products and the dictates of the war program-plus timing are the prime essentials in efficient war production. Each manufacturer must be assured of receiving exactly the right amounts of materials and parts, at the right time, so that he can turn out his product according to schedule. The manufacturer of aircraft, for example, must have enough aluminum sheets, aluminum extrusions, propellers, aircraft engines, and other materials and parts available on his production line, when he needs them, to meet his production program. Also, the relationship between the number of propellers and the number of aircraft engines made for a certain type of plane must be exactly right. Over-all production must be so balanced that the right number of tanks are made in relation to ships, for example. At the same time, U.S. production must be coordinated and integrated with that of the other United Nations.

To insure a measured, steady flow of raw materials to war plants, WPB devised the Controlled Materials Plan, in operation since April, 1943. Under this plan, WPB divides the available controlled materials-copper, steel, and aluminum, in specified forms and shapes—among the "claimant agencies," such as the Army, Navy, Maritime Commission, and others, charged with procuring the essential military and civilian needs of the United States and the other United Nations. Each claimant agency, in turn, adjusts its program to fit its share of materials and divides it among the manufacturers who will fabricate it into finished products according to prearranged time schedules.

But CMP, though it solves the biggest-if not the toughest-problem of scheduled production that of material shortages—cannot insure that all the necessary parts, particularly the critical ones, with wide uses in war production, are available for fabrication into a plane or tank or essential civilian item at the time and place required. For lack of enough bearings, a fan, or a compressor, a vital war machine may not be assembled accord-

ing to schedule.

Scheduling production of hard-to-get parts, or critical components," as they are commonly called, was WPB's biggest production job in 1943. It was accomplished by means of scheduling procedures established in a General Scheduling Order issued in February. The order requires manufacturers to indicate realistic delivery dates for parts that are in insufficient supply, and assures that the plants best able to produce particular types of critical parts produce those parts and leave production of other types to other plants. These procedures are similar to the scheduling devices of CMP, except that specified critical components, instead of raw materials, are channeled to the war plants. The measure of their success is clearly indicated by the steadily rising curve of war output.

Over-all scheduling of production, of major importance from the first, in 1943 became more necessary than ever. Scheduling is the keynote of efficiency, and the only way the United States car. now produce what is demanded, and in the proper proportions, is to make increasingly better use of plants, materials, and manpower already employed

in war production.

The slack we had two years—or even a year ago has now been pretty well taken up. Manpowe: is particularly short. Millions of additional worker will be needed to produce aircraft, ships, munitions and other war equipment if the goals set for 1944

are to be achieved.

It was a fairly simple matter, in the beginning to transfer resources from nonessential to essentia uses. Now a more difficult choice—between es sential and more essential uses-must be made Increasing the production of one weapon of wa may mean reducing the output of another. Ad justments in the production machine must be more exact than ever before. Because the raw materials used in one type of product are more urgently needed for another type of product, plants may have to be shifted from one type of production to another. When the immediate requirements for one kind of war goods have been met, production may have to be discontinued or reduced temporarily.

A considerable amount of reconversion has already been effected. One plant, built to make recoil mechanisms for cannon, has been changed over to make struts for aircraft landing gear. Another plant, constructed to make tank armor, is now producing engine cylinders. Certain ammunition plants are now producing aircraft engine parts and accessories. Other plants, built for the production of airplane engine accessories, are producing small

arms for the Army.

Besides adjustments such as these, other adjustments are needed to mesh the U.S. war production program into the production programs of the other United Nations, in accordance with over-all military requirements. Coordination and integration on an international basis are effected through the Combined Production and Resources Board and the Combined Raw Materials Board (qq.v.), made up of representatives from the United Kingdom, Canada, and the United States, working in close collaboration with the Combined Chiefs of Staff. The Combined Boards survey the over-all demands of the United Nations in relation to the available supply of critical materials and products, such as rubber, coal, steel, copper, hides and leather, wheeled vehicles, internal combustion engines, and others. Their recommendations for combined action, designed to achieve maximum utilization of available resources as well as the most economical use of shipping facilities, are then passed on to the production agencies of the nations involved. For example, a recent recommendation of the Combined Boards with respect to effecting increased output of coal in British mines will be carried out through the offices of WPB in 1944. About one-fourth of the requirements of the British coal mining mechanization program for this year will be met by U.S. production.

Conservation of Materials. Simultaneously with the step-up in demand for raw materials, the importance of enlarging and replenishing the country's stockpiles through conservation has increased.

For example, in 1942 a nationwide fuel conservation campaign had been initiated. In September, 1943, WPB, in conjunction with other Government agencies and private industry, found it necessary to launch another nationwide program, to induce every industrial and commercial plant as well as every private citizen in the United States to conserve not only coal, oil, and gas, but also electricity, water, and communications and transportation facilities. Even a reasonably economical use of coal for domestic and commercial heating is expected to save over 20,000,000 tons annually. A ten per cent reduction in use of electricity will save over 4,000,000 tons of coal or its equivalent and more than 75,000,000 lamp bulbs. A ten per cent reduction in the use of manufactured gas will save over 1,500,000 barrels of fuel oil.

As the materials, facilities, and manpower needed for production of shipping containers became increasingly scarce during the year, reuse of existing containers developed into a "must." Metal was so urgently needed for war purposes that none could be used for containers unless no other material would serve. The consumption of wooden containers was 25 per cent ahead of all available sup-

plies. The production of fiberboard for corrugated containers was running thousands of tons a week behind actual consumption. Narrow-mouth glass jars were 18 per cent oversold, and wide-mouth glass 26 per cent oversold. Importation of textiles for bags was difficult, and domestic production facilities were inadequate to meet the increased demand. To give immediate impetus to the conservation of shipping containers through their reuse by manufacturers, wholesalers, and retailers everywhere in the United States, the Containers Division, WPB, launched its Container Re-Use Program in October.

Another new campaign aims to alleviate the serious shortage of good quality rope and cordage. The Cordage Institute developed the campaign in cooperation with WPB, launching it on October 1, only two months after the idea was originally broached by the War Advertising Council. The campaign is directed primarily to manufacturers of rope and cordage, and through them reaches users with the message that their existing supplies of rope must be carefully handled so that the hard fiber content will "last and last and last." The campaign material was paid for by the industry.

A program to conserve cutting tools has been in operation for several months and lately has received new impetus from the growing shortage of

labor for making replacement tools.

Since the beginning of the war, thousands of tons of critical materials as well as countless man hours have been made available for war production by simplifying and standardizing the designs, models, and sizes of industrial products, by substituting less scarce materials for the more scarce, by salvaging materials that prewar America threw onto the junk pile, and by revising specifications.

Simplification and Standardization. As in 1942, simplification—the elimination of unessentials from an item or a line of items—and standardization—the restriction of production to certain specified types of items in a given line—were effected in various

lines of goods in 1943.

Since March 15 new wood furniture patterns have been prohibited, and since July 1 each manufacturer has been limited to production of 35 per cent of the patterns he offered in September, 1941, or 24 patterns in all, whichever is greater. Simplification has enabled the furniture manufacturer to make the most efficient use of still available materials and labor. Luggage production was limited to seven standard types, but each manufacturer was permitted to produce these types in as many as 14 different styles. Similar simplification and standardization orders were issued to cover silver plated flatware, greeting cards, various types of tools and hardware, blankets, knitwear, and other items.

Equipment for the armed forces has likewise been simplified and standardized wherever possible, not only to save materials, labor, and facilities, but also to facilitate replacement of parts. For example, early in the year the number of basic air-cooled gasoline engine models was reduced by 50 per cent, and each basic model produced by a given manufacturer was made to take a single type of carburetor, muffler, air cleaner, spark plug, and other parts. A uniform parts-and-maintenance manual was also accepted.

Substitution. Synthetic rubber, brought into higher production in 1943, was employed for an increasing number of uses as a substitute for natural rubber, notably in making tires. The camelback for recapping, on which most motorists will ride for some time to come, is made of a combination of reclaimed

rubber and 40 per cent Buna S and is now available in greater quantity and better quality than it was earlier in the year. Buna S is also standard for tires for motorcycles, bicycles, tractors, wheelbarrows and other implements, and truck and bus tires

in the smaller sizes.

Ceramics and glass continued to replace metals for such items as cooking utensils and dress accessories. In the early part of the year, research was begun in connection with ceramic stoves, and by the end of the year a satisfactory ceramic cooking stove model, weighing less than one-third as much as the 1,035-pound prewar metal type which it sup-plants, had been developed. Actual production is expected to be under way in the early part of 1944. Use of ceramic cooking stoves and ceramic space heaters, now also in the final stage of development, will not only conserve metal, but also utilize existing ceramic facilities to a fuller extent.

Wood and paper continued to be used as substitutes, but the increased demand for these materials, in the face of a declining supply of manpower, has caused a scarcity of these in turn, and their use as substitutes is being limited. (See For-EST PRODUCTS.) Plastics (q.v.), formerly regarded as substitutes, have become so critical that they may be used only where they can serve a particular purpose better than the material they replace. Certain other materials, though critical, have also come into use as substitutes because they are relatively less scarce than the materials they replace. Steel, for instance, replaces copper in the new penny, carbon steel takes the place of stainless steel in kitchen cutlery, and shoe eyelets, formerly of brass, are now made of zinc-coated steel.

An important saving has been accomplished in packing boxes for caliber .45 ammunition. Formerly lined with terneplate, which is steel covered with an alloy consisting of approximately 25 per cent tin and 75 per cent lead, they now have a wax-dipped liner. By the elimination of solder, along with terneplate, an additional 7 pounds of tin for each

100,000 rounds is saved. Facilitation of production through the use of castings, pressings, assemblies, and stampings instead of large forgings is a type of substitution which has enabled the Navy to specify alloys and products that are more easily manufactured to replace those involving longer and more expensive methods. Another example of substitution by the Navy is that of the use of reclaimed and synthetic instead of crude rubber in the manufacture of self-

sealing tanks for airplanes.

Salvage. Salvage of waste paper and collection of iron and steel scrap are the most urgent problems currently fostered by the Salvage Division of WPB. At the same time that military and industrial uses of paper have skyrocketed, manpower shortages in the woods have kept the production of wood pulp for containers and other products almost 25 per cent below that of 1942. Waste paper salvage is of crucial importance in alleviating the wood pulp shortage. Early in 1943, the Salvage Division renewed its drive for the collection of old containers, kraft paper, and brown paper in localities where waste material dealers were equipped to handle it. In July the drive was extended to include all grades of paper and all parts of the United States. At the end of the year waste paper was being collected at the rate of 500,000 tons a month, still more than 100,000 tons short of the amount needed by the paper mills.

New impetus was given to the continuing program for the collection of iron and steel scrap by the inauguration on October 1 of the "Victory "Victory

Scrap Bank," a special drive to bring lagging collections to a total of 15,000,000 tons for the last six months of the year. Maintaining a safe margin in the supply of scrap to carry out a munitions production program twice as big as that of 1942 has been a major problem in 1943. The coal strike, which caused increased use of scrap in steel furnaces, further aggravated the problem. For this reason, the drive, scheduled to be terminated November 15, was extended indefinitely. The scrap drive is being conducted through 16,000 salvage committees and scores of organizations with more than a million volunteers, who work in conjunction with local scrap dealers and see that scrap is col-lected and "deposited" in the community "scrap bank," for industry to draw upon as needed. Industry, through its own salvage committees, is working to bring collections of industrial scrap to a total of 9,800,000 tons for the last half of the year.

Collection of household fats, initiated in August, 1942, reached a peak of almost 8½ million pounds in June, 1943, and then declined slightly. Estimated total for the year was 115,000,000 pounds, about 57 per cent short of the 200,000,000 pounds needed for glycerin production. Collections in 1944 are expected to reach a grand total of 230,000,000 pounds, chiefly through the cooperation of the Soap and Glycerin Manufacturers' Association in extending financial support for advertising.

Though by the end of the year the impressive total of 200,000,000 tin cans, or 20,000 tons, was being collected for detinning and other war purposes each month—20 times as many as at the beginning of the program—two out of three tin cans that go into homes were still being lost to the war effort. Facilities are available to handle 400,000,-000 salvaged tin cans, and that number will be the

goal of the 1944 campaign.

The salvage of silk and nylon stockings for use in the manufacture of powder bags, parachutes, and other military items was discontinued September 30, after a grand total of more than 50,000,000 pairs had been donated by the women of America in the eleven months during which the campaign was in operation. Since no silk or nylon had been available for the manufacture of hose for some months previous to that date, the proportion of these materials in relation to the poundage collected had been declining steadily.

Revision of Specifications. Government specifica-tions must be continually revised and new requirements established in order to keep pace with rapidly shifting stockpiles of vital war materials. Working closely with the Army, Navy, and other interested Government departments, WPB's Conservation Division, by means of its specification projects, has been tackling the problem of conserving materials in limited supply, finding substitutes for the most critical materials, and bringing specifications in line with the changing supply picture.

The number of Government department specifications already revised or under development is mounting well past the 800 mark. The materials and products for which Federal specifications have been completed or are currently being prepared include: brass and bronze castings and ingots, aluminum alloy castings, salt spray corrosion tests, paint colors, rubber, plastics, paper, 66-gallon steel drums for gasoline, brushes, and certain types of containers.

Civilian Requirements. In 1943, for the first time since the beginning of the war, the problem of providing civilians with the goods they need to maintain their health and working efficiency began to reach an acute stage with respect to certain categories of items. Until the middle of 1942, inventories were sufficiently large, and the war program left enough resources free to supply aggregate civilian demands at an expanding volume. At the same time, the increased individual incomes obtained from war production and related activities insured that these expanding demands would result in actual purchases. Since that time inventories have been falling, while manpower and facilities for civilian production and distribution have been seriously reduced. Peak war schedules are placing additional claims on our national resources.

The Office of Civilian Requirements, successor to the Office of Civilian Supply, WPB, in fulfilling its function of maintaining production and distribution of all essential civilian goods insofar as is consistent with demands upon materials, facilities, and manpower for war production, is taking various steps to correct this situation. By directing manufacturers or distributors of such urgently needed items of farm equipment as shovels, forks, and the like to set specified quantities of these products aside for farmers, OCR is making it easier for farmers to get the equipment they need to meet the high food production goals. Priority assistance has also been given to manufacturers of needed types of baby goods, to replenish the falling supply.

A continuing project of OCR has been a nation-wide survey, culminating in the questioning of 5,739 households and conducted according to the best modern survey techniques, to determine what shortages in civilian goods are causing actual hardship, what products in short supply are in most acute demand, and whether available supplies are being fairly distributed. Future action by OCR will be based in large measure on the results of this survey.

WAR RELIEF. For statistics, see the article which follows; also Algeria, China, Greece, Tunisia, and Union of Soviet Socialist Republics, under History; Red Cross; Relief and Rehabilitation.

WAR RELIEF CONTROL BOARD. The President's War Relief Control Board was established by Executive Order, July 25, 1942, following recommendations of a committee appointed by the President, at the request of the Secretary of State, as to what steps should be taken to assure the efficient and economical administration of resources for war relief and welfare at home and abroad. Mr. Joseph E. Davies, former Ambassador to Russia, is Chairman, and Charles P. Taft, Director of the Office of Wartime Economic Affairs of the Department of State, and Mr. Charles Warren, former Assistant Attorney General, are the other members, all serving without compensation.

The Executive Order transferred to the Board the administration of provisions of Section 8 of the Neutrality Act of 1939 relating to the solicitation

and collection of funds and contributions for relief purposes in belligerent countries formerly vested in the Secretary of State. All matters within the jurisdiction of the Board relating to the foreign policy of the United States, however, are determined after conference with the Secretary of State.

The Board is authorized to control, in the interest of the furtherance of the war purpose, all solicitations, sales of merchandise or services, collections, receipts, and distribution of funds and contributions for (1) charities for foreign and domestic relief, rehabilitation, reconstruction and welfare arising from war-created needs in the United States or in foreign countries; (2) refugee relief; (3) relief of the civilian population of the United States affected by enemy action; or (4) relief and welfare of the armed forces of the United States or of their dependents; "Provided, that the powers herein conferred shall apply only to activities concerned directly with war relief and welfare purposes and shall not extend to local charitable activities of a normal and usual character nor in any case to intrastate activities other than those immediately affecting the war effort."

ing the war effort."

The foregoing provisions do not apply to the American National Red Cross or to established religious bodies which are not independently carrying out any of the activities specified.

The Board is authorized to provide for the registration or licensing of persons or agencies engaged in any of the classes of relief and welfare activities as defined above. The Board also certifies eligible agencies for inclusion in the National War Fund established at its suggestion to conduct a single national appeal for all major war charities with the exception of the American Red Cross.

All registered agencies submit a periodic report to the Board including a statement of finances, the source of all monies received and expenditures for relief, administration, and other related purposes. A summary of these reports is compiled and published quarterly.

The Board transmits to the President reports and recommendations regarding war charities and the relationship of public and private organizations, resources, and programs in these fields.

Relief Statistics. Funds contributed during the year as reported by agencies engaged in foreign relief, registered with the Board, amounted to \$47,852,-035. Of this sum, \$30,955,695 was reported as expended for relief in sixteen countries. Five countries—China, Russia, United Kingdom, Greece and Palestine—accounted for 90 per cent of this relief. The remaining \$11,332,530 collected during the year was for refugee relief and other relief of an international character. It is estimated that outstanding reports will increase funds contributed to about fifty million dollars for the year.

Contributions in kind of a dollar value of approximately \$12,708,145 were also reported as received during the year. Of this amount approximately \$9,928,947 worth was shipped abroad.

Total contributions and disbursements for all

Total contributions and disbursements for all foreign relief since September, 1989, when agencies engaged in foreign war relief activities were first registered, are as follows:

| Cash<br>Contributions in kind | Receipts<br>\$128,377,749<br>32,856,793 | Disbursements<br>for Relief<br>\$103,819,010<br>30,127,595 |
|-------------------------------|---|--|
| Total                         | 161,234,572                             | 133,946,605  |

It should be understood that the figures above refer only to foreign war relief activities. (Also, the reports of a few agencies were still outstanding at the time these statistics were compiled.) The number of registered agencies engaged in such work at

the close of the year was 101.

There also were twenty-five agencies who were engaged in domestic welfare on behalf of the Armed Forces and the Merchant Marine. Their total contributions are not available, but \$65,352,000 was included in the National War Fund campaign for 1943 for these Services. See NATIONAL WAR FUND.

JOSEPH E. DAVIES.

WAR RELOCATION AUTHORITY (WRA). During 1943, the War Relocation Authority, a special wartime agency created to provide for the 110,000 persons of Japanese ancestry who were evacuated by military order from the Pacific Coast, focused its attention on the relocation of eligible evacuees on farms and cities throughout the Middle West and East. Pending relocation the WRA maintained the evacuated people in wartime communities known as relocation centers. Ten such centers were operated. At the beginning of the year only 400 evacuees had left these centers to accept private employment. By the close of 1943, however, nearly 17,000 persons had resettled across the country. Another 8,500 had left the centers on seasonal jobs, most of them in agriculture

Leave privileges were extended to all evacuees except those whose records indicated that they might endanger the national security. Before granting leave permits, however, WRA explored community sentiment in the resettlement area to insure a satisfactory reaction to evacuee relocation. Job offers were carefully examined to provide the best qualified applicants and to prevent dissatis-

faction after relocation.

In order to accelerate the relocation process, the Authority early in the year established field relocation offices in a number of key cities throughout the Middle West and East. Contacts between private employers and evacuee workers at the centers were thus facilitated. Focal areas for reloca-tion were in the Great Lakes States and the intermountain West. Fifty per cent of evacuees re-settled were either agricultural or domestic workers, the remainder being composed of various occupational groups such as office workers, technicians, service and sales employees, and professional workers. Large cities, particularly Cleve-land, Chicago, Denver, and Salt Lake City, absorbed the greatest number of evacuees.

One of the most far-reaching events of 1943

was the registration of all male evacuees 17 years of age or older, which was carried out in conjunction with an Army recruitment drive for volunteers. On January 28, the Secretary of War reopened the ranks of the Army to Japanese American volunteers, after having halted all inductions of persons of Japanese ancestry shortly after Pearl Harbor. This registration and recruitment drive provided not only background information for the use of military authorities and Selective Service, but also provided basic data for determining individual loyalty and eligibility for leave clearance. A direct result of the drive was the recruitment of 1,200 Japanese American boys from relocation centers for

eventual combat service.

In the late summer of 1943, the Authority began the segregation of all persons who, by word or action had indicated that their loyalties lie with Japan. By the end of October, approximately 15,000 evacuees had been segregated at Tule Lake center in Northern California. Included in this group were: (1) evacuees who had previously applied for repatriation to Japan, (2) citizen evacuees who refused to pledge unqualified loyalty to the United States, (3) persons whose past records cast doubt on their loyalty, and (4) immediate family relatives of persons in the first three categories. It was expected that the entire segregation process would be completed early in 1944. See Opinion Research Center, National.

Officers. The Governor is Arthur B. Langlie (Rep.), inaugurated in January, 1941, for a four-year term; Lieutenant Governor, Victor A. Meyers; Secretary of State, Mrs. Belle Reeves; Attorney General, Fred E. Lewis. See AQUEDUCTS; DAMS.

WATER SUPPLY AND PURIFICATION. Insuring adequate and safe supply of water is a problem for many cities, owing to normal growth of population and sudden increase by the establishment of new war industries, with consequent necessity of seeking new and more distant sources of supply. New communities and housing projects must also be supplied with water, meeting the requirements of the Federal Housing Administration. Several large cities supply smaller neighboring communities un-der varying forms of agreement. In Wisconsin, the State Public Service Commission ordered Milwaukee to supply an outlying area, but the city objected. The circuit court upheld the Commission, but the State Supreme Court held that the Commission had no power to order the munic-

WATER SUPPLY AND PURIFICATION

ipally owned utility to serve customers outside the city limits; but it also held that a community taking water from a city is free to resell the water to another community. In large cities, the average resident pays monthly 97 cents for water service

and uses 5,000 gals.

Conservation of present supply may avoid or postpone the provision of an additional source. Systematic stopping of leaks in pipes, pumps, plumbing, and meters is an important step. At Philadelphia, a water-waste survey detected 988 leaks totaling a loss of some 20-million gallons daily, equivalent to a saving of 33 tons of coal daily for pumping. A similar study at Allentown, Pa., avoided the great expense of an additional supply to meet increased consumption following industrial expansion. At army posts, the results of such surveys have exceeded expectation. Other means of insuring full use of the supply available include: cleaning mains, metering, elevated storage instead of direct pumping, elimination of flush tanks and improvements in the distribution system.

In many cases, however, additional supply is essential. Surveys have been made to relieve Denver by diverting the Blue River into the Platte River, from which the city draws its supply. The increased supply would be used partly for irrigation. At Rochester, N.Y., an 8-mile conduit from Hemlock Lake, abandoned in 1935, was reconditioned to increase the reserve capacity. To guard against possible sabotage of the present supply system of New York, a 42-mile length of the 85-mile tunnel to the Delaware River was put in service to bring water from areas which already serve the Croton and Catskill aqueducts. Several cities in war zones in New York State have coperated for mutual aid by interconnecting their water systems and pooling stocks of material and

equipment.

A typical situation in water shortage is at Baltimore, Md., where demand on the existing Gunpowder River supply is nearing the danger point, as a result of increased population and war industries. The citizens defeated a proposed bond issue of \$32,000,000 for a new supply, and as an emergency measure a loan of \$12,500,000 was secured for obtaining 40,000,000 gal. daily from the north branch of the Patapsco River. This will be pumped through a 60-in. concrete pressure pipe, against 250 ft. head, to a 6,000,000-gal. sedimentation basin. Thence it will flow by gravity to the filtration plant, 12 miles across the city, through 7½ miles of 48-in. concrete pipe and 4½ miles of tunnel lined with 7-ft. concrete pressure pipe. Contract has been let for a 4½-mile tunnel from Lake Ashburton to the existing filtration plant. This loan will also provide for securing the necessary property for a future dam and reservoir ten miles further upstream, with new filtration plant. The cost of this proposed permanent project will be about \$23,000,000.

A critical situation as to inadequate supply at both Detroit (Highland Park) and Philadelphia led to an unusual cooperation. The latter had been obliged to defer a much needed \$18,000,000 project for new pumps and treating facilities, but had been granted emergency priority for new pumps to handle filtered water at the Lardner's Point plant. At Highland Park, having the largest defense plants in the Detroit district, there was serious lack of pumping capacity, but new pumps were not obtainable. By a lend-lease agreement, Philadelphia loaned to Detroit for four months four electrically driven pumps of 40,000,000 gal. daily capacity, built for Lardner's Point station.

Increasing salt contamination of water from the Cape Fear River at Wilmington, N.C., has led to plans for a 30-mile conduit to a pumping station further upstream. But after contracts had been let, the War Production Board required a change to a temporary plan with intake only 8 miles upstream. New steps have been taken in the old con-

New steps have been taken in the old controversy over pollution of the southern end of Lake Michigan, where Chicago takes a supply for the south part of the city. The city has brought suit for injunction against the State of Indiana and a group of cities to stop the pollution due to sewage and industrial wastes. It is also seeking permission through Congress to increase its draft of water from the lake to 5,000 cubic feet from the present limit of 1,500 cubic feet per second. With increased flow from the lake through the Calumet River to the Chicago drainage canal, the pollution would not enter the lake. A proposed lock in this river, as in the Chicago River, would prevent floods from reversing the flow and carrying pollution into the lake. Such increased diversion is opposed strongly by other States bordering on the Great Lakes.

The great \$23,000,000 filtration plant at 79th St., Chicago, to serve the southern section of the city, is now 65 per cent completed, at a cost of \$13,000,000. Delays have been due to priority restrictions on machinery and equipment, but these have been relieved and it is expected that the plant will be completed in 1944. It will have a capacity of treating 320,000,000 gal. daily, serving a population of 1,250,000 in the city and 100,-

000 in suburban communities.

Army water stations at the end of 1942 totaled 1,044, of which 344 purchased their water, while the others had their own supplies; 144 had filtration plants. Of fixed army posts, 38 per cent purchased their water, 41 per cent had wells, and 21 per cent had surface supplies. Waste-prevention methods reduced the daily consumption from 102 to

70 gallons per capita.

Because of war conditions and the drafting of men into the army, maintenance of municipal plants has slacked, so that when conditions improve there will be need of heavy repair and replacement. Recruiting and training of auxiliary and volunteer personnel has become necessary, to insure fair maintenance and safe operation of treatment works. For assistance in promoting postwar projects, the American Water Works Association and similar organizations have formed a joint committee to work with local authorities in appraisal of needs, selection of methods of treatment, preparation of plans and making financial arrangements. It is urged that such preliminaries should be dealt with now, so that projects may be ready for construction as soon as the war is over. Furthermore, it is considered that planning and financing should be handled by the communities concerned.

Water purification has not been affected materially by war conditions, according to a report of the American Society of Civil Engineers, except in delay of improvements at a few cities. As a rule, the supply of chemicals has been sufficient. There remains a tendency toward a higher degree of chlorination for removal of bacteria. A subsequent ammonia treatment for dechlorination is being tried, but appears to be no more effective and to give no better taste than straight chlorine. Experimental work has been continued. Removal of manganese from water has been necessary at some Illinois towns, as it causes brown spots in laundered goods. Removal is effected mainly by the

use of chlorine.

For control of tastes and odors in water, activated carbon is used in about a dozen municipal plants and several army posts. Of 5,372 treatment plants serving 62,500,000 people, 50 per cent (serving 19,400,000) use chlorination as the principal treatment, supplemented in many cases by aeration, sedimentation, or coagulation. About 188 plants (serving 500,000) employ some other treatments of the control of th ment than filtration and do not use chlorine. Supervision and treatment of water for military posts and training camps has been effective in maintaining a high degree of health among the sol-diers. On the other hand, study of the epidemic of poliomyelitis showed that ordinary methods of water purification (coagulation, sedimentation, filtration, and aeration) do not effect complete removal of the virus, but that ultra-violet irradiation is more effective than any other method.

One remarkable development is the rendering of sea-water safe for drinking by means of certain chemicals. Records of disasters at sea have many instances of wrecked men in boats dying from the use of sea-water to quench intolerable thirst. Compressed cakes of the material are carried on ships'

rafts and life boats.

Of 1,279 communities in Canada having water works, 482 have populations under 500. For improvement and expansion of the water system at Cuernavaca, Mexico, the city has a government loan of \$225,000, and other projects are under consideration in that country. At Pretoria, South Africa, a great increase in consumption due to war developments has caused a shortage, which is being made good by temporary measures, the planned new supply from the Vaal River being deferred until after the war. At Port Elizabeth, South Africa, the war shut off the supply of steel pipe to reach a new source, but temporary relief is to be afforded by tapping a natural reservoir formed by a deep hole or sump in the Kromma River. Retreating German forces in Tunisia poi-soned water sources, but the technical corps of the Allied forces tested all wells and purified water for the troops by means of mobile chemical units.

See AQUEDUCTS; DAMS; GEOLOGICAL SURVEY;

SANITATION.

### E. E. RUSSELL TRATMAN.

WATERWAYS, Inland. The opening, in July, 1943, of the new MacArthur lock at Sault Sainte Marie, Mich., in the canal connecting Lake Superior with the lower lakes, was the most important event of the year in the inland navigation system of the United States. The enormous traffic through this canal, amounting to 178,600,000 tons in 1942, of which iron ore was 92,000,000 tons (and estimated at 86,500,000 tons for 1943) demands special facilities, especially as navigation is closed usually by ice for four or five months. There are now four parallel locks in this canal, overcoming a difference of 22 ft. in water level. A lock built by the State of Michigan in 1855 was 250 x 60 ft., and was supplemented in 1881 by the first Federal lock, Weitzel lock, 515 x 80 ft. In 1896, the Poe lock, 800 x 100 ft., was built on the site of the State lock; the Davis lock, 1,350 x 80 ft., followed in 1914 and the Sabin lock of the same size in 1919 1914, and the Sabin lock, of the same size, in 1919. Then in 1943 came the MacArthur lock, 800 x 80 ft., built on the site of the Weitzel lock, with 31 ft. of water on the gate sills.

While traffic on the inland waterways has increased generally under war conditions, to relieve or supplement the heavily burdened railways, the service is principally for bulk freight and the movement is necessarily slow. Rivers and the Great Lakes constitute by far the greater proportion of these waterways, with only a relatively small mileage of canals. On that part of the New York State Canals connecting the Hudson River with Lake Ontario, the channel between locks has been deepened to 14 ft. and widened to a bottom width of 104 ft. in earth and 120 ft. in rock. Raising 28 bridges to give a clearance of 20 ft. above the water is deferred until after the war.

To open navigation earlier than usual, ice-breakers were used on the Upper Mississippi (St. Louis to St. Paul), the Illinois Waterway (Lake Michigan to the Mississippi), the canal at Sault Sainte Marie, and the Straits of Mackinac. There are projects for deepening the channel in the Mississippi from Cairo to Baton Rouge, 345 miles, and for a ship canal practically parallel with the river from New Orleans to the sea, about 70 miles. On the system of waterways operated by the gov-ernment-owned Inland Waterways Corporation (which includes the Mississippi River and several tributaries), the freight handled in 1942 totaled 306,333 tons; this was a decrease of nearly 12 per cent from 1941, due in part to the stoppage of ocean shipments from New Orleans. New types of equipment are appearing, with oil-engined twin-screw and triple-screw towboats displacing the typical river boats, with their lofty superstructures.

tall smokestacks and huge stern or side wheels. On the Intracoastal Waterways, formed by dredging and connecting lagoons which parallel the coast line, a minimum channel depth of 12 ft. has been made available by the Corps of Engineers, U.S. Army, throughout the Atlantic section, from Trenton, N.J., to Jacksonville, Fla. On the Gulf Coast section, work is in progress in widening and providing a depth of 12 ft., from Carrabelle, Fla., to Corpus Christi, Texas. This section will be extended to the Rio Grande, the Mexican bound-

ary, after the war.

With the completion of its Kentucky dam and lock in 1944, the Tennessee Valley Authority will open 9-ft. navigation on the Tennessee River, from the Ohio to Knoxville. In this distance of 650 miles a rise of 500 ft. will be effected by locks in ten dams. Two of the locks are 600 x 110 ft., and the others 360 x 60 ft. Of wharves or landings at several cities, the TVA has built three. Since the construction of the lock in the government dam at Bonneville, on the Columbia River, the old locks at the Cascades are no longer required, and the iron gates have been removed for addition to the war-service scrap pile. The highly controversial project for a dam and power plant in the St. Lawrence, with locks to enable ocean steamers to reach the Great Lakes, is still kept alive, although generally admitted to be for postwar consideration.

Indefinite projects have been proposed for dredging and connecting South American rivers to

provide a system of inland navigation. There are possibilities, but neither commercial nor financial conditions are favorable to such developments. It may be noted that in the great basin of the Amazon River, ocean steamers of 8,000 tons can reach Manaos (Brazil), 1,000 miles from the coast, while those of 3,000 tons can go 1,000 miles further upstream to Iquitos (Peru).

Inland navigation in China is now controlled by a Japanese concern, the Central China Development Co., which operates over some 37,000 miles and is reported as building new links in its system of rivers and canals. In England, the traffic on barge canals is increasing, but an obstacle to through traffic is in the varying sizes of the canals and locks. A plan has been put forward for extend-

ing the Manchester Ship Canal eastward to the Humber River, which discharges into the North Sea at Hull. In Ireland, the severe reductions in railway service have led to the revival of some abandoned canals, using 50-ton barges and tugs.

in 1942 and the 10-year average of 54,572,000 acres. In the main, weather was reasonably favorable to the wheat crop. The loss of planted acreage was considerably less than average and yields well above the average. The yield per acre averaged 16.5 bu. in 1943 compared to 19.8 bu. in 1942 and 13.5 bu. for 1982-41. Acreages harvested, average acre yields, and total production, respectively, were for winter wheat 33,952,000 acres, 15.6 bu., 529,606,000 bu.; durum 2,130,000 acres, 17 bu., 36,204,000 bu.; and other spring wheat 14,472,000 acres, 18.7 bu., 270,488,000 bu. Preliminary statements placed the season avergence.

age price per bushel received by farmers at \$1.329 and the value of production at \$1,111,039,000 versus \$1.098 and \$1,069,982,000 in 1942. The accompanying table lists the leading wheat States in 1943. See INSECT PESTS.

| Windward Islands (St. George's) | 820          | 274,046          |

<sup>a</sup> Includes the islands—Carriacou, etc.—of the southern Grenadines (13 sq. mi.). <sup>b</sup> Includes the islands—Bequia, Canouan, Mayreau Mustique, and Union—of the northern Grenadines (17 sq. mi.).

Chief towns: St. George's (capital), 6,500 inhabitants in 1939; Castries with suburbs, 21,124; Kingstown, 4,269 (1921); Roseau, 9,000.

Production and Trade. The principal products are

arrowroot, cotton, sugar, molasses, rum, copra cocoa, peanuts, cassava, spices, citrus fruits, and vegetables. Trade: Dominica, 1940, imports £114,284, exports £81,153; Grenada, 1939, imports £283,088, exports £310,687; St. Lucia, 1941, imports £282,285, exports £158,636; St. Vincent, 1941, imports £248,036, exports £283,565. In 1940 there were 1,216 miles of highways. 565. In 1940 there were 1,216 miles of highways. Finance. Dominica, 1940, revenue £80,702, ex-

penditure £82,516, public debt £6,000; Grenada,

1939, revenue £158,307, expenditure £173,685, public debt £357,837; St. Lucia, 1940, revenue £103,403, expenditure £115,662, public debt £104,681; St. Vincent, 1941, revenue £126,388, expenditure £111,708, public debt £91,629.

Government. There is one governor for all the four colonies but there is no common legislature and each colony has its own executive and legislature.

and each colony has its own executive and legislative councils. Governor and Commander in Chief, Sir Arthur Grimble (app. Nov. 19, 1941).

WINTHROP COLLECTION. See ART under Art Museums.

WISCONSIN. An east north central State. Area: 56,-154 sq. mi. Population: 3,137,587 (1940 census); 2,967,973 (1943 nonmilitary estimate).

Statistics. Statistical information pertaining to each of the 48 States and the District of Columbia has been assembled in comparative tables which appear in the following articles. Agriculture; Mineral Production; Roads and Streets; Schools; Social Security Board; Taxation; SCHOOLS; SOCIAL SECURITY BOARD; TAXATION; UNIVERSITIES; and VITAL STATISTICS. WOMEN'S AUXILIARIES. See COAST GUARD; SELEC-TIVE SERVICE SYSTEM.

WOMEN'S BUREAU. A bureau in the U.S. Department of Labor created by Congress to "formulate standards and policies which shall promote the welfare of wage-earning women, improve their working conditions, increase their efficiency, and advance their opportunities for profitable employment." Since the outbreak of hostilities the Bureau has channeled its resources and personnel into an investigation of working women's place in the war, with the object of disseminating widely the information secured concerning war occupations in which women may substitute for men, and work standards for their employment. Counseling services on women's employment problems have been made more easily available to employers, trade unions, and Federal and State authorities by the assignment of the various field investigators of the Bureau to regional offices with restricted areas, the 12 regions now covering the entire country. One of these regional representatives is its farm-labor authority.

The War and Navy Departments, the War Production Board, the War Manpower Commission, the Maritime Commission, and other governmental agencies and private organizations have called on the specialized knowledge and records in the possession of the Bureau. Changes in industrial methods, such as job dilution, plus the obvious need for many more women in war production, caused the Bureau to make detailed field studies of occupations and practices in war plants. Following its 1942 surveys of aircraft, artillery ammunition, and other war industries, reports have been published on machine tools, cannon and small arms, and a State-wide survey of old-line plants with war contracts in New Jersey. Recommendations by the Bureau for women's employment in shipbuilding and naval repair, based on its survey of shipyards on the Atlantic and Pacific and Gulf coasts, are in preparation. A similar survey for the steel mills was completed in 1943 and the report is in progress. Data are constantly being compiled on wom-

en's employment in key war industries.
In addition to these surveys, special bulletins recommending standards for working conditions for women have been published. A timely bulletin on part-time employment of women was issued in 1943, giving the Bureau's recommendations for the employment of women unable to take full-time jobs. Factors directly affecting production and often the major cause of absenteeism and high turnover on the part of women workers have been studied by the Bureau in various war-industry areas, for example, shopping and marketing, child care, and other family problems, transportation difficulties, and housing for single women workers.

During the year the Bureau's advice was sought as to the relaxation of State hour laws and other legal standards for women's work. (See STATE LEGISLATION.) At a conference suggested and organized by the Bureau, called by the Secretary of Labor in March, 1943, to discuss the necessity and wisdom of such relaxation of laws, the labor officials from 12 industrial States in the East, and representatives of the War and Navy Departments and other Federal agencies, agreed that exceptions be approved only where temporary modification is shown to be necessary to insure maximum production. The conference went on record as continuing to endorse the best standards as to hours of employment—a maximum 48-hour week, and 8-hour day, 1 day of rest in 7, adequate rest and meal periods, adaptation of hours of work and working conditions to the age and sex of the workers, proper safeguards for health and safety, the same wage rates for women as for men. An example of the Bureau's activity in minimum-wage matters was reflected in the wage orders it helped to draft at the request of State administrators.

The principle of equal pay for women and men has been advocated by the Women's Bureau for many years, and the Bureau is examining the decisions of the National War Labor Board (q.v.) where action has been taken on "equal pay" to determine the effect of Board policy on wage rates for women. The Bureau is working also with unions to determine the practical application of such

decision.

The Bureau's study of the legal status of women in the United States was brought up to date by the issuance of a pamphlet summarizing State legisla-tion in this field that had been passed since 1938, the date of the earlier report.

Special articles on matters of current interest to women workers have been prepared for the monthly periodical of the U.S. Department of Labor, The Labor Information Bulletin. An informative collection of over a thousand photographs has been assembled by the Bureau, through the cooperation of employers, trade periodicals, and others. A number selected as especially good illustrations of wom-

en's jobs in this war period have been printed as a series of five posters (each containing 9 pictures) and are being widely distributed.

WORK PROJECTS ADMINISTRATION (WPA). A U.S. agency under the jurisdiction of the Federal Works Agency, now in liquidation. For final report, see 1943 YEAR BOOK, pp. 758-9. See ART under Discontinuance of Federal Activities; LIBRARY PROG-RESS; MUSIC; PUERTO RICO under History.

WORLD COURT. This agency, having some fifty States as members and drawing jurisdiction from 400-500 treaties, while ready at any time that the nations desired, remained to one side for the fourth year as governments sought to settle their conflicts by other means. The President and the Registrar, who had been driven by the Germans from the seat of the Court in The Hague following the occupation of the Netherlands, continued in office in Switzerland, with the other judges mostly on call in their own countries. Though the Court was thus forced into inaction, it became clear during the year that it was generally accepted as one of the foundation stones of the new world system; Secretary of State Cordell Hull, indeed, specifically raised the question of its adaptation to the new circumstances.

#### WORLD SERIES. See BASEBALL.

WORLD WAR. The military campaigns of the first years of the war are described in the YEAR BOOKS for 1939 and 1940 under EUROPEAN WAR, and in the 1942 and 1943 YEAR BOOKS under WORLD WAR. For the convenience of the reader, a war chronology, 1939-42, follows immediately. (See pp. xiv-xv for 1943 chronology.) Thereafter, the campaigns of 1943 are described.

1939

March 14—German and Hungarian troops invaded Czechoslovakia.

April 6—Prime Minister Chamberlain announced in the House of Commons a Polish-British agreement, bringing into existence a triple alliance-France, Great Britain, and Poland.

April 13—British Government guaranteed borders of Rumania and Greece. Similar assurances were

given by France.

April 28-German note to Poland denounced the 10-year nonaggression treaty of January 26, 1934 between the two countries and requested the return of Danzig as well as an extraterritorial railway and highway connection to East Prussia.

August 23—German-U.S.S.R. nonaggression pact

signed.

September 1-German troops invaded Poland; Danzig joined Germany

September 3-Great Britain declared a state of war existed with Germany.

France declared a state of war existed with Germany.

September 16—Soviet troops invaded Poland. September 28—German-Ü.S.S.R. border friendship treaty signed, resulting in partitioning of

Poland.

Estonian-U.S.S.R. 10-year mutual-assistance pact signed at Moscow: Gave U.S.S.R. bases for aviation and artillery.

October 3—Declaration of Panamá signed. October 5—Latvian-U.S.S.R. 10-year mutual-assistance pact signed at Moscow

October 10—Lithuanian-U.S.S.R. 15-year mutualassistance treaty signed at Moscow.

October 19-Anglo-French-Turkish 15-year mu-

tual-assistance pact signed at Ankara. November 1—Polish Corridor, Posen, and Upper

Silesia annexed by Germany.

November 3—U.S.S.R. incorporated Polish West-

ern Ukraine and Western White Russia.

November 4-United States Neutrality Act of 1939 approved.

November 21-German-Slovak treaty signed at Berlin, ceding to Slovakia 225 square miles of territory annexed by Poland in 1920, 1924, and 1938.

November 30—Soviet troops invaded Finland. 1940

March 12—Soviet-Finnish peace treaty and protocol signed at Moscow.

April 8—Great Britain and France announced that three areas of Norwegian waters had been mined in the attempt to prevent shipment of Scandinavian ore to Germany.

April 9—German troops invaded Denmark.

Germany attacked Norway.

April 17—Secretary of State Hull issued a formal statement declaring any change in status quo "would be prejudicial to the cause of stability, peace, and security" in the entire Pacific Area.

May 9-10—Germany invaded Belgium, Luxem-

bourg, and the Netherlands.

May 10-Winston Churchill became Prime Minister of Great Britain following resignation of Neville Chamberlain.

British occupation of Iceland announced in London.

May 15—The Netherlands Army surrendered.

May 19—Chancellor Hitler issued a proclamation decreeing the reincorporation into the Reich of Eupen, Malmédy, and Moresnet.

May 28—Belgian Army under King Leopold sur-

rendered.

June 9-Norwegian high command ordered army to cease hostilities at midnight.

June 10-Italy declared war on Great Britain and France

June 14—German troops entered Paris.

June 15—Soviet troops marched into Lithuania.

June 17—U.S.S.R. announced Estonia and Latvia had agreed to free passage of Soviet troops and to formation of new governments.

June 22—Franco-German armistice signed.

June 24—Franco-Italian armistice signed. June 27—Rumania agreed to cede Bessarabia to

U.S.S.R.

June 28—British Government recognized Gen. Charles de Gaulle as leader of group to maintain French resistance.

July 3—British sank or seized major part of French fleet.

July 5-French Government of Marshal Pétain broke off diplomatic relations with Great Britain as result of British attack on French warships at Oran.

July 18—British Prime Minister announced terms

of a temporary agreement for stoppage of war supplies to China through Burma and Hong Kong.

August 25-Estonia, Latvia, and Lithuania ratified U.S.S.R. incorporation.

September 2-United States-British notes on lease of British bases in return for 50 United States de-

September 7-Bulgarian-Rumanian agreement ceding the Dobruja to Bulgaria signed at Craiova, Bulgaria.

September 22-Japanese-French agreement regarding concessions in Indo-China to Japan.

September 27—German-Italian-Japanese 10-year military-economic alliance pact signed at Berlin.

October 28—Italy attacked Greece prior to expiration of ultimatum, creating state of war.

November 4—Spanish incorporation of international zone of Tangier.

November 20—Hungary signed protocol of adherence to Axis tripartite pact at Vienna. November 23-Rumania signed protocol of ad-

herence to Axis tripartite pact at Vienna.

November 24—Slovakia signed protocol of ad-

herence to Axis tripartite pact at Berlin.

November 26—Governor-General of Belgian Congo declared state of war with Italy.

November 30—Japanese peace treaty signed with the Wang Ching-wei regime at Nanking, China.

December 6—Japanese-Thai pact of amity signed. Hungarian-Yugoslav treaty of December 12friendship signed.

1941

January 5-British captured Bardia, Libya, and 25,000 Italians.

January 19-Axis began mass air attacks on Malta.

January 20-President Roosevelt was inaugurated for third term.

January 22—British captured Tobruk and 14,000

Italians. January 25—Premier Antonescu crushed Iron Guard revolt in Rumania.

February 6—Bengasi, Cyrenaica, fell to British. February 9—Vice Adm. Jean François Darlan became Vice Premier and Foreign Minister of Vichy France.

February 17—Bulgar-Turk nonaggression pact signed.

February 26—South Africans took Mogadiscio, capital of Italian Somaliland.

March 1—Bulgaria admitted German troops and signed Axis tripartite alliance.

March 11-President Roosevelt signed Lendlease Bill.

March 24-Turkey and U.S.S.R. pledged neutrality in case either was attacked by a third power.

March 25—Prince Paul's Yugoslav regime adhered to Axis military alliance. Was overthrown by anti-Nazi coup March 27.

March 28—British Mediterranean fleet sank three Italian cruisers and two destroyers off Cape Mata-

March 30-U.S. Government seized Axis ships in American ports to prevent sabotage.

April 1-British captured Asmara, capital of Eritrea.

April 3—Anti-British coup in Iraq placed Rashid Ali Al-Gailani and his pro-Nazi supporters in

April 6-Germans invaded Greece and Yugoslavia. South African troops entered Addis Ababa, Ethiopian capital.

April 9-United States undertook to protect Greenland for duration of war.

April 12—Axis troops recaptured Bardia, Libya.

April 13-Japan and Russia signed five-year neutrality pact.

April 17-Yugoslav army surrendered to Germans.

April 27—German forces entered Athens.

May 2-31—British troops ousted pro-Axis regime in Iraq.

May 6—Joseph Stalin replaced V. M. Molotov as Soviet Premier.

May 10-Rudolf Hess landed by parachute in Scotland carrying Hitler's offer of peace to British Government.

May 20—Italian Viceroy surrendered in Ethiopia with 38,000 men.

May 20-June 1-Germans captured Crete by air invasion.

May 24—British battle cruiser Hood was sunk by German battleship Bismarck, which was sunk in turn by British on May 27.

May 27-President Roosevelt proclaimed an unlimited national emergency.

June 8-July 9-British and Free French forces occupied Syria and Lebanon.

June 18-German-Turkish friendship and neutrality pact was signed.

June 22—Germany began surprise invasion of Russia.

June 26-27-Finland and Hungary joined Germany against Russia.

July 7-U.S. forces began joint occupation of Iceland with the British, who landed May 10, 1940.

July 12-British-Russian mutual assistance pact signed.

July 21—Stalin became Commander in Chief of Red Army.

July 26—Vichy Government signed agreement giving Japan military control over French Indo-China.

August 6—Germans captured Smolensk.

August 12—Britain and Russia agreed to assist Turkey if that country was attacked by Germany. August 14—President Roosevelt and Prime Minister Churchill issued Atlantic Declaration (Char-

ter) after meeting on warship off Newfoundland. August 21—Russians destroyed the giant Dnieper Dam to prevent it from falling into German hands. August 25-British and Russian forces began oc-

cupation of Iran. September 11—President Roosevelt ordered U.S. Navy to shoot on sight against Axis raiders in "de-

fensive waters. September 27—Reinhard Heydrich, appointed Acting Reich Protector of Bohemia and Moravia, began reign of terror against the Czechs.

October 1-United States signed lend-lease agreement with Brazil.

October 3—Hitler announced that "Russia is already broken."

October 10—Germans took Taganrog from Russians. On October 14 Russians evacuated Vyazma.

October 18—Gen. Hideki Tojo formed Tokyo
Cabinet pledged to "strong policy" towards United

States and Britain. October 20-Soviet Government moved to Kuiby-

shev as German drive neared Moscow. Kharkov fell on October 24.

October 30-U.S. destroyer Reuben James was sunk by Axis submarine on convoy duty west of

November 17-U. S. Neutrality Act was amended to permit arming of merchant vessels and visits to belligerent ports.

November 18-British Eighth Army began new offensive in Libva.

November 25—Anti-Comintern Pact was renewed

in Berlin by thirteen Axis and pro-Axis powers. December 3—Finns recaptured Hango naval base from Russians.

December 6--Britain declared war on Finland,

Rumania, and Hungary.

December 7—Japanese surprise air attack on Pearl Harbor extended the war to the entire Pacific area. December 7–20—26 nations declared war on Japan (see table on p.731).

December 8-Japanese took over International Settlement at Shanghai and occupied Thailand with Thai Government's consent.

December 9-Japanese sank British battleship Prince of Wales and battle cruiser Repulse near Singapore.

December 10—Japanese invasion of Philippines began.

December 11-Germany and Italy declared war on United States.

December 12—Japanese captured Guam.
December 16—Adm. Chester W. Nimitz replaced Adm. Husband E. Kimmel as Commander in Chief of U.S. Pacific Fleet.

December 21—Hitler assumed supreme command of German Army following reverses in Russia.

December 22—Churchill arrived in Washington; joint Anglo-American war machinery was estab-lished in ensuing conferences. Wake Island surrendered after heroic defense by U.S. Marines.

December 24—British recaptured Bengasi in Libya.

December 25—British announced fall of Hong

December 31—Red Army's first winter offensive gained ground on all fronts.

#### 1942

January 1-United Nations Declaration signed in Washington.

January 2—Japanese captured Manila and Cavite naval base.

January 5-Chinese won third battle of Changsha, claiming 52,000 Japanese casualties.

January 11—Japanese invasion of Netherlands East Indies began. On January 15 Burma invasion was launched.

January 15-28—American Foreign Ministers adopted anti-Axis program at Rio de Janeiro Conference.

January 16-U.S. War Production Board estab-

January 21—Field Marshal Erwin Rommel launched new offensive against British in Libya.

January 23-28—Allied ships and planes sank or damaged 38 ships of Japanese invasion fleet in Straits of Macassar.

Japanese landed in New Guinea and New Britain.

January 26-U.S. expeditionary force landed in Northern Ireland.

February 7—Japanese captured Amboina, N.E.I. naval base.

February 9-French liner Normandie was gutted and overturned by fire at New York City pier.

February 15—Singapore capitulated to Japanese.
February 23—Red Army entered Kharkov and launched new offensive in central Russian front. February 27-30-Japanese defeated Allied naval

forces in Java Sea; began land invasion of Java.

March 6—Batavia, Java, captured by Japanese.

On March 9 they announced surrender of 98,000

March 8-British evacuated Rangoon.

March 13—Japanese landed in British Solomon Islands.

Murch 17—Gen. Douglas MacArthur arrived in

Australia from Philippines to assume command of Allied forces in Southwestern Pacific.

March 26—Japanese captured Akyab in western Burma

April 5-10-Japanese aircraft attacked Colombo, Ceylon, and ports in Madras Province of India; sank two British cruisers and aircraft carrier Hermes in Bay of Bengal.

April 9-35,000 U.S. and Filipino troops on Bataan Peninsula surrendered after 98-day siege.

April 18—Tokyo and other Japanese cities were bombed by U.S. planes.

April 30-May 1—Japanese captured Mandalay and

Lashio, terminus of Burma Road.

May 4-8—U.S. task force turned back strong Japanese thrust toward Australia in Battle of Coral

May 5—British attacked and captured Vichy French naval base of Diego Suarez in Madagascar to forestall Japanese landing.

May 11-24—Germans drove Russians from Kerch Peninsula in eastern Crimea.

26—Twenty-year Anglo-Russian alliance signed.

May 30—R.A.F. struck Cologne in one of a series of heavy attacks on Rhineland cities.

June 4-7-Japanese fleets were repulsed with heavy losses in Battle of Midway.

June 18-Prime Minister Churchill and staff arrived in Washington for further Anglo-American conferences.

June 21—Marshal Rommel captured Tobruk with 25,000 British troops and drove eastward into Egypt until halted at El Alamein on July 1.

June 25-Maj. Gen. Dwight D. Eisenhower arrived in London to assume command of U.S. forces in European theater.

July 2—Germans captured Sevastopol after 245-

day siege.

July 4—American air units participated in their first bombing raid upon Axis Europe.

July 7—German summer offensive in Russia made further progress with crossing of the Don River.

July 20—Russians admitted loss of Voroshilov-grad. Their withdrawal from Rostov was announced July 28.

August 7-U.S. Marines checked Japanese advance in Southwest Pacific by landings on Tulagi and Guadalcanal in the British Solomon Islands.

August 9—British arrested Mohandas K. Gandhi and 200 of his followers after Gandhi started a civil disobedience campaign to drive British from India.

Two American and one Australian heavy cruisers were lost in night battle off Tulagi.

Germans took the Maikop oil fields in the Russian Caucasus.

August 17-Flying Fortresses attacked Rouen Dunkirk, and Cherbourg in first all-American raid on Axis bases in Europe.

August 18—Gen. Sir Harold Alexander replaced Gen. Sir Claude Auchinleck as British Commander in Chief in the Middle East.

August 19-Canadian, British, and U.S. forces made a large-scale commando raid on Dieppe, France; half of the attacking force was lost.

September 6-British Eighth Army under Gen. Sir Bernard Montgomery repulsed Rommel's effort to break the El Alamein defense line in Egypt.

September 7—Germans began their frontal attack upon Stalingrad.

September 12—Russians were driven from their Black Sea naval base at Novorossiisk.

September 15-U.S. aircraft carrier Wasp was lost in Southwest Pacific.

October 3—U.S. Army announced occupation of Andreanof Islands in the Aleutians.

October 11—U.S. naval task force repulsed Japanese effort to reinforce their Guadalcanal garrison in first of a series of heavy night engagements. Another night sea battle, very costly to the Japanese, followed on October 26.

October 24—R.A.F. bombers struck Milan in series of heavy daylight raids on cities of N. Italy.

November 2—Marshal Rommel's forces began retreat from Egypt after their defeat in ten-day battle of El Alamein.

November 5—Vichy French forces capitulated to British in Madagascar.

November 8—Anglo-American expeditionary forces landed in Algeria and French Morocco. On November 10 Adm. François Darlan ordered end of French resistance and threw in his lot with the Allies.

November 11—Germans occupied southern France. November 13-15—U.S. naval forces destroyed 28 Japanese ships and lost two cruisers and seven destroyers, with two admirals, in three-day battle off the Solomons.

November 17—General MacArthur landed in New Guinea to direct Allied offensive against Buna and Gona.

November 20—British recaptured Bengasi for third time in drive that ended Axis control of Libya.

November 22—Russians announced beginning of counter-offensive against German forces besieging Stalingrad.

November 27—Greater part of French fleet at Toulon was scuttled or burned by crews to prevent capture by Germans.

December 1—U.S. naval forces smashed final Japanese effort to reinforce their weakened garrison on Guadalcanal.

December 4-5—German counter-offensive in Tunisia drove Allies from Tebourba and Djedeida.

December 19—British and Indian forces began drive into Arakan peninsula of western Burma.

December 24—Admiral Darlan was assassinated in

December 25—Russians launched counter-offensive against Germans in the Nalchik area of the Caucasus.

December 30—Russians encircled 22 German and Rumanian divisions before Stalingrad and recaptured Kotelnikov.

For the campaigns of 1943, see below.

### THE RUSSIAN FRONT

The Tide Turned at Stalingrad. It is increasingly apparent that Nov. 19, 1942, was the turning point of the Second World War. Two Russian offensives began on that day which eventually encircled and captured the great German army which was besieging Stalingrad. For a month the Germans were able to maintain contact with the West, through a constantly narrowing salient, but on Jan. 1, 1943, 22 divisions were tightly encircled. By that time the Russian winter drive had already netted 312,000 enemy troops killed or captured.

On January 17 the survivors at Stalingrad were estimated at 80,000 out of a probable 220,000 entrapped. But on the 31st, when Field Marshal Gen. Frederick von Paulus and 16 other generals surrendered, the estimate of Germans eliminated in the Stalingrad trap rose to 330,000 men, most of

whom were killed.

This disaster was an incredible event to Hitler. Posing as the supreme German general he had driven his armies through the depths of Southern Russia to the Volga. There they had destroyed a

great modern city, with artillery fire and thousands of bombs; they had even occupied much of the ruins repeatedly only to be driven out time and again by a Russian garrison which had literally destroyed its bridges over the Volga to the rear. Even when his defeat was already accomplished Hitler announced that Stalingrad was practically taken. His armies were indeed beyond Stalingrad in the Caucasus far to the South. They had seized the small Maikop oil fields, were very close to the larger Grozny wells, and just beyond lay the greatest oil wealth of the Soviet Union. Great success was so near that Der Fuehrer thought it was achieved.

Warned by the terrible rigors of the Russian winter of 1941–42, and by their inability to destroy the Russian armies, the Germans had compromised with destiny enough to carve out for themselves the richest part of European Russia, almost exactly the same vast realm which they had seized by the Treaty of Brest-Litovsk on Mar. 3, 1918. That forgotten treaty which, in Churchill's words, had stripped Russia of all the conquests of Peter and Catherine "by one sabre-cut across the map of Europe from Helsingfors to Batum and Baku," was about to be made good in 1942 when the Russians unleashed their second winter offensive.

The Russian Winter Campaign. The Nazis were substantially where Stalin had expected them to be, and he was prepared to deal with them, partly by American-British lend-lease aid which may have supplied the margin of victory, but more largely by the herculean transfer and production of Soviet war factories. Throughout the long summer of retreat in the South the Russians had clung to the pivot at Voronezh. Finally, on Dec. 20, 1942, Russian forces poured through the pivot and had soon opened a wide breach on the long German flank. On January 2 they captured and wiped out the entire garrison of Velikiye Luki, a powerful bastion which formed with Rzhev and Vyazma a very strong triangle. The Red army had been in the center of the triangle all summer, but unable to take its strong points.

take its strong points.

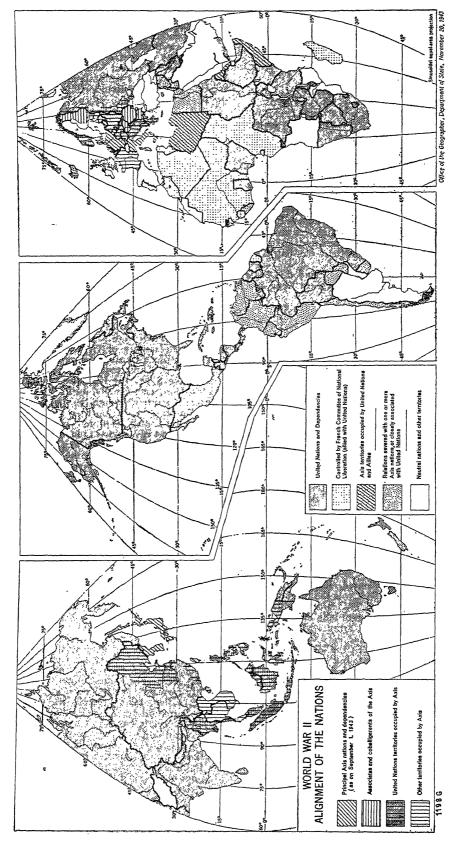

On January 10 eight Russian armies or groups of armies were on the move, and the Germans were everywhere on the defensive. By this time the Russians were within 60 miles of Rostov from the north and their troops had driven down to Georgievsk in the Caucasus, 112 miles in 18 days. Goehbels complained of the effectiveness of the Russian total war system and as gloom spread in Germany he decided to exploit it by three days of national mourning, February 4–7, to mark the end

of German resistance at Stalingrad.

On February 5 the Germans in the Western Caucasus were cut off from Rostov by a Russian drive to the Black Sea. Some 200,000 Germans were cornered, except for the exit to the Crimea over the narrow Kerch peninsula. Coming up from the South the Red Army soon cleared the South bank of the Don at Rostov. North of that city Russian forces on skis and motorized sleds pushed steadily forward over the deep snow fields of the Donets valley, taking Kursk, the northern pivot of the German defense line on the 8th. This citadel had been a main bastion of Germany's winter line all through the preceding year.

The next day Belgorod fell and on February 16

The next day Belgorod fell and on February 16 Kharkov was taken, after being in German hands for 15 months. Eight railroads radiated from this king-pin of the Nazi line. Rostov was occupied the same day, along with Krasnodar in the West Caucasus. Krasnograd and Pavlograd, two important rail junctions south of Kharkov, were reclaimed on

# NATIONS AT WAR AND THOSE WHICH HAD SEVERED DIPLOMATIC RELATIONS AS OF DEC. 31, 1943

(Belligerents and Dates of Outbreak of War Are Shown in Bold-face. Nonbelligerents and Dates of Severance of Diplomatic or Consular Relations Are Shown in Light-faced. Blank Space Indicates that no Diplomatic or Consular Relations Existed at the Outbreak of War.)

In addition to the countries listed here, the Axis Powers included the puppet governments of Burma, Croatia, Manchukuo, Slovakia, and the Nanking regime in China. Denmark, which was occupied by German armed forces on Apr. 9, 1940, severed diplomatic relations with Belgium July 15, 1940, Netherlands May 10, 1940, Norway July 15, 1940, and the U.S.S.R. June 26, 1941.

U.S.S.K. June 20, 1941.

The United Nations Declaration of Jan. 1, 1942, was signed by 32 belligerent governments and adhered to by the Fighting French National Committee and representatives of unofficial groups of Austrians, Danes, and other nationalities seeking freedom from Axis domination.

The Badoglio Government of Italy following an armistice with the Allied Powers declared war on Germany Oct. 13, 1943.

Japan's declaration of war, Dec. 7, 1941, against "the British

the 20th but by the 27th the spring thaws were beginning at the southern end of the long battle line.

Shifting to the north the Russian high command started a new drive south of Lake Ilmen, on March I, and two days later Rzhev, a central front stronghold, was reclaimed with much booty. On the 6th, the Soviet forces captured Gzhetsk, the "hedgehog" nearest to Moscow, 100 miles west. By defending strongholds with fortified spines radiating out in all directions the Germans had created a problem which the Russians could not solve in

Empire," presumably included India and the Dominions. On Dec. 16, 1941, the Czechoslovak Government declared war on all countries at war with Great Britain, the United States and the Soviet Union; it announced that a state of war was considered to have existed with Germany and Hungary since the dates of their invasion of Czechoslovak territory.

and the Soviet Chind; tannothed that a state of war was considered to have existed with Germany and Hungary since the dates of their invasion of Czechoslovak territory.

The Fighting French National Committee, headed by Gen. Charles de Gaulle, and the Darlan-Giraud regime in North Africa (established Nov. 12, 1942) were merged on June 3, 1943, under the title of the French Committee of National Liberation.

Mexico's declaration of a state of war was announced on June 1, 1942.

June 1, 1942.

A The nonbelligerents listed below displayed their solidarity with the United Nations by suspending diplomatic or consular relations with Axis Powers, or allowing them to lapse.

the preceding winter. Now, however, they had amassed their unsurpassed artillery and perfected tactics which overcame the hedgehog strongholds. Growing air power also aided them. Vyazma, an important town on the Moscow railway to Smolensk, was captured March 12. Progress continued until the Russians were less than 50 miles from Smolensk at the end of March.

German Counter Offensive Recovers Kharkov. Meanwhile a serious reverse befell them in the south. There the Russian lines of communication and forces had been stretched too thin. The Axis had

460 divisions in Europe to 335 on the Allied side and of the latter at least 50 were in Britain. Heavy German counter-attacks began in the south at the end of February, supported by a force of 375,000 men. In the next ten days the Russians were thrown back 80 miles on the Kharkov-Dnieper-Donets front. They barely managed to prevent the encirclement of Kharkov but lost it to frontal assault on March 14. On the 22nd the Germans re-occupied Belgorod, 50 miles north of Kharkov, before the advancing thaws stopped all major activity in Russia. The Russian reverses sharpened the Russian cry for a second Allied front in West-ern Europe, a demand which was repeated forcibly on June 22, the second anniversary of the German invasion.

The Russians were not ungrateful for our extensive lend-lease aid-delivered to the Arctic north after grueling battles with submarines, planes, and bitter cold—as our Ambassador Adplanes, and bitter cold—as our Ambassador Admiral Standley seems to have thought in chiding them for not saying more about it. By spring our supplies were glutting the southern artery to Russia through Iran. Essentially landlocked, the Russians did not visualize well the immensity of the effort we were making on the sea and in the air over Germany. Absorbed in the interminable shock of battle with Germans, nothing seemed to them to balance the fact that on the Allied side they were paying the cost of victory in terms of blood.

German Summer Offensive at Kursk. During June there were heavy air raids along the Russian front. On the 12th the Germans aimed two mass air raids at Gorki on the upper Volga. The Russians countered with heavy blows on Nazi airdromes and communications, one 700-plane night raid being staged. Each side was trying to break up the other's concentrations for an offensive.

On July 7 the usual German summer offensive

began, but only against the relatively small Kursk salient. In 1941 they had attacked from the Baltic to the Black Sea. In 1942 they attacked on the southern half of the line. In 1943 they could attempt only a local offensive.

It was backed with great masses of armor and precipitated the greatest tank battle to date. The Germans gained a wedge on the Belgorod front and added another ten divisions to the half million men invested in the battle. This giant blitz encountered not only Russian tanks but the splendid Russian artillery planted in hedgehog defenses to give cross fire. At the end of three days the Russians claimed 2,036 tanks destroyed and 904 planes. At the end of the first week German assaults were diminishing along the 165-mile front and by July 18 the Russians had regained all the territory yielded to the German attack. Apparently intended only to pinch off the Kursk salient, this ten-day fiasco had not even served successfully as a holding offensive.

The Russian Orel Campaign. On July 16 the Russians seized the initiative around the Orel bulge into their lines to the north of Kursk, after a special visit to that front by Marshal Stalin, and with the battle cry "Westward!" in their throats and painted on tanks and trucks the Reds were soon rapidly reducing the last German spring board against Moscow. For many days the Russians recovered 30 to 100 populated places daily until August 5 when both Orel and Belgorod were taken. German retreat roads were piled with smashed tanks, burning tanks, and other war ma-terial. The Russian army had demonstrated its organic superiority over the Germans, in methods, skill, and human qualities. Its swift mobile tactics often unnerved the inventors of blitzkrieg war-

Sweeping Russian Advances. On August 3 the Germans suffered a second offensive defeat along the Mius river and by the 8th the Russians were starting a pincer movement on Kharkov, advancing on a 300-mile front. On the 14th a third offensive was opened 80 miles north of Bryansk backed by the heaviest concentration of artillery assembled in any war. On the 21st the Russians had advance d 100 miles on the Kharkov front, but this advance was slowed by the necessity of laying new broad gauge railroad ties, to replace the ones sawed off by the Germans. German mines were also so numerous that the Germans were thought to be making more mines than shells. All towns were full of booby traps. Moscow estimated, nevertheless, that a million Germans had been killed or wounded in the six weeks since July 5.

The blackened ruins of Kharkov were again recovered on August 23 and a deep break-through made on the Donets river front south of Izyum. Taganrog, the Nazis' southern anchor, was stormed on the 31st. Some 35,000 Germans were killed

and 5,000 captured.

September was a month of great advances for the Russians. On the 1st they broke through the German lines on two wide fronts in the Smolensk region and in the south the Germans were in headlong retreat toward Stalino. From 300 to 400 populated places were recovered daily. Stalino was captured on the 9th and the Germans cleared out of the Donets basin. Russian spear heads were within 60 miles of the Dnieper River, virtually

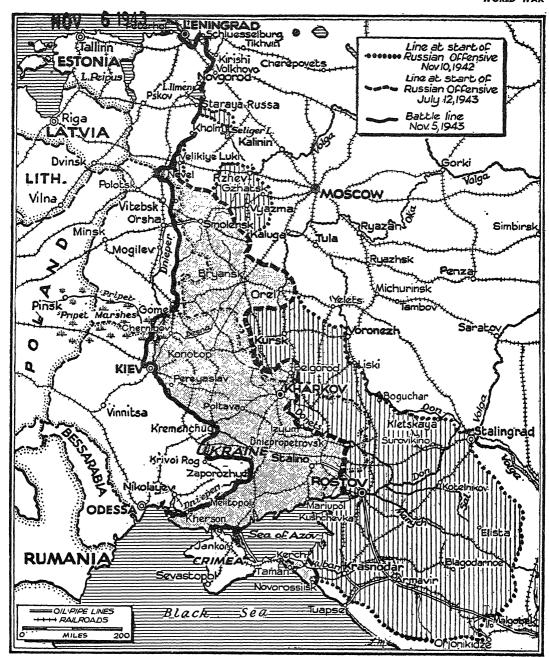

splitting the Germans' central army.

Bakhmach, key to German communications in the North Ukraine, fell on the 10th and Mariupol on the Sea of Azov. Bryansk and its twin city Bezhitsa were taken on the 14th and Novorossiisk in the Caucasus on the 16th. On the 19th the Red army had one of its greatest days, advancing on all fronts and taking 1,200 villages. Stalin issued three orders of the day announcing victories. For several days 1,100 places were regained daily. Poltava fell on the 24th and Smolensk the next day. The Dnieper was crossed repeatedly near Kiev on the 28th as the last German stronghold in the Kuban fell.

Battle for Kiev. As October opened, the Red armies had generally reached the mid sections of the great Dnieper River. They stood firmly on the eastern bank, but usually the opposite shore was higher, giving the Germans a distinct advantage. At Kiev the Russians looked up 600-foot cliffs on the German side. It was necessary to attack the city by a pincer movement from considerable distances north and south. The width of the river varied from 100 feet to 4,000, but it was crossed in early October by hardy Russian men who took every risk to get over, and many other crossings followed.

In the Vitebsk area, 300 miles due north of Kiev, the Russians pressed toward Vitebsk from the south and captured Nevel, a railway center to the north, opening up access to the Baltic States. Cold autumn rains changed roads into quagmires, yet the Russian troops in White Russia took 460 towns, including Cherikov, on October 2 and advanced toward Comel, Mogilev, and Vitebsk.

Throughout these months Moscow celebrated the capture of important points with salvos from 124 guns. On October 24 they boomed for the capture of Melitopol, a city near the Sea of Azov which commanded the approaches to the Crimea. The city was taken after a savage struggle from

# RED ARMY GAINS FROM NOV. 10, 1942, TO NOV. 5, 1943

The territory shown in striping was rewon between the beginning of the counter-offensive at Stalingrad and July 12, 1943, when the Russians launched their great summer offensive. Subsequent gains are indicated by heavy shading.

house to house which lasted 11 days and entailed the killing of 20,000 Germans. On this occasion the thunder of the celebrating cannon was heard by Secretary Hull and the other delegates to the Moscow conference. Zaporozhye, at the eastern end of the great Dnieper bend, fell on October 14, and Pyatikhatka, cutting the vital Dniepropetrovsk-Znamenka railroad, on the 20th. The great dam and the new industrial center at Dniepropetrovsk were recovered on the 25th, much more damaged

than the Russians had left them. The Russians had themselves put the great hydroelectric plant out of commission when they retreated, but by strategic damage which could be repaired.

The systematic demolition of the cities of the

The systematic demolition of the cities of the Ukraine as the Germans withdrew spurred the Russians to fight their hardest in order to deprive the Germans of the necessary time to destroy. At the best they found that new porcelain delayedaction mines, which could not be detected by in-

struments, continued to explode after towns were captured. Nevertheless, Kiev was recovered on November 6 relatively undamaged as compared with demolished Kharkov, though only 65,000 of the city's former 900,000 people crept back to the city and out of its cellars, emaciated skeletons in rags. Some of those surviving presented evidence of mass slaughter and burning of scores of thousands of Jews and Russians. The Russians feared that with all the speed they could muster a third of the Ukraine's 40,000,000 people would be gone before the area was recovered. The destruction of people and the means of livelihood was so grave over an enormous area of European Russia that only a rising industrial colossus and a prolific people could hope to recover in measurable time from the damage done.

Krivoi Rog Held. At the end of October a rapid advance of 60 miles by the Russians from the north arc of the Dnieper bend put them far below the river and close to Krivoi Rog, great iron center which had a prewar population of 200,000. Further progress would entrap large forces, a danger so real as to lead the German official communiqué to use such terms as "dangerous enemy break through" and to invent the famous phrase "disengaging movements." By October 29 the German G.H.Q. in South Russia was moved back to

Odessa.

Spectacular Russian advances proceeded for several days, bringing the Russians to the Perekop Isthmus into the Crimea on November 1 and imperling 40 German divisions along the lower reaches of the Dnieper. There was talk in London that the Germans might have to sue for peace. However, the Krivoi Rog salient was contained and the vital rail junction at Apostolovo, 25 miles to the south, was protected, with its three rail lines over which the Germans in the Dnieper bend could retreat when necessary. Then, after the fall of Kiev, the Russians expanded a broad bulge to the west which was even more dangerous to the Germans, since its southward extension would throw the Germans out of Southern Russia entirely and back into Rumania. In the meantime, the Russian push along the Black Sea had brought them to Kherson at the mouth of the Dnieper, midway between Perekon and Odessa.

tween Perekop and Odessa.

All-out War. A special Russian Communiqué, on November 4, claimed 2,700,000 German casualties since July 5 and the recapture of 135,135 square miles during the summer campaign, raising the total ground recovered since Stalingrad to 335,000 square miles. The whole Donbas region was liberated, "the most important coal and iron district of our country," and the majority of the rail lines linking the center of Russia to the south had been recovered. In addition to the Dnieper line three other strongly fortified lines had been smashed, on the northern Donets, Desna, and Sozh rivers. The captured material listed included 3,600,000 mines, 6,800 guns, and 7,759,000 shells. Further evidence of Russia's tremendous war effort was supplied by the U.S. War Production Board's chairman, Donald M. Nelson, who returned from Russia saying: "I did not know what all-out war was until I saw the all-out war Russia is waging."

Butle of the Kiev Bulge. In pursuance of their fluid strategy which called for pressure on all fronts, ready to exploit areas where resistance was weak, the Russians pushed on beyond Kiev, taking Fas-

tov, an important rail junction, on November 7, and Zhitomer on the 13th, only 67 miles from the

old Polish border. This point controlled the only good railroad connecting the German forces in the north and south and its loss was so vital that the Germans were spurred to concentrate against the spreading Kiev bulge and on November 18 they recovered Zhitomer. This success initiated a sustained effort to punch through with an enormous concentration of armor, similar to the attempted offensive at Kursk in July. The Russian defense tactics were also the same: formidable mine barriers backed with tremendous concentrations of artillery, sighted carefully on the German gun positions, with the Russian tanks held back in the deep defensive zone. These tactics again gripped the German armored fist and prevented it from breaking through, though some ground was yielded slowly as the struggle swayed back and forth until the end of the year in the most furious fighting since Stalingrad. Intrepid scouting and excellent staff work also continued to serve the Russians well.

Lines Stiffened for Winter Campaign. Meanwhile Russian pincers steadily tightened around Gomel, 135 miles north of Kiev, until it was taken and considerable progress made on the road to Minsk. New Russian advances were also recorded in the Krivoi Rog sector and a bridgehead was made good on the Crimean side of the Kerch straits. The advance north of Gomel was so rapid that the Germans abandoned large stores of equipment. In the whole of Central and South Russia they had been pushed out of the large cities and other winter positions and had no desirable places to which to retreat. As delayed snows and freezing weather came to the southern front in early December the German prospects for a third winter in Russia were not bright. Yet they had conducted for more than a year a great retreat, without disaster after Stalingrad. The Germans had also blocked the apparent Russian plan to break the Wehrmacht into three great segments by taking the offensive against the Kiev bulge and by holding the Russian drive from Nevel toward the Baltic. Their center was guarded by the Pripet Marshes, a vast area of forests filled with many swamps, through which only small bodies of men could maneuver.

As the Tehran declaration by President Roosevelt, Premier Stalin, and Prime Minister Churchill warned them that "no power on earth can prevent our destroying the German armies by land, their U-boats by sea, and their war plants from the air," the Germans in Russia suffered from two fatal handicaps—inferiority in the air and lesser numbers. The German necessity to defend all Europe by air left the Russian air force, long trained to act as a tactical arm for the armies, increasing scope. And while German reserves dwindled, due partly to the evaporation of satellite allies—Rumanian, Hungarian, and Spanish—the Russians maintained a strong strategic reserve, which could support any section of the long front. Yet the Germans had raised many new divisions and stood ready to meet the promised assault on Fortress Europa "from the East, the South, and the West."

In the middle of December the Germans increased their pressure on the Kiev bulge, pushing it back within 55 miles of the Ukrainian capital, but the Russians proceeded calmly with a new of tensive south of Kiev, across the northern arm of the Dnieper bend, taking Znamenka on December 9 near the important city of Smela, through which three rail lines passed. A few days later Cherkasy; the last important German stronghold on the middle Dnieper River fell, giving the Red Army a firm grip on the great river, down to the bend.

Bultic Offensive. Action then switched to the north. A big Russian offensive on the Nevel front pushed the Germans back 20 miles in the five days after December 15. By Christmas, 600 populated places had been recovered and the strong German bastion, Vitebsk, was only 11 miles in front of the Red Army. This distance was shortened in succeeding days and steel arms were driven around Vitebsk until an escape corridor only 10 miles wide remained open on December 31. Both the highway and railway to Polotsk had been cut. This town, 40 miles west of Vitebsk, was a next objective of General Bagramian's First Baltic Army, from which point the trunk railway south from Leningrad could be gravely threatened.

It was the obvious purpose of this army to cut through to Riga and entrap or force the retirement of all the Germans in the Leningrad area, an objective which seemed feasible as the year

ended.

Break Through in the South. On December 26, the Kiev bulge flamed again, this time from the Russian side. For six weeks the Germans had been slowly pressing this bulge back, at heavy cost of tanks and trained reserves. Then in six days they lost the fruit of their great effort, very much as they did in the abortive Kursk offensive which opened the summer campaigns. General Vatutin's

First Ukrainian Army struck now with repaired communications and accumulated supplies behind it. A 50-mile breach was rapidly pushed west toward Zhitomer which was again recaptured on the 31st. A few days later as the Russian drive neared the old Polish border on a still broader front, it halted and struck south toward the Rumanian border.

Observers wondered why the Germans tarried in the bulk of the great Dnieper bend. The Russians quickly recovered Berdichev and were striking toward Zhmerinka from which point they could cut the last main rail exit from the bend. After Stalingrad the Germans had managed to avoid encirclement. Now a greater Stalingrad seemed in the making, one aided by a powerful Russian army inside the Dnieper bend pushing against the Germans from the east.

The failure of the Germans to shorten their line and thus increase their reserves appeared to be due to political reasons, the fear that panic in Rumania would spread to Bulgaria and Hungary, thus crumbling the whole Balkan front. Cries for peace from these satellite allies were becoming louder with each day's advance of the Russian armies.

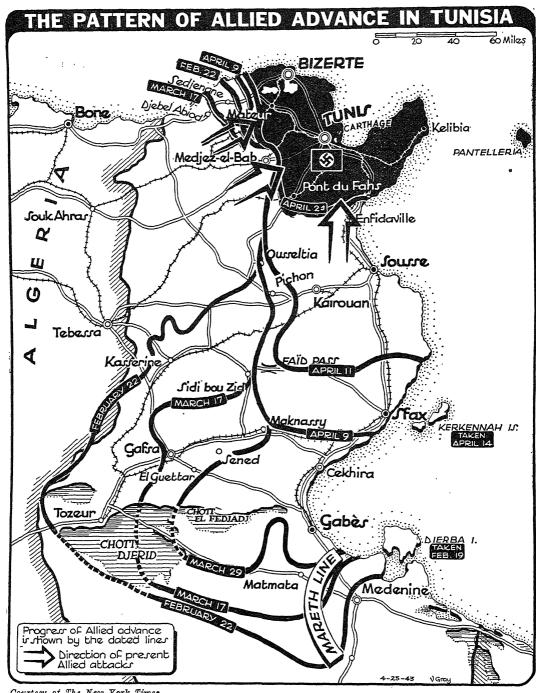

In the north, the Germans appeared to linger at Leningrad for the same reason, to avoid Finland's exit from the war. The deep reluctance of

Courtesy of The New York Times

the Nazis to see their empire crumble, or to give up a square mile that might be held, had stretched their eastern front until 190 divisions were pinned down on it, as that great dread of all Germans, a two-front war, was about to materialize.

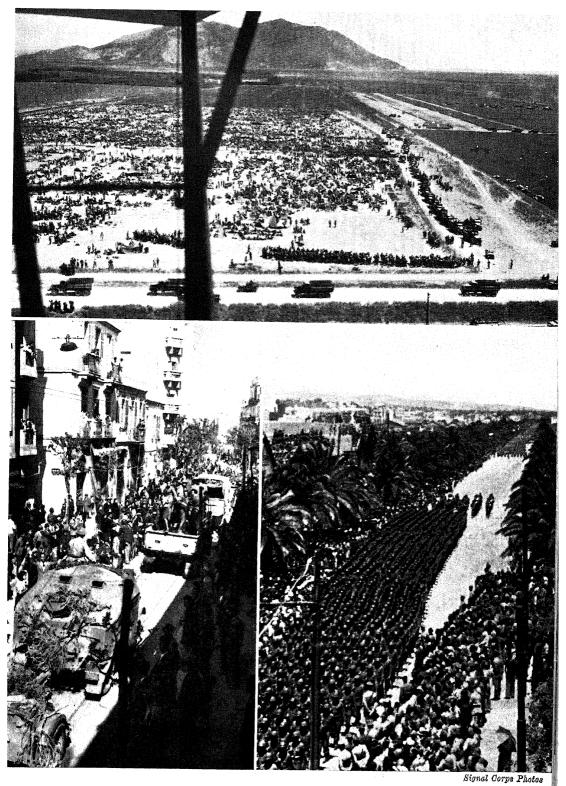

To meet the Allied invasions from the West and South the Germans had 7 divisions in Norway, 18 in the Balkans, 20 to 25 in Italy and between 45 and 50 opposite Britain. These were formidable forces, but again they were stretched far and fairly well pinned down where they were. It was doubtful that the Germans had a large strategic reserve anywhere. They could only regain such reserves by a general and successful retreat from Russia.

# TUNISIA-ITALY CAMPAIGNS

The Drive for Tunisia. Next in importance after the turn of the tide at Stalingrad was the Anglo-American offensive in North Africa. This was not a second front as the Russians understood the term, one drawing off a large number of Axis divisions, but it was a long step toward seizing com-plete control of the most vital waterway in the world, the Mediterranean Sea. That would shorten by 4,000 miles the route to Russia's southern window and to our base against Japan in India. It would also open up all Southern Europe to attack and force the Nazis to fight, or be ready to fight, at the farthest distance from their center of power and at the end of dangerous communications.

The Allied landings in Morocco and Algeria, on Nov. 8, 1942, met considerable resistance from the Vichy French, but not as much as had been expected. This might have enabled us to seize Tunis also, had the second and third waves of shipping from Britain been timed to arrive a few days earlier. There was, however, considerable danger of air attack from Sardinia and Sicily on our convoys, and the necessity of concentrating most of the troops originally landed around Spanish Morocco, where 140,000 troops of the Spanish fascist regime were capable of causing serious trouble in our rear. But for the holding action which Franco's troops performed, the bulk of the Anglo-American forces could have been rushed to Tunisia faster and sooner. As it was, they lost the race for the control point of the Mediterranean narrows by only a matter of two days. The British First Army advanced 300 miles in a week and was only 12 miles from Tunis at the end of November, but could get no closer. The Axis had thrown in too many troops, both by sea and air.

Then as British and American troops wrestled with muddy air fields and 500 miles of hilly roads, Marshal Erwin Rommel hastened his retreat across Libya from the east. The capital city, Tripoli, was surrendered to Gen. Bernard Law Montgomery's British Eighth Army on January 24 and by the end of the month the bulk of Rommel's forces were entering Tunisia, where the French Mareth line, erected as a defense against Italy, awaited him.

Battle of the Faïd-Kasserine Passes. By this time American troops were at Maknassy, 33 miles from the Gulf of Gabes, and on February 1 they attacked the Germans at Faïd Pass farther north in Central Tunisia. The attack was rebuffed and on the 14th a veteran German armored division smashed through American positions in the Faïd-Sened sector and advanced 18 miles, breaking one counter attack. Another American tank attack regained 6 miles, but on the 17th and 18th the German 21st and 10th armored divisions drove our tank forces back 22 miles and captured both Sbeïtla and Kasserine. Intending to teach the green Americans a lesson, the enemy recovered 4,000 square miles, drove a wedge between the American and British forces, and disarranged Allied offensive plans.

Using new 60-ton tanks with 7 inches of armor on the turret, the Nazis took Kasserine Pass on the 21st but were then contained as veteran British units rushed south and joined in the fighting. On the 23rd, the German armored columns were battered to a standstill by American guns and joint R.A.F. and American air assaults. The next day smashing counter attacks by all arms pounded the Germans back 14 miles. They were obliged to burn ammunition stores and retreat with lights on through the Kasserine Gap.

Allied teamwork in the field was registered in the high command on February 11 by the ap-pointment of three veteran British leaders to command the ground, air, and naval forces, all to serve under the American commander in chief, Gen. Dwight D. Eisenhower—Gen. Sir Harold Alexander in the field, Air Marshal Sir Arthur William Tedder, and Adm. Sir Andrew Browne Cunning-

The emergency created by the Faïd-Kasserine defeat was so real that two American divisions were withdrawn from the watch on Spanish Morocco; the artillery of the Ninth Division covered 770 miles in three days en route to the Tunisian front. After the enemy was stopped he retreated rapidly, leaving a trail of wreckage behind him, and lunged at the British First Army in the north on February 27 and at the British Eighth Army

in the south on March 8.

The Mureth Line Forced. These attacks were soon repulsed and a new American corps of four divisions pushed the enemy from the west, retaking the important road center of Gafsa on March 18, while the Eighth Army pounded Rommel from the south. He was thus unable to concentrate his reserves to stop either enemy. General Montgomery's men outflanked the main Mareth line positions on March 29 in one of the most brilliant engagements of the campaign. The waste land crossed was the worst encountered in the 2,000

mile advance from Egypt.

Axis Debacle. As the Germans retreated northward the Allied forces concentrated on a constantly decreasing target. Allied planes in great numbers pounded the German columns, moving bumper to bumper. By April 11 the Americans recaptured Faïd Pass. All forces advanced slowly, the Eighth Army taking Enfidaville on April 20 and the American Second Corps storming Hill 609 and gaining Mateur in the north May 3, their biggest victory. American troops were by now veterans. They had done their part in all the final stages, though the bulk of the fighting was done by the British throughout the campaign. The final knock-out blow was delivered by the British First Army, reinforced by three divisions from the Eighth, moved around from the south to the north while the Germans still faced south.

Tunis and Bizerta were captured by British-American forces on May 7, 181 days after their landing in North Africa. Thereafter the Axis remnants pressing into Cap Bon were harried by swarms of planes and swiftly moving columns which shot them down or rounded them up. In the entire campaign 267,000 Axis troops were captured, most of them in the final days. American casualties were 18,558, including 2,184 killed. London estimated that the entire African war had cost the Axis 750,000 men and enormous quantities of

supplies.

Decisive Air and Sea Superiority. Allied air superiority was a leading factor throughout the Tunisian months. In the final days it was overwhelming. By April 12, 1,253 Axis planes had been shot down and nearly 1,000 hit on the ground. The next day the greatest single air engagement of the war recorded thus far took place off Cap Bon when 74 Axis planes were shot down, including 58 large Junkers-52 transports. A week later the enemy lost 20 more transport planes approaching Tunisia with troops and gasoline. As early as April 6, 1,000 attacks were made by Allied planes on air fields and shipping, but on May 7 there were 2,500 plane sorties in one day. Neither dive bombers nor tanks held any terrors for the British leaders, who felt that both had been mastered by superior guns. While the enemy was incessantly pounded from the air, both planes and warships took a steady toll of Axis shipping. As early as February 17 British submarines had sunk 54 Axis supply ships in the Mediterranean, damaging 36 others, and their torpedoes were equally effective in the later weeks. On April 7, 17 Axis ships were hit by air attack, and on the 10th the Italian heavy cruisers Trieste and Gorizia were put out of action near Sardinia by American Flying Fortresses

by American Flying Fortresses.

Air assaults on Sicily gained momentum several weeks before the end in Tunisia. American airmen made a 400-plane assault on Palermo on May 9, their largest war effort to date. The Italian fortress island of Pantelleria was bombed into surrender on June 11, after 20 days of steady air assault and several naval bombardments, and the way for the

invasion of Sicily was open.

The Conquest of Sicily. For the following month all arms of the Allied forces underwent intensive training while an invasion armada was assembled and the ports and air fields of Sicily were systematically bombed by planes based on widely scattered air fields in North Africa. This converging attack also blasted the defenses of Southern Italy, especially Naples and along the Strait of Messina.

Naples and along the Strait of Messina.

The invasion of Sicily was begun in the night of July 9–10 by one of the largest air- and seaborne expeditions yet assembled. Transport planes and gliders carried both British and American troops behind the coast line. The American 82nd Division was dropped beyond its expected targets but nevertheless aided in diverting the enemy and in seizing some beach heads. An air field was also

soon taken.

Tactical surprise was achieved. The enemy had expected the attack to come on the southwest coast and was unable to shift his forces quickly enough to the southeast.

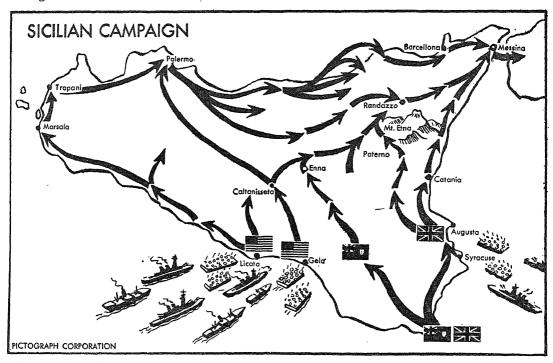

The immense fleet of 3,200 transports, landing barges, and boats of all kinds was covered by great swarms of planes, bombers and fighters, as well as by warships, little and big. The landing by American units near Gela was comparatively easy, since the Italians had nowhere done much to construct defenses and were quick to surrender in droves. Yet before heavy weapons could be put ashore the German 15th Panzer Division came up and almost forced the invaders back into the sea until a night attack by the exhausted Americans retrieved the situation. Allied destroyers had strongly assisted during the day, pounding the German tanks with their guns.

The invasion land forces were again commanded by General Alexander. General Montgomery's British Eighth Army made landings on the southeast coast and a new American Seventh Army under Lieut. Gen. George S. Patton, Jr., took the south

coast.

After the comparatively narrow coastal plains were secured by the Allies, the three German divisions which had to be beaten were aided by excellent defensive geography. Sicily is a maze of naked rock mountains with peaks and cliffs rising sharply above narrow valleys. Broken hills 2,000 feet high run into two mountain chains twice that height, with the 10,000 foot Mt. Etna massif in the northeast dominating eastern Sicily.

It was Mt. Etna which enabled the Germans to make a fairly prolonged resistance. Standing on the eastern flank of the mountain as it goes down to the sea at Catania they were able to hold up the Eighth Army until the Seventh had cut across the island to the north coast, taken Palermo, on July 23, and rolled the remaining German forces back along the north coast until all the Germans were in the small triangle framed by the sea behind Mt. Etna. Repeated American landings behind the Germans on the north coast accelerated their retreat

The strategy by which American and British-Canadian forces crushed German and Italian defenses in 38 days of heavy fighting.

until this pressure from the west compelled the enemy to abandon Catania, on August 5, and retreat northward to the bomb-wrecked evacuation zone at Messina, which was captured on August 17, 38 days after the initial landing.

It has been evident since that much later trouble

would have been saved in Italy if the mainland could have been invaded when the conquest of Sicily was half completed, but assured. Mussolini was ousted from power in Italy by the fall of Sicily on July 25, Marshal Badoglio being made Premier. His Government dragged out negotiations for an armistice, which were already under way, until the Germans had time to throw 20 divisions into North Italy and to bring some of them to the Naples area, which the Allies invaded September 9, only one day after the capitulation of the Badoglio Government was announced. It is, however, not certain that light forces thrown into South Italy earlier would have been sufficient and it is clear that time is required to plan and assemble a tremendous amphibious landing.

In itself the Sicilian campaign was a well executed military operation which brought about important results. It made the Allied hold on the central Mediterranean secure. It brought about the fall of Mussolini and Italy's elimination from the war. Most of the Italian navy-5 battleships, 7 cruisers, and 11 destroyers—joined the Allied naval forces at Malta. A battleship, the Roma, was sunk by a German plane while escaping to Malta and the Nazis seized 25 Italian submarines in the Adriatic and the Aegean seas. On balance, the Italian fleet was eliminated from the German side and the augmented Allied navies freed to operate against Japan. The western Mediterranean was also more firmly gripped by the acquisition of Sardinia, with Italian help, and of Corsica through the action of French forces. In Corsica the Germans were aided by Italian Fascist army officers.

Rome Bombed. To impede the sending of Axis re-inforcements south, Rome was bombed in daylight on July 19 by American fliers, who had been rigorously trained to avoid damage to cultural monuments. They directed their attack at the Ciampino airfield four miles southeast of Rome and the railroad yards on the north edge of the city. A mass of wreckage two miles long was left by the 500 attacking planes. One church nearby was damaged.

Ploesti Oil Fields Attacked. A far more dangerous air mission was executed on August 1 when 2,000 men of the Ninth U.S. Air Force took 175 Liberator bombers over the Rumanian oil refineries. The airmen had practised over a reproduction of the Ploesti installations erected in the Arabian desert. They were equipped with special low-altitude bomb sights and went in just above the targets, dropping 300 tons of bombs, mostly of the delayed action type, to impede fire fighting. Incendiaries caught quickly, forcing many of the later planes to fly through walls of flame and to bank steeply to avoid the explosions beneath them. The long overland trip gave the enemy time to assemble large numbers of fighters at high altitudes. These attacked as the invaders neared the target but were largely foiled by the low flying of our airmen in retreat. They stayed within 50 feet of the ground for 100 miles. About 30 bombers were lost in the 2,400-mile round trip. Fifty enemy planes were downed, and five of the 13 refineries were heavily damaged. The raid was one of many actions which indirectly aided the Russians.

Italy Invaded. The invasion of the Italian peninsula was timed to give the Italian troops on the mainland opportunity to hear of the Badoglio Gov-

ernment's capitulation. In telling Hitler why he had to quit, Badoglio explained that Italy's large beginning with Milan and Palermo, have either been destroyed or occupied by the enemy. Her industries have been paralyzed, her communications—of such importance because of the topography of the country—have been thrown into confusion."

The next day, on September 9, an invasion fleet which studded a thousand square miles of the Tyrrhenian Sea approached the long beaches of Salerno, south of Naples. The Allied landing forces -two British and one American divisions—were at once attacked by the 16th German Panzer Divi-

sion, supported by two others.

For the next week a bitter, costly battle raged, with the Anglo-American Fifth Army under Lieut. Gen. Mark W. Clark steadily pouring ashore with mountains of supplies and the Germans constantly pounding them and counter attacking from the nearby hills. The invading forces seized the port of Salerno and a narrow bridgehead 24 miles long, which was almost split a time or two by German pushes from the higher terrain. Ground had to be yielded repeatedly. British and American warships shelled the German positions and the Allied Northwest Africa Air Force threw every plane it had into the battle. On September 14 there were 1,888 plane sorties, many of them by four-engine bombers, one plane a minute dropping nearly a ton of bombs on the enemy's positions, or a total of 1,284 tons. At one time the German radio confidently claimed a Dunkirk, but by September 16 the Fifth Army had driven an eight mile wedge into the German lines and the next day junction was made with a part of the British Eighth Army which had crossed the Strait of Messina at Reggio Calabria on September 3 and hastened by forced marches up the west coast.

The main body of the British Eighth proceeded by sea to Taranto, inside the heel of Italy and advanced 200 miles up the east coast, taking Foggia on September 28, the greatest multiple air base in southern Italy—badly wrecked by repeated Allied bombings. Across the peninsula, likewise, the Fifth Army took Naples, on October 2, after the Germans had thoroughly looted the city, burned much of it and blocked the harbor with 30 sunken ships. Public buildings and factories were ruined.

Thus for the second time the massive attack methods of our commanders had eventually succeeded, but without the trial of swift, daring strokes much earlier which might have gained val-uable ports intact and saved months of time—long months to the many enslaved nations of Europe.

Wildly cheering crowds greeted the Allies at Naples, where the inhabitants were substantially without food and water. A week later a German time bomb killed 100 people in the post office, as the Allies established a line all the way across the Italian peninsula and began the slow business of

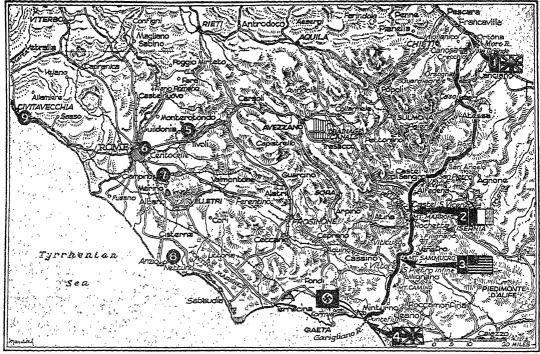

pushing the Germans northward. Progress was slow across muddy fields and

swollen rivers. The Volturno River was not crossed in force until October 15 in a night assault. When the Germans were blasted from one set of positions they took up another line, yielding slowly but turning "the soft underbelly of Europe" into some-thing very hard and prickly. Gains were in terms of three or four miles with the fighting often ascending steep mountain positions where climbing was extremely hazardous. Almost every communiqué mentioned rain and mud, and when nature did not provide, the Germans sometimes flooded the coastal areas from reservoirs in the hills.

By November 8 the enemy's line from Mondragone, on the west coast, over Mount Massico to Venatro was generally punctured, but the Germans increased their strength to ten divisions. By this time the commentators had about abandoned predictions of an Allied landing behind the Germans, under an air umbrella from Corsica, concluding that our high command preferred now to regard the Italian operation mainly as a holding one, saving their strength for other and more promising landings.

The Germans destroyed the port of Gaeta on November 9 and slowed the Allied advance by counterattacks until incessant floods enforced a stalemate in mid-November. Thereafter, the two Salerno." On the 23rd there was bitter fighting along the entire front, with a desperate struggle beginning for the pleasant coastal town of Ortona on the Adriatic. The 15,000 inhabitants of the place took to the hills as the Canadians began to batter the Germans out. German tanks were sunk into cellars so that their guns could fire flush with the street levels, and it took a week to blast them out.

Then the Eighth Army started up the coastal road toward Pescara, some 15 miles north, from which an important lateral road ran across Italy to Rome, but a mile a day was reported as good progress. Every sort of booby trap and gunfire slowed up the advance. Heavy rains persisted on

Courtesy of The New York Times

#### ITALIAN FRONT AT THE CLOSE OF 1943

The British Eighth Army (1) was pushing northward from ruined Ortona, while French Moroccan formations (2), American units (3) and British forces (4) of Gen. Mark W. Clark's Fifth Army were advancing slowly on the western half of the front. Meanwhile Allied bombers were softening up German airfields (5–9) in preparation for the amphibious landing in the Anzio-Nettuno area that followed towards the end of January, 1944.

armies inched ahead until December when the Italian front began to take the headlines again. Allied troops drove their way over the highest peaks of the Mount Cassino mass, on December 4, and an air and artillery bombardment, thought to be equal to that which cracked the German line at El Alamein, broke the heart of the enemy's winter line. Fierce German attacks compelled the Eighth Army to yield ground, but on December 8 General Clark's men had won control of the major heights over 25 square miles of the Camino-Maggiore mountain masses "by the grim process of gouging their way from height to height and pounding, knifing, and scrambling up and over."

Slow Progress Toward Rome. This description continued to apply to the fighting in Italy during the last half of December. On the 20th San Pietro Infine was captured by General Clark's Fifth Army "after the fiercest and bloodiest fighting since

the entire front, reaching flood proportions frequently. Indian units captured Villa Grande on the 27th, a week after French troops had been reported in action on this front. The Americans gained full possession of the Mount Sammucro massif and moved down its slopes toward Cassino.

Everywhere progress was slow and bitterly contested. Some observers predicted the capture of Rome during the winter, but others recalled that Hannibal had spent a dozen years in Southern Italy without being able to reach Rome. As the year ended, the Allied armies were still distinctly closer to Naples than to Rome, and a strong new "Siegfried Line" was reported to have been completed between them and the capital.

Both sides had accepted the Italian fight as a limited engagement. Intending to use their main strength elsewhere, the Allies apparently aspired only to capture the Rome cluster of air fields and to pin down a dozen German divisions, while the Germans were content to make their foes pay heavily for inching progress up the peninsula.

#### THE BALKANS

Allies Win and Lose Greek Islands. For many months the Germans reigned supreme in the Balkans until the collapse of Italy opened up chinks in their armor of force and terrorism. While they were busy coping with the Italian defection the British Middle Eastern Command seized a foothold on Leros, Samos, Kos, and other small Dodecanese islands. Leros was valuable as a naval, seaplane, and submarine base, and all of the islands gave the allies footholds for attack on Crete.

The Germans reacted with their customary vigor and rushed reinforcements from Salonika and the Piraeus to prevent other Allied seizures. On October 4 they attacked by sea and air on Kos and soon captured it. On November 14 Leros was also invaded and captured, after a five-day battle during which the Germans maintained air supremacy, and thereafter the Germans rapidly restored their

position in the Dodecanese.

This success was welcome to the victory-starved Germans and it was of considerable value in holding their Balkan satellites in line after the fall of Italy. The reduction of Crete—rocky, heavily fortified, and defended by Germans alone, or even of Rhodes in the same circumstances, would not be as easy as the conquest of Sicily and Sardinia. Rhodes was, however, frequently bombed and Allied squadrons ranged over other Greek bases.

Partisans Rise in Yugoslavia. One of the best gains from the collapse of Italy was the confusion it caused in Yugoslavia, where the Italians had been doing much of the garrison duty. When their government quit, the Italian troops generally stopped working for the Germans. At least one whole division joined the Yugoslav Partisans and many other smaller groups of Italians did likewise. Equally important was the amount of Italian arms and munitions which fell into the hands of the Partisans, and the disorganization in the Axis ranks enabled them to organize and expand the territory under their control.

The Partisans represented mainly Croats, Slovenes, Bosnians, Montenegrins, and other elements in Yugoslavia which had resented the dominant role of the Serbs in the Yugoslav kingdom. Throughout its life they had protested against the centralized nature of the government, preferring a real federal structure, but without avail. Now rejecting German rule they aspired to create a broader Yugoslavia, perhaps to include also Bulgaria.

Naturally this movement was frowned upon by the Yugoslav Government-in-Exile, which moved from London to Cairo after the fall of Sicily. Gen. Draja Mikhailovitch, King Peter's field commander, was often accused of fighting the Partisans more than he did the Germans. Not a little blood was shed between the two guerrilla forces. Both claimed

that their numbers were much larger.

For a time the world could make little out of the controversy, except that Russia was backing the Partisans and that the Partisan leader, Gen. Josip (Tito) Broz, had been in Russia. After the Allied invasion of Italy it gradually became clear that the Partisan movement was the larger and that it was fighting Germans much more successfully. While Mikhailovitch was biding his time and waiting for the Allied invasion, partly on advice from London and Cairo, the Partisans were fighting and thus drawing people rapidly into their ranks.

When southern Italy was occupied by the Allies, small boats began at once to rush supplies over the Adriatic to the Yugoslav Partisans. When Italy dropped out of the war the Germans rushed to seize the Dalmatian coast, but the Partisans took control of most of it, including Susak and Ogulin. They also entered Trieste and began to capture the islands along the Yugoslav coast. Marshal Erwin Rommel was placed in command of the German effort to recover this region, but success for the Partisans continued to be reported. Mikhailovitch's forces also became more active against the Germans.

On November 13, Partisan forces in Belgrade sank an armored river boat on the Danube and captured another. Allied air forces blasted Sofia, interfering with German rail traffic into Greece. The Germans sent heavy reinforcements into Yugoslavia.

On December 9 the British Parliament was told that more help was being given to the Partisans than to Mikhailovitch. The next day Secretary Hull said this was also true of American aid. On December 22 the Partisan army was reported to comprise 300,000 men and women fighting along a 350-mile front against some of the best soldiers of

the German army. See Yugoslavia under History. Guerillas in Greece. In Greece, also, the collapse of Italy and the inflow of Allied supplies was followed by an increase in the numbers and activity of widely scattered guerrilla bands. The guerrilla activities were coordinated with Allied strategy through British liaison officers sent to Greece by General Wilson, the Allied commander in the Middle East. However the outbreak of civil war in the autumn between Communist-led and non-Communist guerrilla organizations enabled German troops to make headway against them. See Greece under History.

These political difficulties somewhat weakened the chances of effective support for an Allied invasion of the Balkans, yet the rapid Russian advances toward Rumania made an Allied push up the Vardas-Morava Valley from Salonika attractive, if Germany's Aegean fortresses could be stormed, and great numbers of brave men were waiting to intensify their work of cutting roads and railways, blowing up bridges, and keeping the

Germans cooped up in the cities.

### THE WAR IN THE PACIFIC

Pause in the Pacific. The month of November, 1942, was notable not only for the turning of the tide at Stalingrad, the defeat of Rommel at El Alamein in Egypt, and the allied landings in North Africa, but for a series of air-naval battles in the Southwest Pacific which made good our invasion of Guadalcanal and of the Buna-Gona area in New Guinea.

The Buna area was finally cleared of Japs on Jan. 3, 1943, and they abandoned Guadalcanal February 9, shortly after the battle-weary marines had been relieved by the army. Relative pause in the first quarter of the year was broken on March 3 by the total destruction by air in the Bismarck Sea of a Japanese convoy of 22 vessels—12 loaded transports and 10 warships. Remnants of the fleet, including barges and lifeboats, were wiped out the next day. The enemy lost 82 planes and about 15,000 troops which were en route from Rabaul to Lae on New Guinea. Our losses were one bomber and three fighters. Two enemy cruisers and one destroyer were also sunk near New Ireland on April 4.

The Bismarck Sea battle was followed by two

heavy air attacks on Rabaul late in March and by a series of Japanese air assaults early in April. Two heavy attacks on Guadalcanal netted four American ships sunk. Large Jap formations also raided Oro Bay, Port Moresby, and Milne Bay, New Guinea. Enemy losses were heavy in all these encounters.

Attu and Kiska Recovered. In the North Pacific, the Japanese base on Kiska was bombed throughout the day, when the fogs cleared, on several days during April. Amchitka Island, 70 miles away, was occupied as a U.S. plane base on May 7 and Attu, the outermost Aleutian island in Japanese hands, was invaded May 14. Enemy resistance was finally ended two weeks later in stubborn fights on rugged peaks above the clouds.

In succeeding weeks Kiska was shelled and bombed more than 100 times and on August 15 a major landing force found the island devoid of Japanese. The enemy had gradually withdrawn approximately 10,000 troops at night and during the perennial fogs. Previously, several air attacks had been made on Paramushiru, the Japanese base in the Northern Kuriles.

Persistent pressure led by the Chicago Tribune for reversing U.S. global strategy and going all out against Japan was met by a statement from President Roosevelt in May that the larger part of both naval and ground forces overseas were in the Pacific. Gen. Douglas MacArthur, Allied commander in the Southwestern Pacific, indicated his own dissatisfaction on August 9 by saying: "We are doing

what we can with what we have." On September 21 he again assailed "island hopping" strategy and strongly emphasized his willingness to play a subordinate role.

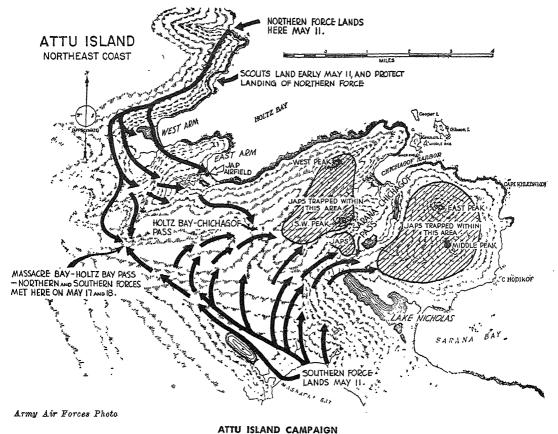

pouble Offensive in the Southwest. Allied sea and air superiority was increased by the submarine sinking of 20 Japanese ships during June and the destruction of 94 Japanese planes at a cost of 6 at Guadalcanal on June 17.

On July 1 two closely synchronized offensives were begun in the Southwest Pacific. General MacArthur's forces moved on the Japanese base at Salamaua, New Guinea, and took it on September 13. Lae fell on the 18th. Parachute troops and artillery dropped behind the enemy had completed his encirclement.

In the Solomons Adm. William F. Halsey's forces occupied Rendova Island near New Georgia, on July 2, and began to shell Munda, the Japanese base on New Georgia, which was soon invested by land and eventually captured on August 7 after weeks of jungle fighting.

Two naval battles in the narrow waters of the Kula Gulf, north of New Georgia, featured the struggle for Munda. On July 5 nine Japanese warships were believed to be sunk and on the 13th a cruiser and three destroyers. Our navy lost a cruiser in the first battle.

Mounting air attacks left both Munda and Salamaua in ruins before their capture. Our fighters also destroyed seven Japanese ships on July 18, including a cruiser and two destroyers, and dropped

The map shows the landings of the U.S. northern and southern forces and the routes by which they converged to trap and exterminate the Japanese defenders.

133 tons of bombs on Bairoko Harbor, near Munda, on the 21st. This heaviest Pacific raid to date was exceeded on August 18 when 10,000 bombs were loosed over Wewak in central New Guinea. A large fleet of planes was caught parked closely and 120 of them destroyed. The whole peninsula was left aflame. Return attacks the next day destroyed other aircraft, including 25 shot down. At the same time long-range Allied bombers blasted the naval base at Surabaya, Java, in a 2,400-mile trip, leaving fires visible for 140 miles. While no branches of the armed forces could be spared, it was clear that the air arm was of crucial importance in the vast stretches of the Pacific.

Autumn Advances. On October 4 Finschhafen, Japanese-held port on New Guinea opposite New Britain, was taken and a coordinated land drive from Port Moresby up the Markham Valley flanked and neutralized all Japanese positions along the New Guinea peninsula as far north as Madang. In the Solomons a Japanese evacuation of Vila on Kolombangara Island was broken up when American warships shelled 40 barges laden with troops. Another evacuation attempt led to a sea battle on the 8th which resulted in the loss of a Japanese cruiser and two destroyers.

The silent war of our submarines in the Pacific came momentarily into the news when the President announced, on October 13, that 750,000 tons of Japanese shipping had been sunk by our subs in the preceding six months.

The next day General MacArthur assembled the

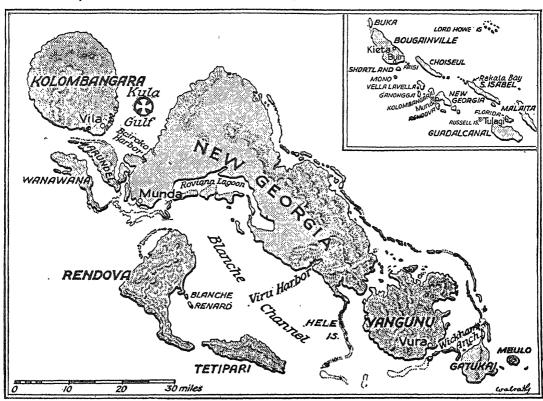

largest air force yet mustered in that region and again caught the Japanese by surprise at Rabaul. Harbor installations were wrecked, 175 planes were destroyed or damaged, and 126 ships hit, including several of fair size. Five American planes were lost in the attack which struck at noon. Once again it was demonstrated that Pearl Harbor disasters cannot be averted even in time of war.

Japanese air strength was obviously being rapidly worn down. In an effort to regain the initiative, Japan sent fresh planes into battle over the whole Southwest Pacific area on the 17th, but only succeeded in losing 104 planes to 2 Allied planes shot down. On the 20th they lost a crowded 8,000-ton transport to air attack off New Ireland. Our Navy announced that thus far 852 Japanese supply boats and 305 warships had been hit by airnaval action.

Late in October the Japanese made repeated efforts to break out of Sattelberg and recover Finschhafen, but were eventually defeated by Australian troops and scattered in the bush.

On the 26th a two-day air attack on Rabaul ruined the Japanese attempt to rehabilitate that base and wrecked another 200 planes in the process, at a cost of 4 Allied planes. More than 900 Japanese aircraft had been destroyed in two weeks. Nevertheless, the Japanese flew in more navy planes from Truk and 60 of these were destroyed on the 28th.

Amphibious American forces occupied the Treasury Islands south of Bougainville Island, last im-

ADMIRAL HALSEY'S ADVANCE IN THE SOLOMONS

After crushing Japanese resistance on Guadalcanal, U.S. and New Zealand air and amphibious forces used the Russell Islands, Rendova, New Georgia, Mono (Treasury), Shortland, and Bougainville islands as stepping stones in their drive ragainst the main enemy base in the South Pacific at Rabaul in New Britain. The cross shows the scene of the naval battles in the Kula Gulf that broke Japanese supply lines to Munda.

portant Japanese base in the Solomons, on October 29, and five days later Empress Augusta Bay was seized, half way up the Bougainville west coast. This brought large new Japanese forces into Rabaul again. They fought fiercely to protect themselves against another air attack on November 4. The Allied raiders lost 9 bombers and 10 fighters, but sank 3 destroyers and 12 merchant ships totaling 50,000 tons and damaged an equal tonnage. In the air 85 Japanese planes were destroyed.

Nevertheless, a convoy of 19 Japanese ships was sighted on the way to Rabaul on November 6 and another air assault on Rabaul, on the 13th, bagged 88 Japanese planes, a cruiser, and two destroyers. Fifteen other warships were damaged. After this, aerial observation indicated that the Japanese were at last beginning to give up the attempt to use Rabaul as a main base and were moving a large part of their forces to Kavieng, New Ireland, 150 miles farther north.

The Japanese also lost a cruiser and four destroyers to naval action, November 5, with an equal number damaged in attempting to reinforce their forces near Empress Augusta Bay.

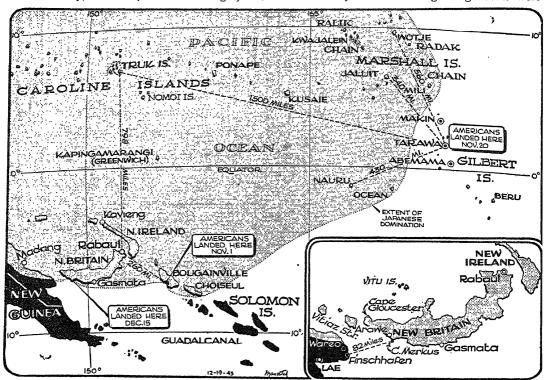

Gilbert Islands Stormed. On November 17 General MacArthur acknowledged that supplies were now being received in larger quantity but declared that less than 10 per cent of current U.S. military shipments were being sent to the Southwest Pacific. The next day, a five-day air assault on the Japanese-occupied Gilbert Islands was begun by the Central Pacific Naval Command and landings were made on the low coral atolls of Makin and Tarawa on the 22nd. The air and naval bombardments had been so heavy, at least 2,000 tons in weight, that

little resistance was expected. On Tarawa atoll, however, the Japanese had constructed such deep shelters that their forces held out against a division of U.S. Marines for some three days. American losses were 1,026 killed and 2,557 wounded—very heavy for the number of men engaged.

After inspecting the Gilberts, Adm. Chester W. Nimitz declared that his forces would go on to Japan through the Central Pacific. Maj. Alexander de Seversky predicted that this would be impractical, due to the many opportunities for Japanese land-based aircraft in this area.

Advances in Southwest Pacific. In mid-December heavy Allied air attacks were made on the western end of New Britain. A new peak was reached when 400 tons of bombs were dropped on Arawe, 50 miles from Cape Gloucester, on the 16th, just prior to an American landing near by, and the Arawe air strip was captured on the 20th. Meanwhile, the bombing of Cape Gloucester proceeded on the new high level. About 2,900 tons were dropped before U.S. Marines on December 26 landed on both sides of Cape Gloucester, cutting off the Japs on the peninsula. Both landings were followed by tardy Japanese air assaults which cost them many planes. Few losses attended any of the landings.

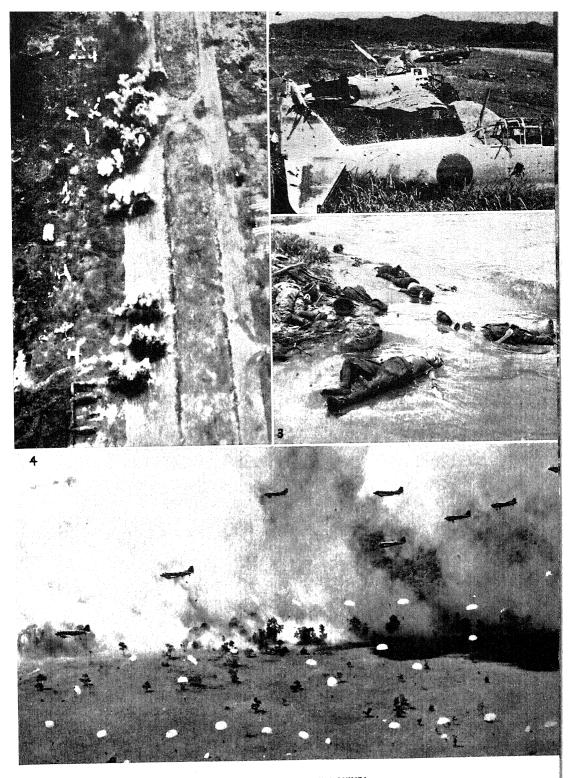

Air fields had now been seized on New Britain for closer assault on Rabaul at the eastern top of the half-moon island. But already the Allied air assault had advanced to pay close attention to Kavieng at the north end of the long, narrow island of New Ireland. Four enemy ships were hit there on December 23 and four days later a Japanese destroyer and two large cargo boats were

sunk. Air losses in the latter engagements were 41 Japanese planes to 11 U.S. carrier-based aircraft.

Allied air superiority was established. However Hansen Baldwin, the military critic of *The New York Times*, observed in *Foreign Affairs* (January, 1944) that "many of the claims of enemy losses particularly air losses-received from the Southwest Pacific have borne the earmarks of exaggera-tion." Baldwin concluded also that the statements issued from General MacArthur's headquarters during the year could "mean only one thing: that General MacArthur is dissatisfied with the strategic plan for the war as a whole and for the Pacific in particular, and with the role assigned to him and to his forces. He wants to make the main effort; he does not want to assume a secondary role.

On New Guinea a surprise landing at Saidor on Jan. 3, 1944, far up the coast, quickly gave the Allies a new harbor and airfield, 110 miles north of Finschhafen and 55 miles below the Japanese stronghold at Madang, and encircled intervening

Japanese forces.

On December 17 it was announced that four airfields had been developed in the newly conquered Gilbert Islands. Here as elsewhere the Seabees did record time construction work. On the 24th a Japanese 20-ship concentration was spotted in the Marshall Islands which were now being bombed by American forces.

The Japanese were being pushed back in the Southwest Pacific, but as the year ended this theater did not appear to be capable of decisive development, for even if the Philippines were recovered our forces would still be far from the heart of Japan. As in Europe, the Allies had only seized

jumping off points from which to attack the enemy.
Routes for Invasion of Japan. The best route of attack upon Japan was the subject of much debate. The slow conquest of the Solomons indicated that the obvious approach from the south was a long undertaking. Direct attack from Hawaii straight across to Japan seemed to involve too great distances. The route of the Alcutians also posed a 2,000-mile hop to Tokyo, unless some of the Kurile Islands could be taken.

These difficulties led to constantly recurring demands, especially from isolationist elements, that Russia come into the war against Japan and give the United States air bases on the Siberian mainland. This demand was alleged to cancel out Russia's cry for a second front in Europe. Others, however, denied its validity, pointing out that the great Japanese army husbanded in Manchuria could quickly cut off the nearest of the coveted air bases, besides involving Russia in a first class war when her strength was already taxed to the limit.

The remaining route of attack, a back door approach through Burma into China, was recognized at the Quebec Conference between President Roosevelt and Prime Minister Churchill in September when Lord Louis Mountbatten was given a command based upon India to cover the Burma-

Indo-China-Malaya region.

In the meantime, as Japanese shipping was steadily whittled down and her air force suffered constant decimation, the possibility increased that pressure might be excreted on the enormous Japanese conquests from all sides, after the manner of the constriction of Hitler's swollen empire. This prospect was advanced by the phenomenal naval building in the United States, where the number of naval vessels was increased from 350 to 805 in the two years after Pearl Harbor. A whole navy was completed in 1943. This mighty force combined with the British Navy after the defeat of Germany would give large possibilities for maneuver and concentric pressure, when backed by expanding land and carrier-based aviation.

The vast distances involved nevertheless indicated a long war before the decisions of the Cairo conference in December could be enforced (see United Nations for these decisions).

## CHINA-BURMA THEATER

The War in China. During the year an increasing number of people looked to the Chinese mainland as the platform from which decisive attacks against Japan could be launched. Yet the China theater had been longest in the war, was most impover-

ished, and most difficult of all to reach.

In China the Japs had accomplished the maximum of strangulation with a minimum of force. They had seized all the ports, nearly all of the rivers, railroads, and canals. Only short stretches of communication lines, leading from nowhere to nowhere, remained in Chinese hands. With the seizure of the Burma Road in 1942 the last sizeable link with the outside world had been cut. All that remained was a few ancient trails connecting with India through Central Asia.

One of these, the Ledo Road leading to Assam, was the scene of another epic of road building (see China under *History*). Yet even the completion of this road would only open up a new trickle of life-blood to China's poorly equipped armies.

Chennault's Air Epic. Faced with these slender prospects the attempt to fly supplies into China from India had to be made. First came the nuclear planes of General Chennault's 14th American Air Force. Then gasoline and equipment for them and more planes and bombs until a great airfield throbbed deep in the heart of China. It was a fantastic undertaking. Chennault's planes had to make four trips over the 17,000-foot Himalayas to ac-cumulate enough gasoline and supplies for one bombing raid. One plane could bring in four tons of gasoline, but half of this had to be saved for the return trip to Assam. Nevertheless, the project grew slowly and it gave the Chinese hope—and an air cover.

On January 14 Chungking announced the most important victory in months when Sinyang was captured on the Peiping-Hankow Railway. A month later the Japanese began several drives and on March 12 they took the important city of Hwaiung in North Hunan, only to lose it again a week later. Presently, too, they were driven from South Yunnan, back into Burma. The Chinese soldiers were clad in their ragged uniforms of various kinds. They wore straw sandals or went barefoot against Japs in fur-lined coats and gloves, but they kept killing Japanese, though not as barbarically as the latter had operated in slaying every man, woman, and child in considerable areas of the China coast in which Doolittle's American fliers had landed in 1942 after bombing Tokyo. This atrocity, announced by Chiang Kai-shek on April 28, took the lives of tens of thousands of people.

First Rice Bowl Invasion. On May 23 the Japanese began one of their periodic incursions into the rice bowls of Hunan and Hupeh provinces in East Central China, but a week later the Chinese announced one of the biggest victories of the war. Five enemy divisions were routed and a record air victory achieved. Thirty-one Japanese planes were accounted for. The Chinese occupied the west bank of the Yangtze for a considerable distance opposite Ichang and in the Lake Tungting region. They claimed 30,000 casualties among the 100,000 Japanese troops which started the invasion. A small number of good fighting planes had made a big

difference in the Japanese calculations.

Seven Years of War. On July 7 China began her seventh year of total war. A week later the 14th U.S. Air Force swept the docks at Canton and the Haiphong area of French Indo-China. On August 29 Hong Kong and Canton were bombed on two successive days. Enemy planes totaling 78 were shot down and many destroyed on the ground.

Second Rice Bowl Raid. In mid-November a Japanese force of 80,000 men invaded the rice bowl country to seize or destroy the autumn rice crop. Two columns made a determined effort to encircle Changteh, a city which had balked three previous efforts to take Changsha, capital of Hunan Province, farther south. The fighting was desperate, and on December 3 the Japanese took Changteh, only to be driven out six days later in a general defeat along the entire sector. Entering the city, correspondents found only 30 of the city's 10,000 buildings still standing, and these damaged. In the last days of the year the badly mauled Japanese forces still retreated, but they had taken away large amounts of rice.

The 14th American Air Force aided a Chinese advance toward Hankow in mid-December and bombed Hong Kong and Formosa. China's need to recover contact with the outside world had not diminished. Only when Allied shipping could reach her southern ports again was the real push against Japan likely to be feasible. Also see CHINA under

History.

Burma Campaign Organized. In August Lord Louis Mountbatten was appointed commander-in-chief of a new Allied East Asia Command. During the

Courtesy of The New York Times

LIMITS OF ADM. LORD LOUIS MOUNTBATTEN'S EAST ASIA COMMAND

latter months of the year he was engaged in organizing a campaign for the reconquest of Burma from bases in India and Ceylon. Opening the back door into China would be only a partial solution of the problem of getting at Japan, but it would help.

Some military activity began on the India-Burma border in mid-October as the monsoon season waned. British and Indian troops were operating in four widely separated sectors on the long frontier. The R.A.F. and the 10th American Air Force, based on India, raided Japanese bases and com-munications in Burma throughout 1943. At the end of the year some small Allied land gains had been made in the direction of the port of Akyab on the Bay of Bengal, but the major drive still appeared to be some months distant. See BURMA under His-

Tokyo Still Well Protected. From any angle that the Japanese problem could be viewed it was a knotty one. Japan's doom would eventually come, but barring great aid from Russia, which she might not be able to give, the smashing of Japan's hold on East

Asia was a long undertaking.

The great difficulties ahead in the Orient showed how narrowly the North American island had escaped being encircled by two giant gangster empires, each commanding the labor and resources of half a billion people. The size of the task ahead in Asia also buttressed the decision of the Allied governments to smash the more dangerous Nazi Empire first, in order to make sure that both would eventually be liquidated.

Casualties. Up to the end of 1943 American casualties were much lighter than had been anticipated. The dead totaled 33,153, the wounded 49,518, missing 33,617, and prisoners of war 29,-898. The latter were mostly the men who had surrendered to the Japanese in the Philippines and were being rapidly exterminated by the enemy.

Three United States officers who escaped and made their way to Australia gave in full detail the story of torture, murder, and starvation which had already killed a third of the 22,300 Americans who surrendered to the Japs and half of the 28,600 Filipino soldiers captured on Bataan. Every form of beastly cruelty had been used to destroy men who were entitled by all civilized law and custom to good treatment, including the same food, quar-

ters and pay which the Japanese troops receive.
Aside from this grisly feature of war in the
Orient United States casualties had been lighter in the first two years of the war than in the nineteen months of American participation in the First World War. The dictatorships could and did spend men prodigally, deliberately sending whole armies to their death, as at Stalingrad and later in the Dnieper Bend, if high policy seemed to be aided thereby. The democracies, on the other hand, had to be more circumspect. The Allied commanders tried to win their campaigns with minimum loss of life. They relied heavily upon the great weight of fighting equipment from United States factories to overwhelm the enemy. Nothing could eliminate the sweat and suffering of the infantryman, but the slowness of many campaigns was largely due to a desire to spare him as much as possible.

Among the other Allies casualties ran far higher. British losses were fixed at 514,993 as early as September, 1942, with the dead totalling 92,089. The French still had over a million war prisoners in Germany. Russia had lost 5,000,000 combatants killed and missing, and some 50,000,000 civilians were starved, terrorized, or driven away to Germany. China had estimated 2,300,000 military deaths and five times as many civilians killed by the Japs.

No nation had suffered proportionately more than Poland. Approximately 200,000 soldiers and 500,000 civilians had been killed in Warsaw alone.

In the whole country 3,200,000 people had been slain by the Germans, according to estimates com-piled by the *Baltimore Sun*. Two million others had been sent to slave labor in Germany and an equal number deported from Western Poland to Central Poland. Losses in Yugoslavia would be comparable. See also GERMANY, GREAT BRITAIN, Japan, and other belligerent countries under History. For treatment of war wounded, see Psy-CHOLOGY.

#### THE WAR AT SEA

Less was known at the end of 1943 about the war in the waters than about the air and land battles. The sea fighters had to preserve a good deal of secrecy to protect the movements of ships. Their duties also kept them isolated on the high seas much of the time, where it was not easy to announce results. Moreover, most of the achievements of the sea warriors hardly amounted to dramatic news. Plowing over stormy waters for days, averting attacks on convoys by their very presence, driving submarines down without being sure that they were sunk—much of the sailor's life was hard, yet monotonous, performed away from the plaudits of press and microphone.

Until lately, too, this had applied in double degree to the unique service of the merchant seamen. Tough work from port to port, danger all the way, few amenities and no applause was the merchantman's lot, even if he were torpedoed and thrown into a sea of burning oil. Yet the war would come to a halt without his dogged per-sistence, often from one icy sinking to another. Fortunately, his indispensable role was now being better recognized, in comforts aship and ashore and in official and public recognition.

Magnified Submarine War. The Germans began this conflict in far better position to wage submarine war than in 1914—when the U-boats almost gave them victory. After Britain had trustingly given them parity in submarines, in the Anglo-German naval treaty of 1935, they plunged ahead with submarine construction until the start of hostilities enabled them to throw a far bigger fleet of the start of hostilities they in 1914 hosted also subs at Britain's lifelines than in 1914, backed also by much greater building capacity. This huge advantage was then more than doubled by the seizure of the entire coastline of Western Europe, unless an exception should be made of the coasts of Franco Spain and tiny Portugal. No longer were the German subs confined to the narrow egress of the German coastline. With a vast arc of fiords and harbors in their hands and half encircling Britain, her chances of survival seemed small indeed.

Britain's own magnificent courage, plus the 50 destroyers and other aids from the United States, enabled her to live until German efforts to cut off America's ever growing aid necessitated the entry of the United States into the shooting war in the Atlantic, some weeks before Pearl Harbor. Then America suddenly found herself blockaded by packs of submarines sinking ships all along the Atlantic coasts, especially in the southern regions, sometimes within sight of crowds on shore. Even

the Gulf of Mexico was invaded.

For months the U.S. Navy was relatively helpless until new escorts and other protective devices could be mobilized. Thereafter, the submarines frequently changed hunting grounds, all over the Atlantic Ocean, north and south, and maintained their killings at a punishing rate. Naturally they were far more formidable weapons than in 1917.

On Feb. 22, 1943, two ships were sunk in the North Atlantic, in spite of efforts to defend them,

and 850 members of the U.S. armed forces were lost. The escort vessels available could not cover all assignments. They put up a great fight to protect the convoys, but swarms of U-boats hung on for days, striking especially at night. Thus on March 17 a convoy battle continued for 72 hours, three subs being sunk.

See Shipping for discussion of Allied shipping

losses.

New Anti-Submarine Devices. By this time two favorable developments greatly increased the safety of the convoys. The British and Canadians worked out a plan for an air umbrella all the way across the North Atlantic which enabled the submarines deadliest enemies to look down into the waters and swoop instantly on any U-boats which were at or near the surface. Many great land-based planes participated in this new patrol, but the main bur-den had to be borne by lesser planes issuing from small aircraft carriers, ships of cargo or cruiser size which could be converted more quickly than a huge "flat-top" can be built, and serve a convoy just as well.

Simultaneously, a new type of destroyer-escort was coming off the ways in increasing numbers, the first of 300 projected. The D E is a ship 300 feet long, larger and speedier than the corvette but easier and faster to build than the destroyer. Designed to resist air attack, its superstructure is something between a submarine conning tower and a tank turret, all sheathed in steel except a few small slits. These powerful sub-killers take only three months to build.

During April, losses to the U-boats were still rising. Scores of ships filled with all manner of val-uable cargo joined the thousands of others lying on the ocean floor, especially around the British Isles. There was no difficulty in finding a "market" for the goods we produced. But during May the new anti-sub weapons reduced the submarine toll to the smallest since the war began in 1939. Fully 95 per cent of our lend-lease materials were getso per cent or our tend-lease materials were getting through. During the last half of June 15 Uboats were accounted for, in addition to "probables." On July 16 a baby flat-top in port reported fights with 11 U-boats and recorded two as certainly sunk, four "very probably" and four "probably." On August 3, reports came in of a mass attack. tack by 25 submarines being so severely mauled by air and sea escort craft that it was never able to fire torpedoes at a great convoy. Our industrial supremacy was finally asserting itself in submarine fighting, as elsewhere.

The U-boats Mastered. By mid-August the sea war was going well. Shipping losses were moderate and U-boat sinkings heavy. Enemy submarines were destroyed at the rate of one a day for three months. Although 2,500 vessels had been used in the invasion of Sicily, only 80,000 tons of shipping were lost, or ten fair-sized ships. More enemy submarines were sunk during August than Allied vessels in convoys, a sure indication of the upper hand. In September, the U-boats were back, after re-fitting with heavier torpedoes and new antiaircraft guns, which sometimes enabled them to stay on the surface and fight it out with the planes, but they were not able to redress the balance of

armed power against them.

During the first half of September no Allied merchant ship was sunk anywhere in the world, and in the four months preceding September 18 no losses were incurred in the North Atlantic. The next day, however, at least 15 re-armed subs attacked a great convoy and sank a small number of merchant ships and three naval escorts. A larger number of U-boats was sunk or damaged during the fight, according to a statement by President Roosevelt and Prime Minister Churchill on October 9.

Azores Bases Gained. Three days later the last hope that the submarines might save the Nazis must have been removed when Portugal granted the Allies, at the request of the British, the use of the Azores islands as fighting bases. This diplomatic stroke enabled us to bridge the Atlantic with land based planes. Previously, there had been a gap of some 500 miles in mid-Atlantic, but therefiter ships steaming between the United States, Britain, and Gibraltar would be within reach of the big land patrol airships all the way. The vital oil route between Venezuela and Britain would also be similarly protected.

also be similarly protected.

Submarine Building Blasted. For a long time the Germans had been able to launch submarines faster than the Allies could sink them. Building and docking were frequently protected by "pens" with concrete roofs several feet thick. Nevertheless, our air raids reduced the building of submarines, both by direct attacks on the assembly plants and by blasting the factories where parts were made. At the peak of production it was estimated that the Germans could produce 25 subs a month, but by November 10 it was believed that their production rate had been cut in half. Since 150 submarines had been sunk in the preceding six months, at the rate of 25 a month, the total number of enemy subs appeared to be definitely diminishing. More were certainly being sunk than Allied ships lost, so that both the building and sinking curves were moving against the Germans. Yet the battle continued and the subs were able to put up a stiff fight against two convoys on Decem-

ber 12, with some losses on both sides.

The desperate nature of the war at sea was glimpsed momentarily, on November 11, by the story of the U.S. destroyer Borie which battled a disabled U-boat with pistols and shot guns, at tenfoot range, before both ships went down. A month earlier, British midget submarines had made a daring raid into Alten Fjord, Norway, heavily damaging the German battleship Tirpitz. Three of the

raiders did not return.

Shipbuilding Supremacy Achieved. Meanwhile, the other arm of the great Allied campaign against the U-boats, our shipyards, was striking home. In 1942 American shipyards managed to turn out an unbelievable total of 8,092,000 tons of cargo ships. That figure was exceeded in the first half of 1943 and by the end of the year we were building ships at the rate of 20,000,000 tons a year. This torrent of new vessels provided more ships for every theater, but above all it supplied the shipping pool to back the great invasion of Western Europe in early 1944, at the time when the elimination of the Italian navy and the opening of the Mediterranean greatly eased the strain on shipping. Under the leadership of a newcomer in shipbuilding, Henry J. Kaiser, the time required to complete a ship dropped from months to a very few weeks. One pre-fabricated ship was actually completed in 13 days.

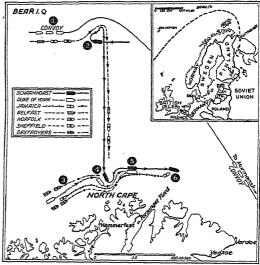

days.

Yet this is only part of the story of magnificent achievement in shipbuilding, for at the same time our yards were turning out during the year more than 350 warships of all types, enough to comprise a great navy and to indicate an American navy at the close of the war three times as large as Britain's mighty fleet, notwithstanding the fact that the British—no mean shipbuilders themselves—have added greatly to their navy. By agreement

the British have concentrated their yards on naval building, thus begetting a problem in the fair distribution of merchant shipping after the war.

As the year ended both nations resounded with the clang of steel as 80,000 landing barges were rushed to completion for the invasion of Europe. Yet the doom of Japan was not neglected. Huge battleships of 35,000 tons were launched and three 45,000-ton American airplane carriers were begun which would devote their extra space to greatly increased compartmentation, armor, and fire power. Heavier decks would bear bigger planes above an almost unsinkable hull defended by powerful antiaircraft guns. The New York Navy Yard also found time to recondition the 35,000-ton French battleship Richelieu to head the navy of the new France that was taking shape in Algiers. Looking again to the future, the Navy took over the 70-ton flying boat Mars, which spread its 200 foot wings for 32 hours and traveled 4,600 miles without refueling, indicating again the scope of air war in any world struggles which may follow this one.

The Scharnhorst Sunk. The waning fortunes of the German Navy were symbolized by the sinking of the 26,000-ton battle-cruiser Scharnhorst on De-

Courtesy of The New York Times

#### SINKING OF THE SCHARNHORST

At dawn of Dec. 26, 1943, as a convoy was steaming southeast of Bear Island (1) on its way to Murmansk the German battleship Scharnhorst appeared, making 28 knots toward the laden ships. The convoy was diverted northward and the escorting British cruisers Norfolk, Sheffield and Belfast opened fire. The Norfolk scored a hit and the Scharnhorst turned off northeastward (2). Later the enemy vessel tried to close in again, but was driven off and sped southward for the Norwegian coast, shadowed by the British ships. Meanwhile the battleship Duke of York, which with the cruiser Jamaica and four destroyers had been on guard against attacks on the convoy from northern Norway, moved up from the southwest (3). At 4:15 p.m. contact was made, with the Scharnhorst on the Duke's bow. The Duke swung southeastward to fire a broadside and delivered a telling blow (4). The Scharnhorst turned north, then east. The destroyers raced to get ahead of her and let go with a torpedo attack while the Duke closed in (5). With the enemy ship afire and nearly at a standstill the Jamaica torpedoed her and she went down sixty miles northeast of North Cape (6).

cember 26. This famous ship and her sister, the Gneisenau, had run the gauntlet of British might through the Straits of Dover in February, 1942, in order to threaten Allied convoys to Russia by the northern route. Finally the temptation of a great convoy brought out the Schamhorst, when other methods had failed. Three small British cruisers on the flank of the convoy gave battle as the mer-chantmen fled to the north. Then the convoy reformed again and the Scharnhorst made another try. This time she was driven back into the waiting guns of the British battleship Duke of York and finished off by torpedoes and bombs.

Pincers on Japan. Other warships could now be

detached to join the growing forces of Lord Mountbatten in the Indian Ocean, one arm of the great naval pincers pressing on Japan. The bulk of the new American Navy had long been in the Pacific, hoping for a battle with the main Japanese fleet, which was held back to defend the chief Japanese lines of communication. Instead of risking their heavy warships the Japanese fed cruisers and destroyers—protective cover for any battle fleet-into the path of MacArthur's airmen and task forces, losing ships steadily but hoping

to gain time.

Time might be won until Germany cracked, yet even before her final collapse armed power would begin to flow from Europe to the Pacific, said Admiral King on December 30, a prediction repeatedly buttressed by earlier British declarations that their whole power would be thrown against Japan when Germany was conquered.

The gambling looked good to the Japanese war lords on the day of Pearl Harbor, and it started off auspiciously. Little more could have been desired in the first two years, were it not for the steady whittling down of Japanese sea strength in the Southwest Pacific and by our submarines on all

Jap shipping routes.

If this account of the war in 1943 were written from Tokyo the latter campaign would be the epic of the piece, for American submarines steadily gnawed at Japan's vitals without her being able to smother them as we had the German undersea boats. By the end of 1943 nearly a thousand Japancse ships had been hit, most often by the torpedoes of American submarines whose activities were little known to their own people, except as occasional totals of enemy ships sunk were re-leased. Yet on September 14 only 12 U.S. subma-rines had been lost in a total of 114 American warships sunk in action since the war began.

Blockade Running. Another phase of the silent war at sea was brought momentarily to attention on December 27 when a German blockade runner neared the coast of southern France, presumably from the Far East. Her cargo must have been heavy with rubber, tungsten, quinine, and other riches in Japanese hands, for 11 German destroyers put out from Bordeaux to bring her in. Three were sunk by British warships and the others whiten healt before the carried in the others. driven back before the cargo ship was sunk from the air. She was the twelfth blockade runner to

be caught.

Unfortunately for the United Nations a safer channel of blockade running had been opened up through the facilitation of wheat shipments from Argentina to Spain by the British and Americans. This humanitarian traffic soon became established and broadened into other fields, constituting a ready channel for rare materials through Fascistcontrolled Argentina and Spain into Germany. Thus in early November, five ships on this run were examined by British blockade authorities

and found to contain drums full of liver extract for Nazi submarine crews, labeled as paste. Others contained six tons of gland extract for the treatment of shock and hidden platinum bars worth a king's ransom to the Germans as an ingredient of nitroglycerine.

#### THE AIR WAR

In the last week of December, 1943, there were celebrations of the 40th anniversary of the first air-plane flight by the Wright brothers at Kitty Hawk, N.C. Measured in years the airplane was very young, but its technical efficiency as a destructive weapon seemed to advance almost in geometric

proportions.

During the First World War the airplane was already a formidable fighting tool. It did some light bombing, but its main use was in observation. The planes used then seem incredibly fragile and ineffective when compared with the air giants of 1943, in speed, armor, fire power, and scientific dependability. The four-motored Flying Fortress bristling with 13 guns, some of them small cannon, knocked down fighters in all directions and had to be grievously hurt indeed before it fell to the ground. On July 18, a formation of Fortresses was attacked over Holland by 200 enemy fighters, 50 of which were shot down and only 2 Fortresses were lost.

The great British Lancasters, specializing on bomb power, carried single "block busters" weighing three tons, and four-ton bombs were also being used. Yet these types were already overshadowed by greater planes coming from U.S. assembly lines, which at the end of 1943 was turning out planes of all types at the rate of 9,000 a month, a figure due to rise to 10,000 in 1944, or 120,000

planes annually.

Contemplation of facts like these clearly indicated that another 40 years of "progress" in aviation would make war completely incompatible with urban civilization. Countless Europeans already know that to be true. In January, 1943, the R.A.F. was systematically demolishing the great industrial cities of the German Ruhr. Six times in nine nights the huge bombers rained many hundreds of tons down on the concentrated targets beneath them and they continued until the greatest industrial district in Germany was virtually destroyed, its factories and supporting establishments wrecked or moved to the east. Strategic bombing had already destroyed 30 per cent of Germany's plane production capacity, created bottlenecks in deliveries to all kinds of war plants and dislocated inter-plant communication in hundreds of factories, in addition to smashing factories and blasting salvage work. Allied air staffs usually allowed the Germans to get repairs well along before blasting them again.

In general, the British preferred night attacks, with heavier bomb loads, while U.S. planes were built for high-level day bombing, depending for accuracy on secret bomb sights which astounded friend and foe alike. The Eighth U.S. Air Force required many months to amass its forces in Britain. It was not until Jan. 27, 1943, that it assayed its first raids on the Reich, striking at Emden. Three days later the R.A.F. made its first daylight raid on Berlin, to disrupt the annual Nazi celebration of their advent to power. The flustered Goebbels hastily betook himself to the cellars and returned to the air an hour later, only to have to flee again as the second wave of British planes came over.

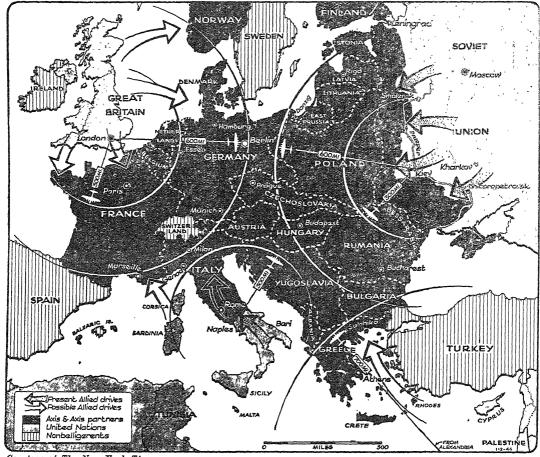

These complimentary raids were followed by the real thing at night on March 28 and 30. To make

life constantly uncertain for the enemy the British had developed Mosquito bombers, small planes made almost entirely of wood and plastics. They carried only small bombs, but could fly at low alti-

tudes and at great speed.

Bombing from Three Directions. The big R.A.F. bombers devastated Nuremberg on March 10 and fired Munich the next night. On April 5, 133 Flying Fortresses wrecked the great Renault truck and tank works near Paris and a similar armada attacked Naples from Africa, while the British dropped 900 tons of bombs on the Krupp plant in Essen and bombed both Kiel and Antwerp. Essen

three. The Russians raided Warsaw, our planes Northern France, and the British rocked Duisburg with the heaviest raid of the war-until May 25, when the R.A.F. loosed more than 2,000 tons on Dortmund, at the rate of 33 tons a minute for an hour. On the 16th a specially rehearsed attack was made on the Eder and Moehne dams which supplied power and water to many German industrial plants. A new explosive was successfully planted and the dams seriously breached. Duesseldorf, where 380 acres of buildings had already been destroyed, was bombed again on May 26, and two days later the Zeiss instrument works at

#### ALLIED ASSAULTS ON HITLER'S EUROPEAN FORTRESS

The map shows the Russian and Anglo-American drives under way at the end of 1943 and the possible offensives of 1944.

had now received 10,000 tons of high explosives. These wide sweeping attacks were extended on the 17th as Soviet bombers raided Koenigsburg, our forces smashed the Focke-Wulf plane plant at Bremen, and the R.A.F. raided both the Skoda arms plants at Pilsen, Czechoslovakia, and the chemical area at Mannheim on the upper Rhine. It was the year's heaviest raid for the British and their losses were 55 bombers, a real loss when the highly trained crews are considered, but still under 10 per cent. U.S. losses for the day raised the total to 71 big planes.

In the last half of May the pace of the air war

was sharply stepped up. On the 14th and 15th the Americans made four large raids and the British

Jena was hit by Mosquito bombers flying at 200foot heights. See DAMS.

Allied Superiority Established. By this time 100,000 tons of bombs had fallen on Germany and the Allied air war had greatly relieved the Russian air fighters. At the start of the German attack on Russia the Soviets had had to contend with 10,000 German planes, with 4,000 in reserve. Now 5,000 operating Nazi planes had to cover all Europe, enabling the Russians frequently to destroy three or four planes to one lost. Thus, on June 12, the Russians reported a bag of 752 planes to 212, over a period of several days, and airmen of the U.S. Eighth Air Force enjoyed a similar advantage. In 18 raids during the first half of the year

their bombers shot down 571 Nazi planes and recorded 187 others as probably destroyed and 231 damaged. The American loss was 106 planes. Maj. Gen. Ira C. Eaker, commander of the U.S. Air Force in Britain, reported that his air strength there had doubled in the second quarter and would double again in the third. The same rate of growth was also maintained in the last three months of the year as power was piled up for the great land assault on Western Europe.

To speed this key undertaking complete shore to shore air cover, either carrier borne or land based, was established across the North Atlantic for all convoys.

Cologne and Hamburg Destroyed. During mid-summer the air assault on Western Germany continued night and day. Good weather enabled huge loads of death to be dumped on Germany for eight nights straight during late June. Cologne was given a 2,000-ton blow on June 29 and on July 4 another attack left flames visible for 150 miles. Yet a great city dies slowly. For a long time anger at the damage powers the arms of the people who try to make repairs. It was necessary to drop 1,000 tons on Cologne again on July 9, to crush German attempts to revive a skeletonized industrial life. Previous raids totaling 118 had not been enough. However, as the later months of the year brought no respite for recovery, travelers reported the death of Cologne, and many another Rhineland city. Railroad traffic was still maintained through them but the will to rebuild what was constantly destroyed had been at last extinguished.

In late July, the killing of Hamburg, Germany's greatest seaport, was completed. On the 26th, the R.A.F. dropped 2,500 tons at night and the Eighth U.S.A.F. continued by day. Eight assaults were made in six days. Three of them exceeded 2,300 tons. One of the earlier assaults created such a tremendous fire that a gigantic pillar of flame ascended miles into the sky. The updraft it created was so powerful that it quickly exhausted every particle of oxygen in a large section of the city, dooming the inhabitants to instant death. Tens of thousands of people were cremated, in their air raid shelters or trying to get out of them, so completely that almost no trace of their ashes remained.

Then the follow-up attacks completed the work of demolition in other areas of Hamburg until that city was added to the list of the dead. Photographs showed nine square miles of the town razed, or 75 per cent of its area. Simultaneously, the great American raid on the Ploesti oil fields in Rumania, described above, struck another crippling blow at Germany's war-making power, and lesser raids fell on a dozen other targets in Germany. As the terrible news of the swift destruction of Hamburg moved across Germany with the refugees, in spite of all efforts to isolate the ruined city, panic swept Berlin and kept the Nazis frantically trying to control a mass exodus from the doom which the inhabitants of the capital knew was ahead for them.

Total War. It had not been planned this way when Goering assured the Germans at the start of the war that no hostile plane would ever darken German skies, and when some Americans who had been shown the Luftwaffe wrote off Britain as an air power completely and assured us that the German air force was unconquerable. The destruction of Germany's cities had not been planned when the German air force was hurled en masse at London and other cities in 1940, in an improvised air assault which almost smothered Britain but was turned back by those intrepid British airmen to

whom "so many had never owed so much to so few." When it looked as if the British might be crushed, the German radio had exulted and brushed aside all thoughts of humanitarian com-

The German air blitz upon Britain was total war, aimed at morale rather than strategic damage. When it failed, the scientific preparation of Germany's destruction began on the Allied side and it developed through miracles of technical improvement and scientific management of men and ma-terials until the killing of the hundred industrial centers of Germany had been carefully planned and about half of the task executed. It required 50 bomber airfields, each costing \$5,000,000, and requiring 640,000 square yards of deep concrete, to launch a 1,000 plane raid, and the labor of 120,000 men, half of them skilled specialists, to keep the 10,000 airmen able to fly. Real total war demands that the best organizing brains and scientific gains of a nation be employed until its

enemies have been rendered impotent.

The fascist-militarist elements in Germany which made war the whole business of life had not looked that far ahead. They had not anticipated U.S. Liberators flying 2,500 miles round trip from bases in Africa, on August 14, to aircraft factories south of Vienna, and blasting 400 new planes neatly parked in rows. They had not expected the shuttle bombing of Regensburg, in southeast Germany, on the 18th, by American planes flying on from Britain to North Africa, or that a secret research plant in a Baltic coast for-est would receive a 1,500-ton attack the next day. The inventors of total war had not visualized that on Aug. 19, 1943, 3,000 allied planes would smash 16 targets in Germany in 24 hours, including Berlin for the 71st time. No people is able really to believe that such things will happen to it in the next war of the air age, until the bombs begin to drop on their own cities.

The Razing of Berlin. In late August the serious business of flattening Berlin was well under way. At the Quebec Conference, on August 19, the British Minister of Information phrased the Allied purpose to "bomb and burn and ruthlessly destroy in every way available to us the people responsible for this war." Four days later 700 British and Canadian planes dropped 1,800 tons of bombs on Berlin, devastating four square miles. After that all schools closed, residents fled to the suburbs, and freight cars left the city packed with human cargo. On bad weather days British Mosquito bombers spurred the exodus. These were difficult times for the Nazi regime, but to its great relief the bombedout people generally rallied to it, believing—doubtless truly—that they would never be compensated for their losses unless Germany won the

At this stage the job of softening Germany from the air was believed to be half accomplished, with the second half likely to be achieved more rapidly as the cumulative effects of damage spread. Yet the German system of defense had become very formidable. A network of observers covered Europe itself. On occasion, too, as on August 28, the R.A.F. night raiders encountered great formations of night fighters which made the raid of that date on Nuremberg expensive but did not prevent the bombers from shooting their way through and delivering 1,500 tons of bombs and tens of thousands of incendiaries on the city. The railroad and industrial center of Nuremberg virtually ceased to exist. For war purposes the city in which the Nazis had massed to fulminate the death of Austria, Czechoslovakia, and Poland was gone. The mammoth structures in which the alleged master race had strutted its prowess could be left as melancholy reminders of the days when weak nations were

cheaply killed or enslaved.

The German defense stiffened. Dwindling resources went into fighter planes and anti-aircraft guns increased greatly in number. Nevertheless, the raiders came through. Few of their attacks were made on a straight line. New courses were carefully plotted for each raid, with due regard to German fighter bases and other factors. On the way to Berlin the vast waves of bombers sometimes flew southeast from Britain and then swung to the northeast. At other times they went over Denmark and came in from the Baltic Sea, crossing a different point on the German coast each night. When it was advisable, Mosquito planes slipped over Germany in advance to provide late weather information.

Against this kind of scientific attack backed by great industrial power the defense forces may be huge in extent and devoted in their effortsindeed millions of men must be used to man the defense—but the attack nevertheless comes and the damage is done, damage which cumulatively

saps the ability to go on.

Damage to German military morale was also probably cumulative as the troops learned that their families back home were in constant danger of the utmost gravity. At the front, too, the soldiers suffered from lack of air cover and blamed the Luftwaffe for not supplying it. This was quite successfully countered, however, by stories that the German planes were away bombing New York, tales accepted by the regimented minds of the Germans to such an extent that German prisoners passing through New York City expressed surprise that the place had been so quickly rebuilt.

Increasingly Heavy Attacks and Losses. The air war in the last quarter of the year was a story of new records in the weight of the attack on Germany, as planes piled up in Britain and the Mediterranean area. Sometimes a blanket of raiders covered many areas in France, hitting at canals, railways, and selected industrial targets. Most often perhaps, it was the industrial heart of a city which was selected. Frankfort on the Main burned for days after an attack on October 4, and was repeatedly assaulted thereafter. Once in a while the Germans hit back weakly, as when they deposited 30 tons of bombs on the London area on October 9, but the Germans were scarcely able to return a ton of bombs for each 200 received.

Occasionally, also, the Allies paid heavily in planes lost. A daylight raid on Germany's ballbearing plant at Schweinfurt, on October 14, cost 60 Flying Fortresses and 593 men, but Gen. H. H. Arnold declared the attack was worth the price. In London it was estimated that the loss of the plant would eventually cut German war produc-tion in half, especially since lesser ball-bearing plants in Europe were also bombed. Attacks on other key targets deep in Germany would bring us still heavier losses, warned Maj. Gen. Frederick

Anderson, Jr., on December 28.

The locomotive and aircraft city of Kassel was hit in force October 21. By November 4 the Eighth Air Force was able to send over 1,000 planes on single missions. The next day a new record was set when Duesseldorf and Wilhelms-haven received 4,000 tons in 24 hours. Likewise on the 18th, the Northwest Africa Air Forces celebrated their first birthday by attacking targets in France, Yugoslavia, and Greece. A little later the

Africa bombers penetrated to the Munich region and they frequently bombed the railroad towns on both sides of the Brenner pass. The airplane repair base at Kjeller, Norway, was destroyed November 19, as Berlin was hit by 350 block busters. Equally heavy attacks at three-day intervals kept the German capital burning for ten days as the R.A.F. bomber command revealed that it had set aside 50,000 tons of bombs with which to wipe Berlin off the map as a governmental and industrial city. In late November, 6,000 tons were dropped on the city in eight days, making 500,000 people homeless. A heavy attack on December 4 left fires visible for 200 miles, but a cloud of 500 German night fighters took a toll of 41 R.A.F. hombers.

Turning the tables, American bombers shot down 138 enemy fighters in a day raid on Emden, December 12. On the 17th it was revealed that the Germans had had a real inning at Bari in southern Italy where 30 of their bombers sank 17 allied ships in harbor and largely wrecked the port when two ammunition ships blew up. Meanwhile, Allied planes had staged repeated raids on

Emden, Leipzig, and many other German cities. On December 22 all tonnage records of bombs dropped on Germany were exceeded and this scale of attack was maintained until Christmas Eve. The number of attacking planes rose to 3,000, as the Allies sought to demolish possible rocket gun emplacements on the invasion coast and soften it further for the great invasion by land. On December 29 the raiding of Berlin was resumed in one of the heaviest attacks of the war. After it a Swedish correspondent wrote, graphically but probably prematurely: "We now live in a ruined

city in which there is nothing left to bomb."

By this time the Tehran Conference had settled finally the date of the grand invasion from Britain and the fact that air war alone was too slow a process to be depended on for victory. The land forces would have to deliver the final blow. See UNITED NATIONS for the commanders appointed to lead the Anglo-American invasion of Axis

Europe.

Toward Inter-Continental War. Yet as the year closed the constant expansion of air power, both quantitatively and qualitatively, indicated strongly that air war would play a still more terrible part in any Third World War. A method of bombing through thick clouds had just been worked outat heavy cost to residential areas, the Germans said. In the realm of the unquestionable the United States had made 134,000 military aircraft in the two years since Pearl Harbor, a figure which would be almost doubled in 1944. The great B-29 superbomber, so large that it would reduce the Flying Forts to the medium bomber class, was already in quantity production and training. Yet on December 23 the chairman of the House Military Affairs Committee announced that he had seen a still greater bomber than the B-29 giant in production, one designed especially for use against Japan.

The choice between abolishing war or being destroyed by it was rapidly becoming inescapable. The military campaigns are further analyzed in the articles on Aeronautics; Military Progress; and NAVAL PROGRESS. See also each of the belligerent countries and Alaska, Burma, Corsica, Ha-WAII, ICELAND, LIBYA, NETHERLANDS EAST INDIES, and TUNISIA, under History. LEGISLATION.

Officers. The Governor is Lester C. Hunt (Dem.), inaugurated in January, 1943, for a four-year term; Secretary of State, Mart T. Christensen; Attorney General, Louis J. Marr. See AQUEDUCTS; BENTON-

X-RAYS. See Physics under Hundred Million Volt X-Rays and Quantum of Energy; also, ELECTRICAL INDUSTRIES.

YACHTING. A wave of uncertainty threatened to wash over yachting in the spring of 1943. Hundreds of the larger craft had been taken over by the government, many skippers had entered the Navy or some other branch of the armed services and others were anchored to their desks by the pressure of business. But the sport's value in training men for the sea, and the fact that it required no materials essential to the national war effort, encouraged a few of our more "daring" yachts-men to go ahead with plans for limited racing and their optimism was greatly rewarded. Soon boats were put overboard along our three coast lines and on inland lakes with the result that yachtsmen (warned to avoid the shipping lanes) enjoyed a really good season.

Class championships on Long Island Sound attracted 1,265 starts, only two fewer than in 1942. Then there were several special and club regattas. Larchmont Race Week was cut to five days of racing, but had 546 starts in all. And international racing did not fade completely from the picture as fleet leaders of the Star Class visited Great South Bay and, with sailing boats loaned by local skippers, put on their annual title races. Nineteen crews competed, with Arthur M. Deacon of the Western Sound Fleet winning to give the

East victory for the first time in seven years.

On Long Island Sound, Arthur P. Davis took the International Class group title with his sloop Patricia while Arthur Knapp, Jr., led with Four Winds in the special series and was top scorer in that combined with the championship. John S. Sutphen, Jr., sailed his sloop Teal to Atlantic Class honors and Philip S. Patton was the Class S leader with Kandahar. Patton also captured the Herreshoff Trophy in a special series covering the season. Cornelius Shields won the Sparkman Trophy

in the International Class spring and fall races.
The Atlantic Coast Star Class laurels went to Horace Havemeyer, sailing the Gull, and Harold C. Halsted, in the Chuckle V, took the Corry Trophy for Stars in Great South Bay's Race Week. George May, Howard Seymour, W. O. Olsen, and T. S. Clark were victors during Manhasset Bay Race Week.

Ralph L. Evans, Jr., of M.I.T. sailed off to the intercollegiate championship, finishing first in the racing held off Marblehead, Mass., for the McMil-

lan Trophy.

THOMAS V. HANEY.

YAP. An island cluster in the western Caroline group of the Japanese Pacific Islands (q.v.). It comprises three main islands within a lagoon formed by an outer band of islets. Area, 83 square miles. Population (1938), 6,939 (5,811 natives, 1,119 Japanese, and 9 others). Yap and Palau are administrative centers for the western Carolines.

YEMEN. See under ARABIA.

YOUTH PROBLEMS. See CHILDREN'S BUREAU; JUVE-NILE DELINQUENCY.

YR-4. See Aeronautics under The Helicopter.

YUGOSLAVIA. A kingdom in the Balkans; occupied by German, Italian, Hungarian, and Bulgarian military forces in 1941. The capital was temporarily removed from Belgrade to London, England, on June 21, 1941, and to Cairo, Egypt, in 1943. Sovereign, Peter II, who was proclaimed King upon the assassination of his father, Alexander I, on Oct. 9, 1934, and who ruled through a regency until the anti-German revolt of Mar. 27, 1941, placed the royal prerogatives in his hands.

Area and Population. On Jan. 1, 1941, Yugoslavia had an area of 95,576 square miles and an esti-mated population of 15,920,000 (13,934,038 at the 1931 census). Four-fifths of the inhabitants were classified as rural. The autonomous Banovina (Province) of Croatia comprised 25,634 square miles and 4,403,199 inhabitants (Croatians, 3,325,-830). The 1931 census populations of the chief cities were: Belgrade, 266,849; Zagreb, capital of Croatia, 185,581; Subotica, 100,058; Ljubljana, capital of Slovenia, 79,056; Sarajevo, 78,173; Skoplje, 64,737; Novi Sad, 63,985.

The Partition. Following the invasion and occupation of Yugoslavia by the Axis Powers during Apr. 6-18, 1941, the kingdom was partitioned as follows. The Banovina of Croatia and adjoining areas were proclaimed on Apr. 10, 1941, a separate state under Italian protection (capital, Zagreb). According to Croat sources, the new State had an area of 39,500 square miles and a population of 6,663,000 on Dec. 31, 1941. On May 3, 1941, Italy annexed about 1,800 square miles of territory with 305,000 inhabitants from Slovenia, and on May 20, 1941, the Dalmatian coast of Yugoslavia and most of its Adriatic islands (about 2,500 square miles with 402,000 inhabitants) were incorporated in Italy.

Hungarian troops moved in on the heels of the invading Germans and occupied about 4,600 square miles of territory (with 1,026,000 inhabitants as of Oct. 10, 1941), comprising most of the districts of Backa and Banat ceded to Yugoslavia by Hungary in the Treaty of Trianon (June 4, 1920). Bulgaria occupied a large part of Yugoslav Mace-donia. Italy extended the boundaries of the puppet state of Albania eastward to include the Kossovo district of Yugoslavia (area about 2,200 square miles with 387,000 inhabitants in 1931), thus establishing a common frontier with Bulgaria. On July 12, 1941, an Italian-sponsored "constituent assembly" at Cetinje proclaimed the independence of Montenegro (area, about 3,783 square miles; population, 200,000) under Italian protection. Gerpopulation, 200,000 and constituent are cetting to the state of the st many annexed Northern Slovenia on Oct. 1, 1942. Serbia, reduced to approximately its 1912 boundaries of some 36,937 square miles, and part of the Banat remained under German military occupation. The occupationary authorities in Serbia controlled the civil administration through a puppet govern-ment headed by Gen. Milan Neditch, which was established Aug. 29, 1941. For changes during 1943, see below under History

Religion and Education. According to the 1931 census, there were 6,785,501 members of the Serbian Orthodox Church (48.70 per cent of the total population), 5,217,910 Roman Catholics (37.45 per cent), 1,561,166 Moslems (11.2 per cent), 231,-169 Protestants (1.66 per cent), 68,405 Jews (0.49 per cent), and 44,671 Greek Catholics (0.32 per cent). Primary education was compulsory and, in government schools, free. School enrollment in 1938-39 was: Elementary, 1,474,224; secondary,

177,034; university, 16,969.

Production. Four-fifths of the population normally engages in agriculture, and about 80 per cent of the cultivated area is devoted to cereals. Yields of the curivated area is devoted to cereals. Yields of the chief cereal crops in 1940 were (in metric tons): Corn, about 5,000,000; wheat, 1,900,000; barley, 200,000; rye, 200,000. Other important crops were (metric tons): Beet sugar, 108,000 (1939); tobacco, 15,400 (1939); hemp, 53,500 (1939); potatoes, 17,016,000 (1938). Plums and other fruit are widely grown. Livestock in 1939 included 4.224.595 cattle 10 153 798 sheep 1978 cluded 4,224,595 cattle, 10,153,798 sheep, 1,273,-359 horses, 19,475 mules, 1,866,141 goats, and 3,503,454 swine. Mineral output in 1940 was (metric tons): Lignite, 6,888,000; copper, smelter, 43,200; lead, smelter, 32,400; zinc, smelter, 6,000; bauxite, about 150,000; chromite, 60,000; iron ore, 600,000; pig iron, 60,000; manganese ore, 6,000; antimony, 3,350; aluminum, 2,300. There were 3,054 industrial enterprises in 1938 and their employees numbered about 400,000 in 1940. Leading industries included timber, textiles, milling, tanning, cement, leather goods, chemicals, steel,

brewing, and sugar refining.

Foreign Trade. The value of merchandise imports in 1940 was 6,018,000,000 dinars; exports, 6,680,-400,000. For distribution and character of 1939

trade, see YEAR BOOK for 1940.
Finance. Budget expenditure authorized for the 1940-41 fiscal year (ended March 31) was 14,-708,200,000 dinars, as against actual expenditures of 12,327,900,000 dinars in 1939–40. Public debt on Mar. 31, 1939, 24,620,000,000 dinars (internal, 10,420,000,000). The states which partitioned Yugoslavia signed an agreement in Berlin on July 22, 1942, apportioning the Yugoslav debt among them as follows: Croatia, 42 per cent; Serbia, 29 per cent; Italy, Hungary, and Bulgaria, 8 per cent each; and Germany, 5 per cent. This agreement stated the internal debt of Yugoslavia to be 30,-533,000,000 dinars. The average exchange rate of the dinar was \$0.0227 in 1939, \$0.0225 in 1940.

Transportation. There were 6,591 miles of railway in 1939 (6,000 miles operated by the state). Highways extended 26,534 miles (see ROADS AND STREETS). The Danube and other rivers are im-

portant traffic arteries.

Government. The Constitution of Sept. 3, 1931 proclaimed Yugoslavia a hereditary, constitutional monarchy. It vested executive power in the King, acting through a Ministry appointed by him and

not responsible to Parliament. Legislative power was shared by the King and Parliament. There was a Senate of 84 members, half elected and half appointed by the Crown for terms of six years. The Lower Chamber (Skupshtina) of 371 elective members was dissolved Aug. 26, 1939, and new elections were still pending when the German-Italian invasion occurred in 1941. The kingdom was subdivided administratively into nine banovinas (provinces), each under a governor (ban) appointed by the Crown. By a decree of Aug. 26 1939, the Banovina of Croatia (Hrvatska) obtained full autonomy in all purely provincial matters (see YEAR BOOK for 1939, p. 815), and it was agreed that similar powers were to be extended to other parts of the kingdom.

Upon the outbreak of World War II, the Regency headed by King Peter's uncle, Prince Paul, and the Cabinet adopted a policy of neutrality. On Mar. 25, 1941, Prince Paul and Premier Dragisha Cvetkovitch capitulated to strong German pressure and adhered to the German-Italian-Japanese military alliance. They received in return a German-Italian pledge to respect "the sovereignty and territorial integrity of Yugoslavia at all times, agreed to permit the shipment via Yugoslavia of German munitions and war materials destined for use against the Greeks. Opposition to this policy led to the military revolt of Mar. 27, 1941, which ousted the Regency and the Cvetkovitch Government. On March 28 King Peter was invested with the ruling powers and Gen. Dushan Simovitch, leader of the revolt, formed a new Government containing representatives of all the principal racial groups and political parties. The King and the Simovitch Government were driven into exile by the successful German-Italian invasion, beginning Apr. 6, 1941. A new coalition government headed by Dr. Slovodan Yovanovitch was formed Jan. 12, 1942. See below for developments during 1943. For Yugoslav war declarations, see table under World War.

#### HISTORY

Rise of the Partisans. The year 1943 was a momentous one in Yugoslav history. It saw the rise of a powerful new guerrilla resistance movement, the Yugoslav People's Army of Liberation, or Partisans, led by Josip Broz, a Croatian metal worker and Communist organizer more widely known as "Tito." Broz and his Partisans organized the most effective guerrilla movement in Europe. They made spectacular progress, considering the great difficulties involved, toward driving the Axis involved. vaders from Yugoslavia. They appeared to have supplanted Gen. Draja Mikhailovitch, War Minister of the Yugoslav Government-in-Exile, and his rival Chetnik guerrilla forces both in popularity at home and in the degree of material support accorded by Britain, the United States, and Russia.

In November Broz capped his sensational

achievements by setting up a provisional revolutionary government in opposition to the Yugoslav Government-in-Exile and making a bold bid to supersede King Peter's conservative monarchial regime. By the end of the year it was clear that a social and political revolution of sweeping proportions, deriving its main inspiration from the Soviet Union, was under way in war-torn Yugoslavia.

Background of Movement. The story of the origin and rise of the Partisan movement was told by C. L. Sulzberger of The New York Times in the Dec. 22, 1943, issue of that newspaper. According to this account, Broz began organizing the

movement in April, 1941, immediately after Germany and its allies invaded and occupied the kingdom. He had deserted from the Austrian army in Russia during the first World War, fought in a Yugoslav battalion with the Russians, became a Communist, and returned to Croatia in 1924 to organize the metal workers in the Zagreb railway shops. This led to his imprisonment for some years by King Alexander's illiberal regime. Upon his release he lived the life of a "political undesirable," in constant fear of arrest, until the Axis invasion.

Led by Yugoslav Communists under the direction of Broz, the Partisans launched their first attacks upon the occupationary forces on July 5, 1941, a short time after the German invasion of the Soviet Union. The Germans had withdrawn many garrison troops for service in Russia and the Partisan risings, like those led by General Mikhailovitch and other guerrilla leaders, attained early success. Partisan bands seized control of most of Montenegro immediately and recruits, most of them non-Communists, flocked to their banners from Croatia and Slovenia as well as from Serbia. Major Arbo Jovanovitch of the regular Yugoslav General Staff became Broz's Chief of Staff.

In October, 1941, Broz proposed a joint command for the Partisans and Mikhailovitch's Chetniks but the negotiations were broken off in November during a German attack upon the Partisan headquarters at Uzice, which inflicted the first of many setbacks upon the movement. The Chetnik and Partisan bands had already clashed on various occasions, and after the failure of the Broz-Mikhailovitch negotiations, the rival movements waged war upon each other as ferociously as upon the Axis occupationary forces. There was some evidence that elements among both Chetniks and Partisans on occasions assisted Axis forces, particularly the Italians, in attacks upon the rival guerrilla movements.

Driven from Uzice, Broz went to Foca in Bosnia and built up the Partisan movement until ousted by another German offensive in May, 1942. Time after time the Axis forces sought to round up and exterminate the Partisan bands. But despite heavy losses and intense suffering from hunger and cold, the Partisans broke out from each encirclement and by a series of successful guerrilla campaigns secured control over large sections of Slovenia, Croatia, Lordun, Lika, Gorski, Cattaro, west Bosnia, and Dalmatia by the end

of 1942

In November of that year, Broz convened an "anti-Fascist Assembly for the People's Liberation in Yugoslavia" at Bihac in northern Bosnia, where temporary executive and legislative organs were created to govern the liberated areas. Dr. Ivan Ribar, former president of the Yugoslav Chamber of Deputies, was named head of a political executive committee. No attempt was made at that time to assume supreme governmental powers. At the same time the Partisan guerrilla detachments were organized on a formal basis as the "People's Army of Liberation."

The basis of the Partisan movement—the unity

The basis of the Partisan movement—the unity and equality of all Yugoslav peoples—was formally incorporated in the political and military set-ups created at Bihac. According to various indications, the refusal of Mikhailovitch and of Serb nationalist elements in the Government-in-Exile to accept the principle of federation on the basis of equality of all Yugoslav peoples was a basic cause of continued political strife and civil warfare. The Serb nationalists were unwilling to for-

give the betrayal of Yugoslavia by some Croat elements at the time of the German invasion and the subsequent large-scale massacres of Serbs by Croats collaborating with Ante Pavelitch's pro-Axis puppet regime at Zagreb (see 1942 and 1943 Year Books).

Partisan Gains in 1943. Early in 1943 another offensive by German and allied Axis forces drove Broz and five of his best divisions southward from the Bihac area into Montenegro under constant land and air attacks. After a brief pause the Germans renewed their attempt to wipe out the main Partisan concentration in Montenegro in May with seven German and five Italian divisions in addition to Croat Ustachi forces. A British military mission parachuted down to join Broz on May 27 in the midst of the fighting, which lasted for 40 days. Again Broz led his hard-fighting units out of the Axis trap, driving northwestward into Bosnia and establishing a new headquarters at Jajce in Luke

in July.

The Partisans received a respite from German attacks and a great opportunity to expand their strength through the Anglo-American invasion of Sicily and the Italian mainland, the overthrow of Mussolini, and the capitulation of the Badoglio Government. The Germans were forced to spread their forces in the Balkans thin in taking over control of areas formerly under Italian occupation. Broz and his followers seized the opportunity to disarm many of the Italian divisions and to launch new offensives with fresh divisions equipped with captured Italian arms and supplies.

Sections of the Dalmatian coast were liberated temporarily, opening a way for the shipment of British and American supplies to the Partisans from southern Italy. There was a mass revolt against the Axis in Slovenia and local forces joined the Partisans in attacks upon Trieste, the seizure of Fiume, and other invasions of Italian, Austrian, and Hungarian territory. However the action of the Partisans in establishing their own administration in newly liberated territories led to renewed clashes with General Mikhailovitch's Chetniks, who were likewise on the offensive against the Germans.

The Germans reacted strongly against the Yugoslav guerrillas during the last months of the year. They rushed reinforcements to the Balkans, restored control over most of the Dalmatian coast, and began a series of heavy offensives against both Partisan and Chetnik-controlled areas in the interior. On December 14 the Free Yugoslavia (Partisan) radio broadcasting station reported that Broz's forces were engaged in the heaviest defensive fighting since they began guerrilla activities against the Germans. The military situation at the year's end was vague. Berlin claimed that the sixth major offensive against the Partisans had "thoroughly liquidated" their activities in Bosnia, Montenegro, and Albania, while communiqués broadcast by Broz claimed that his forces were on the offensive in Hercegovina, Montenegro, and parts of Bosnia, and were registering successes elsewhere.

During the last quarter of the year the Partisans received considerable quantities of technical equipment and medical supplies as well as arms from the Allied forces in Italy. The guerrillas also were aided by repeated Allied air and sea attacks upon German-held bases in Yugoslavia. On December 20 it was announced from Cairo that a Partisan military mission had arrived in Alexandria in search of additional equipment from the Allies and to discuss future military operations.

The mission was accompanied by Brig. Fitzroy H. R. MacLean, British chief of the Allied liaison

mission to Broz's headquarters.

Partisan Regime Established. Meanwhile Broz had seized the opportunity presented by the events of September and after to establish a provisional government. According to Partisan sources, "popular elections" were held in Partisan-controlled districts near the end of September. Delegates chosen included 572 representatives from Slovenia and 96 from other parts of Yugoslavia. These delegates reportedly met in the first Partisan Assembly on October 1–3, at which a plenary committee of 120 members was selected. From the latter committee, 40 members were chosen to serve as the Yugoslav Anti-Fascist Council, or executive arm of the Partisan movement.

This temporary organization was proclaimed the provisional government of Yugoslavia at a meeting of 142 delegates held late in November at Jajce. According to the somewhat conflicting reports issued concerning the new government, it was organized along Soviet lines, with a presidium (plenary legislative committee) of 67 members headed by Ivan Ribar, Sr., a prominent Croat lawyer, and an executive committee or cabinet (the Anti-Fascist Council) headed by Broz, who also became Minister of War and chief of a new Council of Defense. Broz also retained his post as Commander in Chief of the Partisan armed forces and was formally invested with the title of Marshal.

Other members of the government were: Vice Presidents of the Presidium, Josip Rus, a Slovene and former High Court judge in Ljubljana, Dr. Mosa Pidje, Serbian Jewish physician and Communist leader, and Ivan Augustinitch, a sculptor from Zagreb; Minister of Foreign Affairs, Dr. Josip Smodlaka, a lawyer and former Yugoslav Senator from Spalato, Dalmatia; Minister of Interior, Vlado Zecevitch, an Orthodox priest from central Serbia; Minister of Reconstruction, Rade Pribicevitch, Serbian lawyer from Croatia; Minister of Forestry and Mines, Sulejman Filipovitch, a Bosnian Moslem; vice chairmen of tha National Defense Council, Vlado Ribnikar, former publisher of the Belgrade newspaper Politika, and Bozidar Magovas, editor of the Croatian Peasant party journal. The composition of the Partisan governmental organs indicated that the movement drew its support from all sections of the population. Yet it apparently lacked the support of Dr. Vladimir Matchek, leader of the Croatian Peasant party, as well as of the other prewar political parties.

In a statement of policy adopted on November 29, the new government pledged itself to establish a democratic Federal state after the war and reserved the right to review all treaties and commitments made by the Yugoslav Government-in-Exile. It declared it would not recognize any future obligations assumed by King Peter's Government and formally requested the Allied powers to grant it recognition as the legal government of Yugoslavia in place of the King and his emigree

Government.

The only reply to this demand for diplomatic recognition up to the end of 1943 was Moscow's announcement that a Russian military mission would be sent to Broz's headquarters, thus placing the Soviet Union on the same basis there as the United States and Great Britain. The Partisan regime on December 9 also announced its decision to ask lend-lease aid in carrying on its fight against the Axis and to seek representation on the Allied Advisory Commission for Mediterranean Affairs.

A further development of the Partisan governmental set-up came December 20 with Marshal Broz's announcement that "the Supreme Anti-Fascist Council of Yugoslavia has set up a National Committee of Liberation that now becomes the supreme legislative body of Yugoslavia, with all powers of the national government, through which the Anti-Fascist Council will discharge its executive functions." He added that his provisional government repudiated King Peter and would henceforth assert its claim to be the sole government of Yugoslavia.

In a manifesto issued December 22, the Broz regime ordered the Government-in-Exile deprived of all rights and "forbade" King Peter to return to Yugoslavia until after its liberation. Broz also demanded the trial of Mikhailovitch, whom he accused of conspiring with Axis forces to destroy the Partisans. It was noted that toward the end of 1943 Broz stressed the important role of the Communists in organizing the Partisan movement whereas the Communist participation had previously been played down. Although the Partisans received their major aid from the British and Amercans, they placed major stress upon their close ties with the Soviet Union.

Mikhailovitch Policies. Throughout this period while the Partisans were consolidating their position, General Mikhailovitch and his supporters dismissed Broz and his followers as Communist "impostors." Mikhailovitch supporters asserted the Partisans claimed credit for many of the achievements of the Chetnik forces. They charged that Broz established his Jajce government to present the Yugoslav people with a fait accompli and prevent them from determining their future form of government by democratic methods after the war.

It was admitted by Mikhailovitch and the Yugoslav Government-in-Exile that the Chetniks had not engaged in all-out open warfare with the Axis forces during 1942 and the first half of 1943. Mikhailovitch repeatedly announced that he was prepared to mobilize over 200,000 well-trained troops whenever the Allies landed. But he insisted that to launch a major offensive before an Allied landing would be suicidal for his outnumbered forces and provoke the useless slaughter of many more thousands of Serb hostages. He repeatedly denied Partisan charges that he and his supporters had collaborated with Axis forces against the guerrillas under Broz.

In response to growing criticism of Mikhailovitch's relative inaction, King Peter in September wrote him a personal letter urging him to institute more active operations against the Germans and ordering the Chetnik forces to avoid conflict with the Partisans except in case of a Partisan attack. This order was apparently obeyed. In mid-October Chetnik offensives were reported to have considerably enlarged the territories under the control of Mikhailovitch. However the extent of the Chetnik territories and the number of Mikhailovitch troops actually under arms remained uncertain

troops actually under arms remained uncertain.

Mikhailovitch met the challenge implied in the establishment of the Partisan Government by issuing early in December an order for all guerrilla forces in Yugoslavia to submit themselves to his authority. On December 15 he charged that Marshal Broz's activities "aimed at establishing a dictatorship of a minority" and had led to the "terrible annihilation of the Yugoslav population."

Allies Support Broz. During the first half of 1943

Allies Support Broz. During the first half of 1943 the British continued to lend their sole support to Mikhailovitch and the Yugoslav Government-

in-Exile while Russian diplomatic support went entirely to the Partisans. This divergence of policy between two of the great Allied powers threatened to impair the solidarity of the United Nations. However the sending of a British military mission to the Partisan headquarters in May was followed during the latter half of the year by a gradual shift of British policy toward greater sup-

port of the Broz movement.

At first the British sent aid equally to both the Chetniks and Partisans, but on December 8 a British Government spokesman admitted that more British aid was going to the Partisans than to their rivals "for the simple reason that the resistance of the Partisan forces to the Germans is very much greater." This significant development followed a radio broadcast by Gen. Sir Henry Maitland Wilson, Allied Commander in Chief in the Middle East, warning all Yugoslav Chetniks collaborating with the Germans that they would henceforth be regarded as traitors unless they immediately deserted the Nazi cause. The Yugoslav Governmentin-Exile on November 11 disavowed some Chetniks fighting with the Germans against the Partisans who called themselves "soldiers of King Peter." As for the U.S. Government, Secretary Hull announced on December 9 that it would continue to aid both the Partisans and the Mikhailovitch forces, leaving the matter of Yugoslavia's future government to the choice of the Yugoslav people.

The Government-in-Exile. The trend of Anglo-American policy toward greater support of the Partisans aroused bitter criticism among supporters of Mikhailovitch and the monarchy, who had defied German might in 1941 at such great cost to the kingdom. Nevertheless a major share of the responsibility for this state of affairs rested upon the Yugoslav Government-in-Exile, which proved unable to unite upon a political program that would rally the entire country behind the King

and his Ministers.

At the bottom of this factionalism was the resistance of Croat and Slovene members of the regime to the restoration of Serb predominance, against which the other Yugoslav peoples had rebelled throughout the prewar years. The Croat and Slovene members demanded a formal pledge that upon its return to Yugoslavia the Government would proceed to put into effect the program for a federal, democratic constitution, assuring social and political equality for all Yugoslav minority peoples, agreed to before the German attack of 1941. Serb nationalist members were unwilling to give such a pledge.

As described in the 1943 YEAR BOOK, the appointment of a Serb nationalist as Ambassador to Washington had led to the resignation of the entire Cabinet on Dec. 29, 1942. Premier Slobodan Yovanovitch formed a new and smaller Government of the company of the co ment on Jan. 2, 1943, taking over personally the duties of Foreign Minister relinquished by Dr. Momcilo Nincitch. In this and all subsequent reorganizations of the Government during the year Mikhailovitch retained his post as Minister of

War.

With British aid, the reformed Yovanovitch Government undertook negotiations with Moscow to attempt to end the Partisan-Chetnik friction in Yugoslavia. However King Peter and the Government supported their War Minister's policy of conserving his forces until Allied troops landed in the Balkans. On March 27, anniversary of the 1941 coup that overthrew Prince Paul's pro-Axis regime, King Peter broadcast a warning to his

people against premature revolt against the Axis. He also urged his subjects to rally around Mikhailovitch.

The Yovanovitch Government was forced to resign on June 17 and after a week-long crisis a new Ministry was formed June 26 with Milos Trifunovitch, deputy leader of the Serb Radical party, as Premier and Minister of Interior. The new Premier accepted the responsibility of introducing a federal, democratic constitution after the war, but within 36 hours of the Cabinet's formation one of the non-Serb Ministers resigned on the ground that he had no confidence that this guarantee would be observed.

Another cause of Cabinet dissension arose from the young King Peter's desire to wed Princess Alexandra of Greece immediately. They had been engaged unofficially for more than a year. Some members of the Cabinet held the King should not marry until the enemy was driven from Yugoslav soil, while others favored the wedding. The permission which the King had asked for in May was finally forthcoming on July 31 when Premier Trifunovitch officially announced the engagement. However opposition to an immediate wedding induced the King to postpone it.

Pouritch Cabinet Formed. On June 28 Peter broadcast a pledge that after the liberation of Yugoslavia he would make it possible for the Yugoslav people "to decide on their own fate in conformity with the principles of democracy." However the Serb and Croat members of the Government proved unable to agree upon the text of a statement outlining the regime's postwar policy. Talk of moving the Government to Cairo brought this issue to a head once more. On August 10 the Trifunovitch Government resigned and a new Ministry was formed immediately under Dr. Bozidar Pouritch, a well-known Serb diplomat. Composed of former diplomats and lesser officials, it was designed to allay the Serb-Croat friction.

The Government-in-Exile and King Peter moved their headquarters from London to Cairo at the end of September. In several statements issued immediately thereafter Peter indicated for the first time that his Government was making no distinction between Partisans and Chetniks and was striving to bring them into active cooperation. In broadcasts to his kingdom, the King called upon the guerrilla factions to refrain from internal struggles and unite against the Axis. On October 16 the Cabinet was broadened by the inclusion of two Croat and one Slovene members. Two of the new members had recently escaped from Yugoslavia after fighting in the resistance cause. The King also drafted the former ban (governor) of Croatia, who opposed the policies of the Serb nationalists dominating the Government-in-Exile, to serve as Yugoslav representative on the Allied Advisory Council for Italy.

Peter's efforts to reconcile the hostile factions in Yugoslavia and among his own supporters received a sharp setback as a result of the establishment of Broz's rival Partisan regime at the end of November. In an official statement issued December 5, the information office of the Government-in-Exile charged "Allied institutions" with stimulating the Partisan movement, which the state-ment denounced as one "of terroristic violence." This sharp statement provoked further discord within the ranks of the King's supporters and between the Allies and the Government-in-Exile. One of the new Croat Ministers resigned on December 8 after demanding enlargement of the Cabinet. At the same time a delegation from Slovene units of the Free Yugoslav Army forming under the Government's auspices in the Middle East announced their refusal to fight under Mikhailovitch, although they said they would be happy to fight for the King. The resignation of Gen. Peter Zivkovitch, Commander in Chief of Yugoslav forces in the Middle East, followed on December 24.

The year ended with the Government-in-Exile holding firmly to its course. In a statement issued December 23 it denounced the Partisan political maneuvers as the work of imposters and affirmed the determination of the forces under Mikhailovitch to fight at the side of the Allies until the end

of the war.

Claims on Italy. Despite its factional difficulties, the Government-in-Exile demanded representation in the Allied peace negotiations with Italy. It also put forward claims for the following Italian territories: (1) the entire peninsula of Istria, (2) the Cherso and Lussin islands in the northem Adriatic, (3) the port of Fiume, which Italy seized in 1924, (4) a strip of territory adjoining the prewar Yugoslav boundary and including the region from Trieste northward to Gorizia and Tarvis, and (5) the port of Zara on the Adriatic coast, annexed by Italy along with the Cherso and Lussin islands in 1920. Like the Greek and Ethiopian governments, the Yugoslav Government-in-Exile accepted with extreme reluctance the decision of the chief Allied powers to accept the Badoglio Government as a co-belligerent.

German Rule in Yugoslavia. In the German-occupied regions of Yugoslavia and in that part of Serbia controlled by the Germans through the Serb puppet government of Gen. Milan Neditch the plight of the population was reported worse than in any of the other German-occupied countries of Europe except possibly Poland and the occupied districts of Russia. The country was systematically looted of foodstuffs, minerals and other war supplies. Every act of active or passive resistance was punished by wholesale execution of

hostages.

On January 29 General Bader, commander of the German occupying forces, threatened mass reprisals against the people of four Serbian districts if any general outbreak occurred in Yugoslavia. He carried out his threat to shoot 100 Serbs for every act of sabotage. There were continuous arrests and summary executions of persons suspected of aiding or sympathizing with any of the anti-German guerrilla forces. The ferocity of the German repressive measures led General Mikhailovitch on February 6 to appeal to the Allies to "stop the flow of blood and the mass murder of Serbs." He declared that nearly a million Serbs had been slaughtered by the Germans and their collaborators.

The Government-in-Exile reported March 12 that 1,250 Serb hostages had been slain in two recent massacres in Belgrade alone. Similar mass killings were reported from other towns and cities. Conscription of every able-bodied person in the kingdom for labor service was announced late in March in connection with the German mobilization program for Axis Europe. An estimate of the Yugoslav population losses made by two Yugoslav officers who escaped to Cairo in July ran as follows: One million dead in Croatia, most of them victims of the Croat Ustachi and other agencies of the Pavelitch regime; 100,000 killed in the Hungarian-occupied areas; 40,000 lost in the short war against the Axis invaders; an additional 10,000 civilians killed in the German bombing of

Belgrade; at least 150,000 executed by the Germans. There were also an estimated 20,000 Yugoslavs in concentration camps and 200,000 in prisoner of war camps. In attempting to stamp out the spreading guerrilla activities toward the end of 1943, the Germans resorted to even harsher repressive measures.

The people of Slovenia and other Italian-occupied areas suffered almost to the same degree before the Italians dropped out of the conflict. German occupation authorities in Montenegro in December reported that 20,000 houses, or about half of all private and state-owned property, had been destroyed and some 40,000 persons killed

since the occupation began.

Situation in Croatia. Croatia continued in a state of open rebellion after more than two years of strong-arm rule by Pavelitch and his Axis allies. There the fierce racial war continued between Serbs and Croats except within the regions under Partisan control. German occupation of that part of the puppet Croatian state south of the River Save was announced late in February due to in-

creased guerrilla activity.

In addition to the resistance movement, Pavelitch continued to experience difficulty with members of his pro-Axis and anti-Serb regime. He ousted his Foreign Minister, Mladen Lorkovitch, in April shortly before visiting Hitler's headquarters for further instructions. A purge of numerous other leaders of the Croat Fascist party was reported from London on May 10. On September 10 Pavelitch was said to have formally ousted the Duke of Spoleto, nephew of King Victor Emmanuel of Italy, from the Croatian "throne" bestowed upon the Duke by Mussolini in 1941 and which he never deigned to fill. Croat guerrillas reportedly convened an anti-Pavelitch assembly at Otocac on June 13 and elected the poet, Vladimir Nazor, as their president.

The Yugoslav information office of the Government-in-Exile at Cairo on November 26 announced without confirmation that General Mikhailovitch had reached an agreement for cooperation with the Croat Peasant party leader, Vladimir Matchek. Matchek, whose organization was said to be still a potentially strong political and moral force in Croatia, was allegedly confined to his residence but able to maintain contact with his

followers.

See Bulgaria, Great Britain, Greece, Hungary, and Italy, under *History*; World War under *The Balkans*.

YUKON. A territory in northwestern Canada. Area, 207,076 square miles, including 1,730 square miles of fresh water. Population (1941 census), 4,914 (3,153 male; 1,761 female), comprising, by racial origin, British Isles races 1,966, Indian and Eskimo 1,508, Scandinavian 374, French 306, German 131, etc. Chief towns: Dawson (capital) 1,043 inhabitants in 1941. Whitehorse 754

1,305, Scandinavian 5/4, French 305, German 131, etc. Chief towns: Dawson (capital) 1,043 inhabitants in 1941, Whitehorse 754.

Production. Mining is the chief industry, the output for 1942 being valued at \$3,301,414 (gold, 79,058 fine oz., accounted for \$3,043,733 and silver, 506,002 fine oz., for \$210,143). Tungsten, lead, copper, and coal are mined. The principal forest trees are the balsam, spruce (white and black), poplar, cottonwood, and birch. Fur output (1941–42): 66,700 pelts valued at \$398,132. The Alaska Highway (British Columbia to Alaska) passes through the southern part of the territory. A new road from Haines, Alaska, to a point on the Alaska Highway 100 miles to the west of Whitehorse was under construction in 1943. There

are 58 miles of railway, and several landing fields for aircraft. The Yukon River (1,437 miles long) is an important means of communication from the coast to the interior.

Finance. For the fiscal year ended Mar. 31, 1943, revenue and expenditure amounted to \$1,106,189

and \$3,793,774, respectively.

Government. The Yukon is governed by a controller and a territorial council of three elected members. In the House of Commons of the Dominion Parliament at Ottawa the territory is represented by one elected member. Controller, G. A.

Jeckell (app. June 30, 1932).

History. Terms were made public on Nov. 19, 1943, of the United States—Canada agreement (letters of June 27 and 29 and Aug. 14, 1943) known as the "Canol" project which called for the delivery of 3,000 barrels of oil daily from the wells near Norman, Northwest Territories, to the armed forces of the United States in Alaska, and for the disposal of the properties after the war. The plans specified the drilling of new wells in the Norman field and the storage of all gasoline produced by the refinery there during 1942; the construction of a pipeline, 550 to 650 miles in length from the Norman wells to Whitehorse, Yukon, to be completed in January, 1944; the construction of a refinery in Whitehorse, to be completed by May, 1944; and the construction of a pipeline, 100 miles in length (in operation during 1943), from Whitehorse to Skagway, Alaska, with storage and landing facilities at Prince Rupert, British Columbia. Late in November, 1943, the U.S. Under Secretary of War, Mr. Patterson, revealed that the yield of oil from the Norman field had already passed the estimate and an output of 20,000 barrels a day was assured from the already uncovered pool estimated at 50 to 100 million barrels. See Alaska and Canada under History.

ZANZIBAR. A British protectorate in East Africa, comprising the islands of Zanzibar (640 sq. mi.) and Pemba (380 sq. mi.). Total area, 1,020 square miles. Population (1931 census), 235,428 (Zanzibar, 137,741; Pemba, 97,687). Capital, Zanzibar, 45,276 inhabitants. Cloves, copra, sesame oil, and tobacco are the main products. Trade (1941): imports £1,041,000 (cotton textiles £159,000, rice £150,000); exports £1,551,000 (cloves £1,063,-000, copra £80,000, clove and stem oil £91,000). Shipping dealt with in 1941 (ocean-going and coastwise): 218 vessels aggregating 572,820 tons net. Roads (1941): 243 miles.

Government. Budget estimates (1943): revenue £443,391; expenditure £483,213. In 1942 actual revenue and expenditure amounted to £549,-103 and £483,765, respectively. The nominal ruler is the Sultan. A British Resident administers the government. There is an executive council over which the Sultan presides, and a legislative council of 15 members including the British Resident as president. Sultan, Seyyid Sir Khalifa bin Harub (succeeded Dec. 9, 1911); British Resident, Sir Henry G. Pilling (app. Dec. 23, 1940).

ZENITH CAMERA. See PHOTOGRAPHY. ZERO, SUPER ZERO. See AERONAUTICS under Axis Types.

ZINC. Zinc, which during 1942 and the early part of 1943 was classed by the War Production Board as one of the most critical metals, by the end of the latter year had become sufficiently abundant to meet all war and essential civilian requirements.

Early in 1943, the WPB, acting through the

Metals Reserve Co., provided an incentive to mine operators to open up marginal high-cost ore deposits by expanding the Premium Price Plan. In February, 1942, this plan had provided bonus payment of 2\% cents per lb. over the OPA industrial ceiling of 8.25 cents per lb. for zinc production by each mine above a quota based on 1941 production. For 1943, it was announced that as much as 8.25 cents per lb. would be paid for above-quota production provided this amount was necessary to meet high production cost. Thus, as much as 16½ cents per lb.—double the market price—was paid for some domestic zinc production by means of government subsidy although the output of most mines was paid for at a far smaller figure. Because the zinc supply had become more abundant it was announced Oct. 27, 1943, that the additional premiums set up earlier in the year would be denied to mines not already operating and to those "having a low labor productivity and located in areas in which there is a serious labor shortage." As a result of the bonus offers, however, many old mines were resuscitated and many new ones developed during the year.

Mine production of recoverable zinc in the United States was 740,587 short tons in 1943, a decrease of 27,438 tons from the output recorded in

More than a quarter of domestic mine production was contributed by the Tri-State region (Oklahoma, Kansas, southwestern Missouri), although ore reserves in that area were fast dwindling. The Coeur d'Alene district of Idaho, which had been counted on to replace the faltering Tri-State mines, was hard hit by labor shortage. About a quarter of domestic production came from New Jersey, New York, Tennessee, and Virginia, and a corresponding amount was mined in Montana, Washington, New Mexico, Colorado, Arizona, Utah, and Nevada. Wisconsin and Illinois also contributed. A slag furning plant at Kellogg, Idaho, helped over-all production, and furning plants at Tooele, Utah, and East Helena, Mont., also were sizable producers. Vessels returning from South Pacific war zones in need of ballast made it possible steadily to continue imports from Australia, and Mexico, Peru, Argentina, and Canada all shipped ore to the United States for smelting.

For the second successive year smelters had difficulty in handling concentrates as fast as they were received, and by November stockpiles of two smelters in Texas and one in New Jersey had grown so unwieldy as to make it necessary for the Metals Reserve Co. to purchase a half interest in the piles.

More than 50 per cent of zinc consumption was for the production of brass and bronze and requirements for these alloys were the controlling factors in zinc demand. Galvanizing, the leading peace time use for zinc, and die-casting were

other important consumers

Slab zinc production in 1943 was 989,700 tons. compared to 945,067 tons in 1942. Slab zinc stocks at reduction plants were 170,700 tons at the end of 1943. This figure includes production from all sources—domestic and foreign ores and redistilled secondary from scrap.

See LEAD; NEWSPAPERS.

ZIONISM. See ARABIA, EGYPT, and PALESTINE under History; JEWISH ORGANIZATIONS listed under Societies.

ZONING LAWS. See FLOOD CONTROL. ZOOT-SUIT RIOTS. See MEXICO under History.

# GLOSSARY

# OF IMPORTANT NEW WORDS AND WORDS IN THE NEWS

(Compiled and prepared by HAROLD WARD, with the assistance of many Contributing Editors).

actinomycin. A new and very deadly rodent killer substance extracted from a soil bacterium known

as Actinomyces.

aerobiology. The study and investigation of the ways in which minute forms of life-as bacteria, pollen, and viruses—are transported by or through the air, with particular reference to the

problems of disease, health, and hygiene.

Aerocomet. Name officially adopted by British and
American authorities for the new jet propulsion

airplane.

geropolitics. The politics of air power; the analysis and formulation of national policies, domestic and foreign, in terms of the control of airways, the development of aeronautics, and the operation of air transport systems both in peace and war.

aerosol bomb. A device filled with insecticides released and atomized under high pressure. See INSECT PESTS AND PLANT QUARANTINES.

Alpa Reflex. A new miniature precision camera using 35-millimeter film, having a coupled range finder and the feature of reflex viewing. Probably a Swiss patent. See Photography.

amplidyne. An electromagnetic device consisting of a short circuit with a coil of the compensating field winding type. It is used for the control of powerful electric machinery, artillery, airplane

anglohelvetium. Proposed name for the radio-active element of atomic number 85, whose discovery under the name alabamine was reported in 1931. First prepared from radium in 1940 by Dr. Walter Minder and Mrs. Alice Leigh-Smith, of the Radium Institute of Bern. The new element, then called helvetium, was renamed in 1943, after development of a new method for iso-

area target. A bombing target, usually for night-flying military planes with heavy bomb\_loads, selected for the general demolition or effective disruption of a relatively large area. Compare

precision target.

arwrology (ar-roor-ology). The science and art of all-out hand-to-hand fighting. A recent develop-ment of kudo, jiu-jitsu, and similar techniques of self-defense, it combines a highly specialized knowledge of anatomy and neuro-muscular reflexes with speed, accuracy, and resourcefulness in the use of physical methods. [Derived from Welsh arwr, hero]

assault service mask. A new type of gas mask for use in battle. Developed as a protection against all known war gases, its air-purifying canister fits snugly to the left cheek of the facepiece. Weighs less than three pounds, and will float in water.

A.T.C. Air Transport Command, the U.S. Army or-

ganization which supervises and controls all air transport of persons and goods to any part of the world.

audio scale. An instrument, operating on the airplane radio beam principle; by emitting audible signals within the required limits it enables blind people accurately to weigh small articles. Developed by Laurence Williams, engineer of the Toledo Scale Co.

autoejector. An apparatus, chiefly an artificial heart and an artificial lung, used by the Soviet physi-ologist, Dr. Serge Bryukhonenko, in the resuscitation of dead dogs.

B2H2 Measure. The Senate Ball-Burton-Hatch-Hill measure proposing a postwar international organization. See United States under Postwar Policy Issues.

ball turret. A retractable armored gun turret of roughly spherical shape which can quickly be lowered to fighting position under the belly of a bombing plane.

Bancor. Proposed name for an international monetary unit for use in the postwar period; sponsored in the Keynes Plan. Compare Unitas.

battle-carrier. A new giant aircraft carrier of 45,000 tons, designed to carry twin-engined bomber planes.

planes.
bazooka. The U.S. Army Rocket Launcher A.T.
Model 1, so-called from resemblance to grotesque musical instrument exploited by radio
comedian Bob Burns. See MILITARY PROCRESS.
bangalore. A device for the clearing of land mine
fields by sympathetic detonation. It consists of a
length usually 20 feet, of cast iron pipe filled

length, usually 20 feet, of cast iron pipe filled with TNT which, when detonated, causes the explosion of all or most mines in the immediate neighborhood. Perhaps named for Bangalore, a town in India, where a similar device is said to have been used.

BBC. New official symbol for the chemical warfare tear gas brombenzyl cyanide, replacing CA.

biscuit gun. A tube-like, hand-operated lamp which concentrates variously colored signal flashes upon only those, as airplane pilots about to land, at whom the beams are aimed.

black-sand. Marine deposits in Coos County, Ore-

gon, containing chromium concentrates.

Black Widow. The P-61 night fighter plane. See
Aeronautics (page 8).

blister. A convex window protected by transparent material in the fuselage of an airplane that permits vision in all directions.

blue goose. An incendiary, .50-caliber machine gun bullet for use against enemy airplanes. Devel-oped for the U.S. Army Ordnance Department, it can penetrate thick armor plate, releasing on impact a secret chemical which generates flames of blast furnace temperature, exploding self-sealing gasoline tanks. So-called from the sky-blue tip which identifies it.

boil. Air Corps term for the small and often

cramped enclosure housing an airplane gun and

its gunner.

Bouncing Betty. A German booby trap in the form of a cylinder about 5 inches high and 4 inches across. Moderate pressure on any of the three detonator tubes drives the cylinder into the air, explodes the charge and disperses shrapnel in all directions. Also called the silent soldier. Big Inch. The 24-inch oil pipeline running from

Longview, Texas, to Phoenixville, Penn., a distance of 1,251 miles. Begun Aug. 3, 1942, and completed July 19, 1943, at a cost of about \$100,000,000, this pipeline, served by 26 pumping stations along the route, will deliver a capacity load of \$00,000 barrels of oil a day, equivalent to the capacity of 25,000 railroad tank cars.

Big Inch, Jr. Another oil pipeline, begun in the spring of 1943 and extending from the Houston-Beaumont oil area on the gulf coast to Linden, N.J. Estimated cost, \$75,000,000; rated capacity of the 20-inch pipe, 235,000 barrels of gasoline

Breda gun. An Italian machine gun, firing 6.55 and 7.35 mm. cartridges at an effective rate of 120 per minute (theoretical rate, 500 per minute). Air-cooled, 40 inches long, weight 231/2 lbs. with

bullis fever. An incapacitating malady of undetermined origin first reported among U.S. troops at Camp Bullis, near Fort Sam Houston, Texas. Believed to be associated with the bite of the Lone Star tick, the fever runs to severe head-

aches, low white blood cell count, loss of weight, and temperatures as high as 105.

**CAP.** The Civil Air Patrol, serving the U.S. home front, watching for and reporting submarines, delivering mail and emergency shipments, engaging in rescue work, etc.: a civilian organization operated chiefly by private plane owners. curgoliner. A large, strongly built airplane designed

to carry freight.

corryback. An authorization to a taxpayer to recompute past taxes by carrying back specified deductions; first included in U.S. Revenue Act of 1942.

cut cracker. A highly efficient method of cracking crude petroleum by the use of catalysts, substances which speed up difficult chemical reactions; used to increase production of high-octane gasoline.

celestial navigation trainer (C.N.T.). An elaborate ground apparatus for instructing a full airplane crew in the theory and practice of blind flying. Resembling the framework of a silo, it is equipped to reproduce all the illusions of flight in a stunted airplane body, including the appearance of the sky and the ground under all conditions, the effects of winds, clouds, and storms, etc. Developed by Edwin A. Link, Jr., inventor of the Link Trainer.

celluloid gipsy. An itinerant exhibitor of motion pictures, serving rural districts and small towns in

the American hinterland.

chapstick. A cylindrical stick of camphor and other protective chemicals; issued to American soldiers as a safeguard against chapped skin and sunburn.

CL. Official symbol for the chemical warfare agent,

cyanogen chloride.

- clavacin. A substance with medical possibilities resembling, but perhaps greater than, those associated with penicillin. It comes from a mold fungus, Aspergillus clavatus, which grows on stable manure, and is particularly active against certain bacteria. Also called *clavatin* by British
- claviformin. A crystalline antibacterial substance isolated from the mold fungus Penicillium claviforme by British workers. Shown to be identical with clavatin (called *clavacin* by American discoverers).
- coach-sleeper. A type of Pullman sleeping car in which the convertible berths are crosswise in-

stead of lengthwise, and in three tiers instead

combat correspondent. An accredited writer or journalist who accompanies troops in combat to re-

port the action.

compreg. Resin-impregnated sheets of wood, stacked together and bonded by pressure, under varying temperatures, to attain special properties of strength, density, toughness, and finish. Used in making airplane propellers, radio antennae masts, table tops, etc. See also *impreg*.

crash wagon. A motor truck operated as an emergency field unit for attending to crash landings from aircraft, fully equipped with first-aid and surgical supplies, radio and fire apparatus, all in charge of qualified personnel. Also crash truck.

critical components. Parts essential to the operation of vital war machines but which are hard to get, and thus delay completion of the machines.

crocodile soldier. A member of the Amphibious Command of the U.S. armed forces, trained and equipped for landing operations.

crotol. A brown dye made from rock lichens; de-

veloped by Irish chemists.
crypto-fascist. A person whose fascist sympathies are concealed, but expressed chiefly through covert opposition to all anti-fascist beliefs and

actions; especially, a clerical fascist.

Curzon line. The eastern boundary of Poland as proposed by George Nathaniel, Viscount Curzon, and accepted by the Supreme Council of the Allies, Dec. 8, 1919. It runs from Grodno in the north nearly due south to include Brest-Litovsh, thence down to Sakal and Pyzemysl, to the Carpathians.

cycle-welding. A process of joining sheet metal, either to metal or to rubber, wood, or plastics, by the use of a special cement, hydraulic clamps, and controlled methods of heating to the required temperatures. Developed by the Chrysler and Goodyear companies as an improvement over riveting or other welding methods. Also called cycoweld and cycle-weld adhesive process.

cutback. A sharp cut in the production of raw materials or manufactured goods, as for the armed services, due to a sudden or unforeseen lessening of demand. See Business Review. A cutback strike is a protest against reduction in the labor force caused by a cutback. See LABOR CONDITIONS.

cytochemistry. The science which treats of the physical and chemical organization of the living cell, and especially of the cytoplasm in distinction from the nucleus.

DDT. (From initials of the chemical name, dichlorodiphenyl-trichloroethane). An insecticide one of whose constituents is chloral hydrate (knockout drops). Introduced from Switzerland in 1942, it has been found effective against many insects by contact only and with no apparent damage either to man or to the plants and animals protected by it.

DE (destroyer escort). A U.S. Navy auxiliary vessel of about 1,300 tons, primarily designed and built to protect convoys from enemy submarines. See

NAVAL PROGRESS.

deck ankles. Term applied by British naval surgeons to stiff, swollen, and aching ankles caused by wearing gymnasium or other improper shocs on shipboard.

Demerol. A synthetic morphine substitute for the relief of pain, made by the Winthrop Chemical Co. Tests have shown it to be safer and less toxic than morphine, with lessened risk of addiction.

Diamaca. A comet first observed in Rumania in the early morning of Sept. 10, 1943, and independently on September 18 by the American amateur astronomer, Leslie C. Peltier. Named after its discoverer.

Diasone. A synthetic drug developed by the Abbott Laboratories, and deemed to be efficacious in the

treatment and cure of tuberculosis.

doorkey children. Children whose parents or guar-dians are absent from home all day, especially on war jobs, and who, though having their own keys, wander about the streets: also called defense work orphans.

dry run. Gunnery practice without live ammunition

or shells.

Dulag. Abbreviation for Durchgangslager (transient camp), any German camp for prisoners of war in transit.

Abbreviation for Durchgangsluftwaf-Dulagluft. felager (transient air-force camp), any German prison camp for enemy airmen in transit.

ellipsin. A complex protein of unknown structure and function isolated from the liver of guinea pigs; so named by the American anatomist, Dr. R. R. Bensley.

Escape Period. A 15-day period provided for in the National War Labor Board's standard maintenance of membership clause, during which an employee may withdraw from a specified trade union if he does not desire union membership as a condition of employment during the life of the contract.

ETOUSA. European Theater of Operations, U.S.

extender. A debasing ingredient to be mixed with a costly or highly prized food for the purpose of making a given quantity go further or last longer, as chick peas mixed with coffee. A war-time device brought in by food shortages and rationing.

Fita Fita. Native police officers in American Samoa who are enlisted men in the U.S. Marine Corps. flash freeze. A method for ultra-rapid artificial freezing of foods, developed by engineers in the University of Texas. Tests have shown a freezing time of less than five minutes, as compared with previous records of 30 minutes, without forma-

tion of ice crystals and destruction of cells.

flot top. An aircraft carrier. Flexol DOP. Trade name for a plasticizer material, used to soften plastics and give them flexibility.

Chemical name, ethyl-hexyl-phthalate.

Rightray. An electronic device for automatically keeping tab on a selected group of airplane instruments, providing the pilot with accurate coordinated flight information on such factors as direction, horizon, air speed, altitude, etc.: a project of the Sperry Gyroscope Co.

flight recorder. An electronic instrument that records automatically all significant data on the performance of an airplane, especially during a test flight; capable of 144 separate readings in about 3 minutes: developed by the Brown Instru-

ment Co.

fluid coal. Coal, pulyerized to dustlike fineness in specially designed mills, mixed with air to develop fluid characteristics, and forced through pipes for combustion in forging furnaces and other suitably constructed heating units.

Flux-Gate Compass. Trade name for an electromagnetic device which permits accurate air navigation in regions and under conditions unsuitable for the standard compass. Consists essentially of three double-wound electromagnets kept level with the earth's surface by a gyroscope, and generating currents whose fluctuations, on crossing lines of force, yield data for instant and precise determination of the position and course of an aircraft: developed by the Bendix Aviation Co.

folic acid. A member of the vitamin B complex, introduced and named by Dr. Roger J. Williams of the University of Texas; probably associated with the production of white blood cells and therefore important in the treatment of anemia,

especially as caused by sulfa drugs.

Formula 612. Provisional name for a powerful mosquito-repelling substance made entirely of synthetic materials by chemists of the New Jersey Agricultural Experiment Station. It was first used with effect by American forces in New Guinea and the Solomons. Chemical name, 2-ethyl-hexanediol-1, 3.

fumigacin. A substance obtained from a soil fungus known as Aspergillus fumigatus; effective against certain bacteria and of possible medical value.

fuze. Correct U.S. Army Ordnance spelling for the mechanical device that actually detonates the explosive charge in shells, bombs, mines, grenades, and the like. Fuse, by contrast, is a device, such as a powder train, for carrying fire to the explosive.

genonomy. The scientific investigation of the blood and family relationships among individuals of the same species, especially with regard to variations, hybrids, and other factors of importance in systematic biology. Term proposed as an alternative to biosystematics by Prof. Carl Ebling of the University of California.

geotechnology. The technology of all the mineral arts and sciences, from metallurgy to ceramics, with emphasis upon the improvement of old and the development of new methods, techniques, proc-

esses, and products.
"Geronimo!" The traditional cry of an American parachutist as he is about to jump from the plane. Attributed to Sergeant Charles Eberhard, one of the original members of the U.S. Army test parachute platoon formed shortly after invasion of Holland by the Nazis. Suggested by film of that name and first used by Eberhard in the sense of "On my way and all well!"

Gibson girl. A small portable radio transmitter for the use of airmen who are forced down at sea. It has an aerial and is equipped for sending an S.O.S. automatically in Morse Code: so named

from its hour-glass shape.

goumier. A member of one of the Algerian goums; a contingent of native Moroccan troops attached to and under the command of the French Army

in North Africa.

gray ghost. U.S. Air Corps name for the training plane in which the group commander gives a final check flight to candidates for full service. Rejections are as high as 96 per cent, hence the alternative name of "washing machine" for this plane.

greenbelt. A belt of rural land, which may be forested or developed as a park, surrounding a planned town and permanently safeguarded against undesirable incroachments. Hence, a greenbelt town, one providing shelter, services, stores, schools and other community facilities, especially one of three towns so laid out to demonstrate this type of community planning. GR-S. New symbol for Buna S type of synthetic

rubber.

Guadalcanal neurosis. An extreme form of nervous and mental shock as observed in the group of U.S. Marines who survived the costly Guadalcanal campaign. All the sufferers exhibited the symptoms of an intense, searing anxiety accompanied by a morbid fear of being thought cowards.

Guerin process. A method of using heavy rubber sheets or blankets to force sheet metal into contact with metal forms, thus reducing the cost of dies. Extensively used in the fabrication of air-plane parts. Developed in 1940 by Henry E. Guerin, of the Douglas Aircraft Co.

Gung Ho! Slogan of the Chinese Industrial Cooperatives, meaning "Work Together." Used also by American raiders operating in the Pacific area

under Lieut. Col. Evans Carlson.

handie-talkie. A compact, five-pound portable radio apparatus designed to carry in the hand and equipped for sending and receiving. See MILI-TARY PROGRESS.

heatronic molding. A method for subjecting certain types of plastics to high frequency radio waves in order to impart the uniform temperature necessary for quick and accurate molding into the required shapes, especially large ones like instrument panels, machine housings, and automobile bodies.

helicab. Proposed name for a small passenger airplane equipped with a helicopter and designed

as a flying taxicab.

Helicat. The Grumman F6F Navy fighter plane. See

Aeronautics (page 7).

Higgins boat. A small motorized naval transport. See NAVAL PROGRESS. HL. Official symbol for a mustard gas-lewisite chem-

ical warfare mixture.

HN. Official symbol for the chemical warfare agent, nitrogen mustard.

Hold-the-Line Order. Executive Order No. 9328, issued by the President on April 8, 1943, revising the grounds on which wage increases might be approved, as a further step to "hold the line" against inflation.

Hooligan's Navy. Humorous sobriquet given to the group of private yachts which, with their owners, crews, and assorted volunteers, were offered for

patrol duty off the Atlantic coast.

Hump, also Air Hump. That sector of the Air Transport Command's far eastern supply route which extends from Assam in India over the Himalayas to Yunnan in China. It crosses some of the most dangerous and unprotected terrain in the world, a distance of 500 miles with few or no landing

hydrolant. Contraction of the phrase "hydrographic message of the Atlantic," meaning a radio message in Morse code flashed by agents of the U.S. Hydrographic Office, to warn of dangers at sea and to give due notice of important changes af-

fecting marine service.

hydroxylin. A low-cost, general purpose lignin plastic with a cellulose filler, made from hardwood wastes treated with chemicals and available either as a fine molding powder or as laminating sheets, both of a glossy black color. Tough, lightweight, with high electrical resistance, this plastic is adapted for many uses, especially those formerly requiring rubber.

Ilag. Abbreviation for Interniertenlager, a German internment camp for civilians.

impreg. Thin layers of wood, impregnated with a water solution of resin-forming chemicals, then dried, cured, and bonded with resin glues. The resultant plywood is highly resistant to moisture,

fire, decay, and weathering. See compreg.
immunogenetics. The study of the phenomena of
immunity to disease as conditioned by and associated with the transmission of specific genetic

factors.

Incentive Plan. A plan to improve production by giving workers extra pay for extra work and output. Approved by the National War Labor Board provided the wage adjustments do not appreciably increase production costs, serve as a basis to raise prices, or prevent a justifiable price decrease.

industrial fire brigade. A group of men specially trained and equipped to handle fires in industrial plants; a war-time development. See FIRE

PROTECTION.

in-migrant. A person who has moved from one locality within the U.S. to another, primarily to engage in war work. A qualified in-migrant receives special consideration in respect to housing, so far as this is controlled by the National Housing Agency. The term in-migration is also used.

Interglossa. A proposed universal language, invented by the British scientist, Professor Lancelot Hog-ben. It is characterized by a relatively small vocabulary based chiefly on the Greek and Latin roots of scientific and technological terms, and by the absence of grammatical flexions.

internitis. Food poisoning, so called because of its frequency among those held in the civilian internment camp of Santo Tomas at Manila.

iron compuss. Railroad tracks: a term used by Amer-

ican airplane pilots who find them an aid on

cross-country flights.

isotel. A chemical compound which can replace another in the performance of a specified function or in the obtaining of a given effect. Proposed by Roger J. Williams on the analogy of isomer and with special reference to various members of vitamin complexes for which the term vitamer had already been suggested by Dr. Dean Bush and R. J. Wright, of the National Institute of Health.

jay-pee. A jet propelled airplane. See jet propulsion, jeep disease. The formation of painful cysts and sinuses at the base of the spine, due largely to excessive vibration and irritation. So called from its occurrence in drivers of jeeps and other military vehicles, but long known as pilonidal dis-

jet propulsion. A method of operating airplanes without propellers, by utilizing the well known reaction principle of a powerful jet of air or fuel gases continuously expelled from the engine un-der high pressure. Technical details of construc-tion, type of fuel, engine design, and performance not disclosed. Jet propulsion is not the same thing as rocket propulsion. [German type called Heissluftstrahltriebwerke—"hot-air raydrive works"] See AERONAUTICS.

Kalibapi. The Japanese totalitarian political party in the Philippines.

L. Symbol for the chemical warfare agent, lewisite,

replacing M-1. LCI. Official Navy designation for landing craftinfantry, any large ship designed for the transport of troops to invasion points. See NAVAL Progress.

Ledo Road. A road beginning in the Naga Hills district of Annam and running in an easterly direction along the southern slopes of the Himalayas, traversing some of the toughest jungle country in the world. It will eventually connect

with the Burma Road.

lescotite. A high grade bauxite, rich deposits of which have been discovered on the southern peninsula of Haiti. It has a very low percentage of silica and is a source of aluminum. Named after Elie Lescot, President of the Republic of Haiti.

LST (landing ship-tank). An auxiliary vessel of the U.S. Navy having in the bow two huge doors which open outwards to permit rapid disembarkation at invasion points of tanks, tank destroyers, heavy guns, and a full complement of men. See Naval Progress.

Leigh light. An intensely powerful searchlight first used on bombing planes of the British Coastal Command to permit the night spotting of enemy submarines when surfacing to recharge batteries, etc. Developed by Wing Commander H. De

V. Leigh.

- Little Steel Formula. A policy laid down by the National War Labor Board relative to the Little Steel cases (July 16, 1942). It concedes a rise in the cost of living of approximately 15 per cent above the January, 1941, level, and approves general wage increases up to 15 per cent of average straight line hourly earnings in January, 1941, for employees in a given bargaining unit who had not received increases up to that
- Luftlager. Abbreviation for Luftwaffelager (air-force camp), any German prison camp for enemy air-

M. New official symbol for the chemical warfare agent, mustard gas, replacing HS

- machine-shop mist. A fine vapor caused by the evaporation of the cooling oil applied to the edge of high-speed cutting tools. See HEATING AND VEN-TILATING
- Marlag. Abbreviation for Marinelager (marine camp), any German prison camp for enemy seamen.
- Marauder. The Martin B-26 medium bomber. See AERONAUTICS.
- Marvinol. Trade name for a vinyl-type plastic developed by chemists of the Glenn L. Martin Co. It is made from coal, salt, water, and air, and

can be used for making inner tubes.

MGB. Motor gun boat: a British auxiliary naval
vessel similar to the American PT boat.

micro-analyzer. An electronic device for the identification of extremely minute particles or portions of small objects, such as a virus or bacterium. It operates by measuring the specific losses in energy through the impact of a beam of electrons on the object, different losses indicating different types and amounts of the control of the different types and amounts of materials. Designed and built as an outgrowth of the electron microscope by Dr. James Hillier, of the R.C.A. Laboratories.

micro-inch. A unit of length, equal to one-millionth of an inch; used principally to indicate the depth of scratches, etc. in finished surfaces of metal, glass, etc. Not the same as *micron*, which is

one-millionth of a meter.

micromeritics. The science of fine particles; the study of the physicochemical properties and behavior of finely divided matter, with special reference to technical applications, as in soil physics, ceramics, atmospheric pollution, metallurgy, etc.

Milag. Abbreviation for Militaerlager, a German

prison camp for enemy soldiers.

milch cow. A German submarine designed to carry

fuel, torpedoes, and other supplies to combat craft at sea. See Naval Progress.

mission. The specific task of an airplane and its whether reconnaissance, observation, bombing, etc.: more comprehensive than raid. Compare sortie.

musette. A small traveling museum, especially one with exhibits of poisonous plants, harmful insects, or other material of value in the instruc-

tion of soldiers in army camps.

Mycoban. Trade name for a chemical which, added to bread dough, will protect the finished loaves against mold for several days, without impairing the taste.

native. For a legal definition of this term, as construed in 1943, see Law under War Decisions. Nebelwerfer. A German 6-barreled fog-thrower. See

NE steels. National Emergency steel alloys, developed to take the place of alloys requiring scarce

or unobtainable materials.

neurometer. A tuning fork of special design used to test the degree of responsiveness to a standard vibration, as an indication of fatigue and other nervous conditions. Developed by Maj. Aaron Roth, U.S. Army, as a test for fatigue in airplane

Nissen hut. A portable structure U-shaped in cross section, consisting of T-ribs and corrugated iron sheets with an inside lining, and having a floor area ranging upward from 16 by 36 feet. Designed for the housing of troops and supplies in Iceland and other Atlantic bases; originally made by the Nissen Co. of Great Britain, now used by the U.S. armed forces. See also Quonsett hut.

Northover projector. A small-caliber, breech-loading grenade-thrower developed by the British early in the war as an anti-tank weapon. A lightweight unit, with an effective range of about 200 yards, it can throw several types of grenade.

Notatum. Trade name of a selected strain of the penicillin mold, Penicillium notatum, developed by the Therapeutic Research Corporation.

oc. Official symbol for the chemical warfare agent,

hydrogen cyanide.

octofollin. A sex hormone reported to give beneficial results to women past middle age who suffer from the diminishing supply of the natural hormone. Chemically synthesized by workers at the Schieffelin Laboratories.

Oflag. Abbreviation for Offizierslager, a permanent German camp for prisoners of war of officer rank. onchocerciasis. A tropical disease caused by a para-

sitic nematode worm transmitted to man by the sting of the black gnat or buffalo gnat. It is endemic in Guatemala, where, in addition to the usual rheumatic symptoms, tumors, and skin dis-

orders, it may result in blindness.

Otto list. The list of French authors whose writings are forbidden by the Nazis. See French Litera-

Oxford unit. That amount of penicillin which, as compared with an arbitrary standard, completely inhibits the growth of a test strain of a specified micro-organism, usually Staphylococcus aureus.

paleopedology. The study of fossil soils; a term introduced by Prof. C. C. Nikiforoff, of the U.S. Department of Agriculture to denote the investigation and analysis of ancient soils, especially in relation to early and extinct forms of life.

pancake. A type of Diesel engine having its cylinders

arranged one above the other, pancake-fashion,

as in a recent type of submarine chaser.

papereg. Sheets of paper impregnated with resins and bonded under heat and pressure to give a plastic-like material of high tensile strength, stability, and resistance to moisture. It has been proposed as a substitute for aluminum in aircraft construction.

paragraph troops. Derisive sobriquet given to Army officers assigned to desk- and paper-work in

pararaft. A one-man collapsible rubber boat for use by airmen when downed over water. It is inflated from a supply of compressed air and carries paddles, sail, food, first-aid and repair kits, sea-marker chemicals, etc.

pathfinder. An airplane assigned to fly ahead of the main body of bombers, in order to illuminate the target by dropping special flares of variable

patulin. An antibacterial substance obtained by British workers from the mold fungus *Penicil*lium patulin. It resembles clavacin in physical and chemical properties and is under investigation as a new drug.

PD. Official symbol for the chemical warfare agent,

diphenyl chloride.

penicillin B. A substance extracted from the mold fungus which yields penicillin. First isolated by chemists at St. Louis University, and so powerful that it will affect bacteria in a dilution of

one part to one billion.

perspective map. A pictorial map specially designed and projected for high altitude precision bombing by members of the USAAF. Printed in four colors and on a large scale, the central map shows all significant features of the terrain drawn on an oblique angle; surrounding it are perspective drawings of the encircled target area, each representing a different approach as seen both by the navigator and the bombardier at specified vertical and horizontal distances.

phosphorescent microscope. An optical microscope which utilizes the phosphorescence developed in certain substances and materials on exposure to ultraviolet light. Devised by Drs. E. N. Harvey and A. M. Chase of Princeton University.

phthalonitrile. An insecticide developed as a substitute for lead arsenate in the control of truckcrop and garden insects, as the tobacco flea beetle and the hornworm.

phytoncide. A highly volatile substance of unknown chemical composition, emitted by the freshly prepared paste of onions, garlic, and certain other plants. Discovered and so named by Dr. B. Tokin, of the experimental research laboratories of the Tomsk State University, R.S.F.S.R., it has been under investigation as a strong bactericidal substance in the treatment of infected wounds.

piat. A British antitank weapon, so called from the initials of its official name, Projector Infantry Anti-Tank. It consists essentially of a lightweight steel tube enclosing a coiled spring which on release thrusts a rod against the cartridge in the tail of a 2¾ lb. bomb, projecting it with a force sufficient to pierce 4 inches of armor at 100 yards. Weight of the projector, 33 lbs. First used by British and Canadian troops in

pluvio-chronograph. An instrument for automatically recording the exact hour when it rains or snows, consisting of a series of 24 smoked glass plates, set along the rim of a disc which exposes a fresh plate every hour. Developed at the Penn-

sylvania State College by Dr. H. H. Neuberger. pony edition. Small sized edition of a regular magazine printed for and distributed by the U.S. Army Special Services Division, for members of the armed services overseas. Usual format, 6 x 9 inches.

portal-to-portal pay. Compensation for the time spent by a miner in underground travel to and from

his working place.

precision target. A comparatively small but important bombing target, usually for day-flying military planes with medium bomb loads, selected for total demolition of a specific object, as a drydock, power plant, railway terminal, bridge, etc.

pressure cabin. The sealed cabin or cockpit of an airplane, into which atmospheric air is forced from compressors to eliminate the need for individual pressure suits or oxygen tanks at high altitude. Also the verb pressurize and the noun pressurization. See AERONAUTICS.

Primacord. Trade name for a detonating fuse consisting of a waterproof textile tube filled with pentaerythritol tetranitrate (PETN); because of its safety in handling and its high velocities it is used for detonating land mines and for other

military purposes.

psychodietetics. The study of the many complex interrelationships between food, eating, and mental processes, with special reference to the health of individuals and groups. The sciences of nutrition and psychology considered as a unit.

PT boot (patrol torpedo boat). A small, compact, rugged, highly maneuverable vessel for engaging the enemy in patrol actions. It is equipped with two torpedo tubes and a supply of depth charges; powered by three 1,300 h.p. airplane motors, developing a speed of 40 knots or more. Similar boats in England are called motor torpedo boats (MTB).

Quonsett hut. An American modification of the Nissen hut, designed for use in the South Pacific as well as in Alaska, the Aleutians, and Atlantic bases of the Army and Navy. Used mostly for hospital and recreation purposes, it has a special masonite lining, insulation, plywood floor, electric lighting, and ventilation. Size: 20 by 56 feet.

R.D.X. (Research Department, formula X), a powerful high explosive used by the British and American armed forces. Perfected in England in the summer of 1936 by Commander P. A. M. Long, and a scientist, who with three others lost their lives in the final stages of the work.

radionics. Term proposed as an alternative to, or substitute for, electronics. It embraces the study of the properties of electromagnetic radiations and charged particles, with particular reference to practical applications, as in radio, radar, television, x-rays, vacuum tubes, and in all other fields which utilize the controlled activity of electrons and ions.

Renshaw system. A method for visual education developed by Dr. S. Renshaw. It consists in projecting images on a screen for a specified time, the intervals being progressively diminished until completion of the course. As used in aircraft or ship recognition, it is intended to enable the student to identify any type of craft in 1/15th of a second. See Photography.

resuscitor. A modified form of pulmotor recently introduced for the treatment of carbon monoxide poisoning or other forms of asphyxia. Has been strongly criticized on technical and physiological grounds by Prof. Yandell Henderson of Yale.

SA. Official symbol for the chemical warfare agent,

sawdust dye. Any of a group of water-soluble dyes made from waste sawdust heated with sulfur and caustic soda: said to rival coal-tar dyes in color and brilliance.

screening. In the psychiatric treatment of large groups of individuals, as army and navy inductees, the process of weeding out all those whose condition is such as positively indicates physical or mental breakdown, or failure to adjust them-selves to the responsibilities of military or other exacting service. Also as a verb, to screen.

Seabee (from C.B., abbreviation of Construction Battalion). A member of the Battalion organized in 1942 by the Bureau of Yards and Docks of the Navy for handling urgent and dangerous construction jobs, especially in battle areas. Present strength of the Seabees, over 200,000 officers and

men.

second-injury fund. A State-authorized fund for meeting the additional cost to employers of the permanent disability of workers resulting from second injuries. Designed to encourage the em-

ployment of physically handicapped persons.

service bank. A bank specially organized and
equipped to handle the money problems of
American servicemen at home or overseas. Located wherever convenient—usually as a branch of a large banking house—the banks accept deposits, cash checks, make loans, and otherwise aid in the finances of soldiers, sailors, and ma-

shipyard eye. Popular name for kerato-conjunctivitis, a highly contagious disease of the eye noted among workers in shipyards and factories. The cause may be a virus which inflames the cornea

and conjunctiva of the eye.

sketchmaster. An instrument operating on the camera lucida principle, used to produce a vertical image of a photograph on a map from which delineated detail can be traced directly. See Photography.

smoke float. A chemically activated, portable smokescreen device which lays a dense cloud of smoke over the surface of water, and sinks without trace; used by the U.S. Navy.

sortie. A flight of an airplane on a military mission.

See Mission.

spigot mortar. A British mortar with a low trajectory, operating on the same principle as the German Granatenwerfer (grenade thrower). It fires a 20lb. anti-tank shell or a 14-lb. anti-personnel bomb, without a pronounced flash and at an effective range of from 150 to 400 yards.

split run. Dividing a newspaper display ad into two equal parts, each part printed in half of the total run of the edition contracted for: a war-time method for conserving newsprint heretofore used

only for testing advertising copy.

staging area. The point of embarkation of troops en route to combat areas. In psychiatry, it serves as a final pre-combat test of the stamina of the soldier and provides an index of the effectiveness of the earlier screening process.

Stalag. Abbreviation for Stammlager (base camp), a permanent German camp for prisoners of war, especially non-commissioned officers and pri-

vates, or for labor detachments.

Sten gun. A light-weight, rapid-fire British subma-chine gun designed after Dunkirk by two Englishmen who named it from the initials of their last names (Sheppard and Turpin) plus the first two letters of ENgland. Uses 9 mm (.35 cal.) Parabellum cartridges and enemy cartridges of same size and length; weighs less than 10 lbs.

fully loaded; fires 550-600 shots a minute at effective range of 200 yards; has an overall length of 30-35 inches; is tough, versatile, extremely simple, and in mass production costs from \$10 to \$20 per piece.

sulfallantoin. A recent member of the sulfa drug family, reported to be efficacious in the treatment of wounds, compound fractures, burns, ulcers, and certain infections of the eye, ear, nose, and

throat.

sulfamerazine. A recent sulfa drug considered to have advantages over sulfamethazine in the treatment of pneumococcus infection by oral administration.

Syrette. Trade name for a miniature syringe; especially, a small disposable tube for the emergency administration of morphine, as on the battlefield.

task force. A tactical military unit consisting of elements drawn from different branches of the armed services and assigned to execute a specified mission.

tectonophysics. A branch of geophysics which deals with the forces causing movement in, and deformation of, the earth's crust, especially the flow and rupture of earth features due to earthquakes, volcanos, submarine upheavals, etc.

thioestrone. A sulfur compound of the sex hormone estrone; synthesized by Dr. W. A. Malisoff and Eda Malisoff.

thiouracil. One of a group of sulfur-containing organic compounds which has been experimentally effective in the treatment of hyperthyroidism or goiter. Another member of the group, thiourea, long known to chemists, has been similarly tried.

tracer cutback. An optical illusion which leads inexperienced airplane gunners to misinterpret the actual course and direction of a stream of tracer bullets from their guns, thus reducing the ac-

curacy of fire

Tri-Metrogon. A high-speed system of aerial mapping first used in the summer of 1941 by two American specialists, Col. M. H. Kaye and G. Fitz Gerald. The plane carries a unit of three wide-angle cameras of six-inch focal length, one camera vertical, the other two at matching oblique angles. Each exposure covers a six-mile strip from horizon to horizon, and as much as 20,000 square miles can be photographed in less than half a day. See PHOTOGRAPHY.

triphibian. Word coined by Prime Minister Winston Churchill to describe a joint military, naval, and air operation, co-ordinating all arms of the service and all weapons in a simultaneous action. The

term triphibious was previously coined by George

Fielding Eliot for the same meaning.

triptone. A hydrocarbon of the methane series, known to chemists as 2,2,3-trimethyl butane. Recently developed by industrial chemists as a powerful, high-octane aviation fuel about 50 per cent more efficient than the best gasoline now used.

turbosupercharger. A compact, highly effective supercharging device for the engines of airplanes operating at altitudes upwards of 25,000 feet. It drives the air-compressor supplying the engine by means of a turbine which utilizes exhaust gases having temperatures as high as 1,700° F. even in an atmosphere of 100° below zero.

Unitas. Proposed name for an American unit of international monetary value for use among participating nations in the postwar period. Devised by Harry D. White, a research specialist of the U.S. Treasury.

Uralloy. A plastic material made by treating green wood with a solution of urea, drying, and shaping the product under heat. By adding a resin-forming chemical and modifying the treatment, a heat-resisting variety may be obtained.

Victory edition. An edition of an American daily newspaper cut to eight or ten pages to conserve paper. Usually issued on Mondays or Saturdays.

Valley fever. Popular name for a disease, also called in California the San Joaquin fever and technically known as primary pulmonary coccidioidomycosis, caused by inhaling the spores of a certain fungus. Its effects—chest pains, chills, fever, and coughing—have interfered with troop maneuvers on the West coast.

Vansitiantism. The doctrine that the entire German people share the responsibility for militarism, aggression, and war equally with the Nazi regime, and should be treated after the war on this assumption. Associated with the expressed views of Lord Robert Vansittart, former Permanent Under-Secretary of the British Foreign Office.

V-disk. A phonograph record made especially for the entertainment and recreation of American troops. Developed by Capt. Robert Vincent for the Music Section of the Special Services Division, with the cooperation of manufacturers and artists.

Vestibule center. An occupational and vocational guidance center for assisting in the effective return to civilian life of the men to be demobilized after the war. It forms a part of the large-scale rehabilitation program worked out by Carl A. Gray, former Connecticut State Director of the

W.P.B. and originator of the "Connecticut Plan" for job training.

Vibeston. Trade name for a new, light-weight sound insulator made of asbestos and other non-strategic materials by the U.S. Rubber Co. It is 50 per cent lighter than mica and effectively decreases noise and vibration.

Victory ship. A fast cargo ship of the American merchant marine, superior in design and performance to the former Liberty ships. See Shipbullding.

Vitamer. Any of a group of compounds which act more or less as a unit to produce a given physiological effect, especially in relation to vitamins. See isotel.

VT loans. Government guaranteed bank loans to war contractors. See Banks and Banking.

Walkie-talkie. A high-powered portable radio set, including both transmitter and receiver, which can be carried and used by one man. See MILITARY PROGRESS.

Warshipopencargo. A special form of open cargo war risk insurance. See Shipping.

white noise. Nerve-racking and objectionable noise caused by the indiscriminate mixing of all sound frequencies into one continuous assault on the ears, as in an airplane: so named on the analogy of white light (a mixture of all wave lengths).

of white light (a mixture of all wave lengths). Winnie. A bronze figure sculptured by Malvina Hoffman, instituted as a fashion award for American designers in 1943. See Fashion Events.

yellowhead. A United States currency note originally issued for use in Sicily; it is imprinted with a yellow seal carrying the name of the place of circulation.

- 1. Jan. 23—British take Tripoli.
- 2. Feb. 2—German resistance ended at Stalingrad.
- 3. Feb. 24—Bombing of Wilhelmshaven opens "round-the-clock" Allied attacks on Germany.
- 4. May 7—Allies take Tunis and Bizerte, ending Battle of Africa.
- 5. July 10-Allies invade Sicily.
- 6. July 12-Russians open summer offensive.
- 7. Aug. 15—Americans retake Kiska.

- 8. Aug. 25—Mountbatten appointed commander of Southeastern Asia.
- 9. Sept. 3—British land in Italy.
- 10. Nov. 21—Americans invade Gilbert Islands.
- 11. Nov. 28-Dec. 1-Tehran meeting maps Allied strategy.
- 12. Dec. 9—Chinese recapture Changteh.
- 13. Dec. 16—Allied forces land on New Britain.
- 14. Dec. 26—British sink the Scharnhorst.
- 15. Dec. 30—Russians win Battle of the Kiev bulge.
